A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London, at their Works, Wates, head-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the absolute advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Lathe, Slates, and Slate Slabs, Fire-bricks Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME for its natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf walls, docks, &c and for concrete, it is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods
ROMAN, PORTLAND, PARIAN, ANSTON, and L'AS Cements of the best quality.
SQUOINS, PAVIORS' STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

GROUND ABERTHAW LIME (for Hydraulic Works). Blue Lias Cement, Cambrian Plaster, Caustic Flour of Lime (for Agricultural and Gardening purposes), and Cambrian Cement, shipped at Cardiff, in barrels, to all parts of the world, or forwarded by railway direct out of the works, in sacks or barrels, to any part of the kingdom.—JAMES BIRD and CO. Cambrian Cement Works, Cardiff.

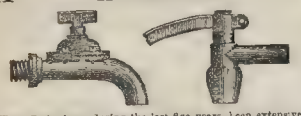
ELECTRIC COLOURS.—The ELECTRIC POWER LIGHT and COLOUR COMPANY is prepared to supply electric colours generally with the requisite quality and lowness of price are manufactured. Samples of the Colours may be seen at the Offices of the Company, No. 31, Pall-mall.—Address, H. PROSSER, Esq. Commercial Manager, Frogmore lane, Wandsworth, Surrey.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the Stone and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 20, 30, 40, and 120 gallons per hour, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfied. Supplied in quantities up to 50 gallons per hour, may be obtained on application at the depot, 71, Baker-street, Portman square, London.

LADDERS, BARROWS, &c. for SALE or HIRE. G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of ladders, excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.
Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 330 feet; their efficiency and durability by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

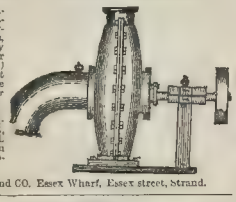
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.



The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 12in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold) to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES,

mounted on strong wagon-wheels, iron chimney horse shoes complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired as a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

JAMES MICHIE, Engineer, Battersea-park,

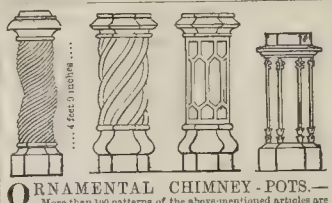
Zinc Plate, Manufacturer of all kinds of STEAM-ENGINES (portable and Stationary), Pumps, Sawing Machines, Cranes, Crabs, &c.

N.B. Several High-Pressure Engines for Sale.

STEAM BOILERS of every description,

Wrought-iron Girder Bridges, Gas-holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Tividale, near Dudley. London Office, 73 Hatton-garden.

STEAM BOILER for SALE, 12-horse



power high-pressure, spherical ends, 17 feet 8 inches long, 4 feet diameter, with all the necessary steam fittings, comprising two safety valves, a steam stop-valve, Holme's patent whistle and float, blow through and blow off valves, man-hole, cover, bolts, &c. all complete; has lately been proved to 160 pounds to the square inch, and is only required to be replaced with a much larger boiler. Price Forty-five Guineas, delivered in London. Apply to Messrs. H. and M. D. GRISSELL, Regent's-canal Ironworks, near City-road, London.

FOR WATERING GARDENS, DISTRICTS, LIQUID MANURE, &c. JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER PIPING is now manufactured especially for the above purposes, and is of greater durability than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water-works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, showers, roses, and jets complete. Vulcanized India-rubber steam pipes for pumps, any length or size, to order; Hose for fire engines, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for SELL'S and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass doors, sashes, frames, &c. Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

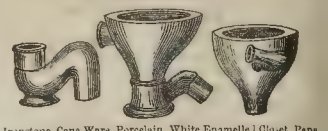
FRENCH POLISHING.—T. CHOWLES,

French Polisher, &c. Warren mews, Fitzroy square. Builders' work estimated for and done on the shortest notice. Houses of furniture contracted for and done by the year. Country orders executed with despatch. Orders by post punctually attended to.

LAMBETH STONE POTTERIES.—TO BE SOLD, a POTTERY BUSINESS, situate in High-street, Lambeth, in good working order, and offering an excellent opportunity for investment in this lucrative trade.—For particulars, apply to Mr. W. J. LOAT, Church buildings, Clapham-common, Surrey.

ORNAMENTAL CHIMNEY-POTS.—

More than 100 patterns of the above-mentioned articles are manufactured in artificial stone by J. SEELEY, at Austin and Seeley's Artificial Stone Works, 1 to 4, Keppel-row, New-road.



MILL WALL POTTERY (near Scott Russell's).

Messrs. WILLCOX and CO invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—For sea fare forwarding information.

A. ALLEN, 24 Wharf, Harrow-road,

Paddington, Manufacturer of Glazed Stone Ware Drain Pipes, Syphons, Bends, Junctions, Closet Pans, &c.—Manufactory, Warmley, near Bristol. All applications to be made to A. ALLEN, 24 Wharf, Paddington.

J. TURNER, Pottery, 2, South Wharf, Praed-street, Paddington.

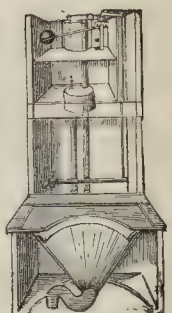
Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Fenchurch-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hoppers and other Pans, with best White Glaze inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

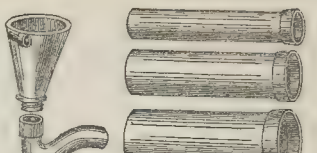
Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1833.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability are universally admitted, while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford street.

Drawings and List of Prices will be forwarded free on application.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,

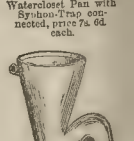
MANUFACTURER OF

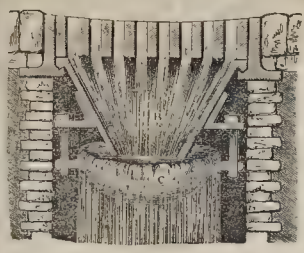
GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY,

COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.





A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2 FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

JENNINGS'S PATENT GULLY-TRAPS.

THESE TRAPS are applicable to the SMALLEST SINK, or most PUBLIC ROADWAY, as also for STABLES, AREAS, &c. They are in use at the Brewery Stables of Messrs. Elliott and Watney, Messrs. Hodges and Co., the Distillers; Messrs. Truman, Hanbury, and Co., Bank of England, Dissecting Rooms of the London Hospital, Institute of Engineers, &c. References to several Towns can be given where they have for Twelve months acted most satisfactorily.

JENNINGS'S IMPERISHABLE CLOSETS, URINALS, AND LAVATORIES.

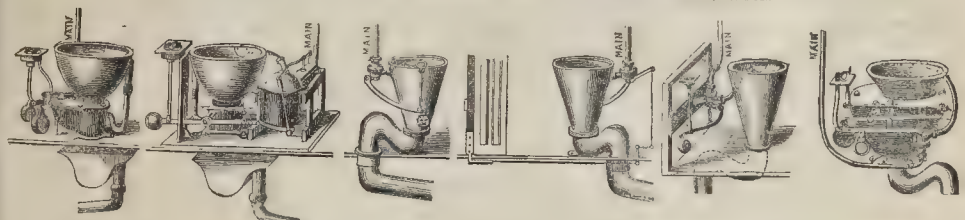
VISITORS to the CRYSTAL PALACE are invited to inspect GEORGE JENNINGS'S Sanitary Arrangements.

JENNINGS'S PATENT DRAIN PIPES.

ARRANGEMENTS are now making to establish Depôts in different parts of London, and in every Town in the United Kingdom. As no extra charge will be made for these Pipes, above that now charged by respectable manufacturers FOR THE OLD-FASHIONED SOCKET PIPES, the Patentee solicits the patronage of Engineers, Architects, and Builders.

JENNINGS'S PATENT SHOP-SHUTTER SHOES

Shoe, and secure, Shop Shutters at HALF THE COST of the troublesome and destructive shutter-bar.



A Book containing illustrations, descriptions, and prices of Jennings's various Sanitary Inventions can be had on application, or by post, if two stamps are inclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
No. 29, Great Charlotte-street, Blackfriars-road, London.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON.

No. 1. No. 2. No. 4. No. 5. No. 6 No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 3*l.* 4*s.*
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 3*l.* 10*s.*
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat cross handle, 3*l.* 12*s.* 6*d.* With Blue Basin and sunk opal handle, 3*l.* 3*s.* extra, 4*s.* 6*d.*
No. 4.—J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast iron trap, 1*l.* 13*s.* Enamelled Iron Trap, Extra for Enamelled Iron Trap, 4*s.* 6*d.*
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast-iron trap, and door action, 1*l.* 13*s.* This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2*l.* 3*s.* Enamelled Iron Trap, 4*s.* 6*d.* extra.
No. 6.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL VALVE. This Valve is particularly short in its action. 1-inch Valve, with sunk handle, 14*s.* 6*d.*

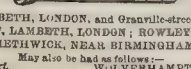
ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.
J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

STONE WARE PIPES, BENDS, JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES.



May also be had as follows:—

LIVERPOOL.—STORES, 70, SOHO STREET, LIVERPOOL.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7*s.* 6*d.* each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1*s.* 3*d.* each extra.

PATTEN'S PATENT HIGH-PRESSURE

WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, crank, wire, lead trap, &c. Any number of Closets can be supplied from one main. Also PATTEN'S Improved Powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 2*l.* 8*s.* and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St. Paul's, London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES,

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, Fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

HAYES, BROUGH, and CO.

Works: Llwynenion, near Wrexham.
Offices: 11, James-street, Liverpool.
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the disadvantage of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's Park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, N.—6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

THE BUILDER.

SALES BY AUCTION.

TO IRONFOUNDERS, ENGINEERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on the PREMISES, 9, Osborn-street, on FRIDAY, AUGUST 4, at ELEVEN, by order of the mortgagees, a spacious, light, and lofty IRONFOUNDRY, with smaller shop and turnery over, store-IRONFOUNDRY, with smaller shop and turnery over, store-rooms, stabling, large yard, counting-house, and comfortable dwelling-house: Held for a term of twenty-four years at a rent duly reserved. To be viewed by the public, and particulars had on the Premises; of Messrs. Pearse and Chamberlain, 24, Lincoln's-inn-fields; of Messrs. Lewis and Mason, Solicitors, 30, Basinghall-street; and of Messrs. Fuller and Horsey, 13, Billiter-street, City.

TO IRONFOUNDERS, GAS ENGINEERS, AND OTHERS. By

MESSRS. FULLER and HORSEY, on FRIDAY, AUGUST 4 at ELEVEN, on the PREMISES, 9, Osborn-street, Whitechapel, by direct instruction of the Executors of and A. Standing, PLANT, Tools, and MACHINERY of a FOUNDRY, four cupolas, fan blowing machine, crane shank, and FOUNDRY, four cupolas, fan blowing machine, crane shank, and fan blowers, powerful 10 inch gyrating, bittmas of stove, stove bricks,

Tenders, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. Wimbridge Estate," to be sent on or before FOUR o'clock on MONDAY, AUGUST 14, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. Wimbridge Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, August 3, 1854.

TO BUILDERS

TENDERS are required for the ERECTION of a VILLA RESIDENCE at Kent Town, East Moulsey, Surrey. The plans and specification may be seen at the Office of Mr. J. P. PALMER, Architect &c. 4, Serle-street, Lincoln's-inn, between the hours of ELEVEN and FOUR on MONDAY, WEDNESDAY, and FRIDAY next. The lowest Tender will not necessarily be accepted. The quantities supplied on the usual terms. The Tenders are required on or before WEDNESDAY, AUGUST 16.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of FOUR VILLAS, on the St. Margaret's Estate, near Twickenham, may inspect the drawings, at the Offices of the Architect, on and after MONDAY, AUGUST 7th next. The Architect does not bind himself to accept the lowest or any Tender.

GEORGE MORGAN, Architect, 3, Chancery-lane.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE WORKS.—Sealed Tenders for CONSTRUCTING a BASIN and an EMBANKMENT at BULL POINT, near Devonport, will be received at the Ordnance Office, Pall-mall, London, on or before the 8th day of AUGUST, 1854, at NOON, and addressed "To the Secretary to the Board of Ordnance," and indorsed "Tender for Works at Bull Point." Detailed plans may be seen, and specifications, form of Tender, and all other necessary information obtained, at the Royal Engineer Office, Bull Point, between the hours of NINE and FOUR, daily, from the 24th of JULY to the 15th of AUGUST next, Sundays excepted.

Royal Engineer Office, Devonport, 19th July, 1854.

BUTE DOCKS, CARDIFF.—To EXCAVATORS and CONTRACTORS for PUBLIC WORKS.—Notice is hereby given, that the Trustees of the Marquis of Bute are prepared to receive TENDERS for the EXCAVATION of a NEW TIDAL DOCK, and the formation of a BREAKWATER to protect the same on the east side of the entrance of the present Docks. The plans, specification, and quantities may be seen and inspected, at the Office of JOHN FLEWS, Esq. C.E. at the Bute Docks, Cardiff. Sealed Tenders addressed to the Trustees of the Marquis of Bute, and endorsed "Tender for Tidal Dock and Breakwater," must be delivered at the Dock Office on or before WEDNESDAY, the 16th day of AUGUST. The Trustees do not bind themselves to accept the lowest Tender.

ROTHERHAM WATER-WORKS.—The Rotherham and Kimberworth Local Board of Health are prepared to receive TENDERS from competent persons for the execution of the several works required in Contract No. 1, namely, the ERECTION of an ENGINE and BOILER HOUSE, and Engineman's Cottage, and a Boundary Fence. Duplicate copies of the drawings and specification may be seen, and forms of Tender (on which only they can be obtained) at the Office, and at the Offices of the Engineers, Messrs. LEE and STEVENSON, 7, Duke-street, Westminster, on or after MONDAY, the 31st inst. and sealed Tenders must be sent in to me on or before TUESDAY, the 8th day of AUGUST next ensuing.

By order of the Board,
Rotherham, July 26, 1854. J. BARRAS, Clerk.

LUTON LOCAL BOARD OF HEALTH.—Persons desirous of delivering TENDERS for upwards of 1 and laying about 3 miles of 15 inch and 700 feet of 12 inch SEWER PIPE, with the necessary gully, trapped branch drains, manholes, and ventilating and laying about 1600 feet super of 24 YORK PAVING, with curb, and granite water tables, may meet the Board and specifications at the Office of Mr. T. D. EVANS, Surveyor to the Board. The Tenders to be delivered on TUESDAY, the 15th instant.

GEORGE BAILEY, Clerk.

TO EXCAVATORS

SEALED TENDERS for a SPECIFIC SUM, will be received at the Ordnance Office, Pall-mall, London, up to noon the 14th AUGUST next, for the EXCAVATION and REMOVAL of certain BOULDERS of SLATE ROCK, EARTH, &c. from the Devonport Lines, in the immediate neighbourhood of the Saltash entrance. The detailed plan may be seen, a Specification of contract, together with every requisite information, may be obtained daily (Sundays excepted) at the Royal Engineer Office, Devonport, between the hours of TEN and FOUR o'clock, from the 7th to the 26th of AUGUST next, both days inclusive.

Royal Engineer Office, Devonport, July 28, 1854.

TO BUILDERS

PERSONS desirous of TENDERING for the ERECTION of a MASTER'S and MISTRESS'S HOUSE to the schools at Peters, Surrey, can see the plans and receive forms at the office of Mr. B. FERREY, 1, Tenter-place, Pharing-cross, where the Tenders are to be delivered before SATURDAY, the 5th AUGUST. The Committee do not bind themselves to accept the lowest Tender.

MODEL DWELLINGS, DUDLEY.—The Dudley District Committee of the Metropolitan Association for improving the Dwellings of the Industrious Classes are desirous of receiving TENDERS for the FIRST BLOCK of their PROPOSED DWELLINGS in the LOCK LANE, Dudley. Plans and specifications may be seen, together with a copy of the contract, at the Head-Office, 19, Coleman-street, City, London, and at the Office of Mr. W. WIGGINTON, Castle-street, Dudley, the Architect of the Branch Association, on and after MONDAY, the 31st instant. Tenders to be forwarded to the Committee, under cover, to the Secretary, not later than the 14th of AUGUST. The Committee do not pledge themselves to accept the lowest or any Tender. By order of the Local Committee.

Dudley, July 26, 1854. W. BARNS, Local Secretary.

TO BUILDERS

PERSONS willing to TENDER for the ERECTION of a VILLA RESIDENCE, at Sydenham, Kent, may inspect the plans and specification at the Offices of Mr. R. J. WOODCOCK, Architect and Surveyor, Adelaide chambers, Gracechurch-street. Sealed Tenders to be delivered on or before MONDAY, the 14th August. The proprietor reserves to himself the right of refusing the lowest or any other Tender.

UTTOXETER, Staffordshire.—To Builders and Others.—Persons desirous of CONTRACTING for the ERECTION of a NATIONAL SCHOOL and MASTER'S HOUSE, may inspect the plans and specification, on application to Mr. THOMAS BRADLEY, Architect, Uttoxeter. Sealed Tenders, endorsed "Tender for Building Bradley Mount National School," must be sent in not later than SATURDAY, AUGUST 12, addressed to the Rev. HENRY ABUD, Vicarage, Uttoxeter.

TO BUILDERS

PERSONS desirous of TENDERING for the COMPLETION of TEN HOUSES, at Peckham, may inspect the plans and specification, at the Office of Mr. DAY, the Architect, 74, Coleman-street, City. The proprietor does not bind himself to accept the lowest or any of the Tenders.

CONTRACTS.

TO BUILDERS

PERSONS desirous of TENDERING for the ERECTION of a PARSONAGE HOUSE and Outbuildings, at Leeds near Maidstone, can see the plans and specification of the proposed works at the office of Mr. MARTIN BULMER, Architect, Maidstone. Sealed Tenders, endorsed "Tender for Parsonage House, Leeds," are to be delivered at the above Office on or before WEDNESDAY, AUGUST 16th. The lowest Tender will not be accepted unless it is satisfactory in every respect, and deposits for the due performance of the works will be required. Maidstone, July 29th, 1854.

BUILDING LAND at CROYDON and at NEW CROSS.—TO BE LET, by TENDER, for a term of years, a Plot or Piece of Land, well adapted for building private houses or shops, situate in the high road from London to Croydon, opposite the Croydon Railway Station, and having the Farm and House in part in use, having a frontage of 126 feet facing the high road, and a frontage of 131 feet facing the road leading from the high road to Broad Green road. Also a plot or piece of Land at New Cross, Surrey, adjoining the Railway Tavern, near the New Cross Station, having a frontage of 61 feet facing Hart's-lane, and a depth of 96 feet. Plans of the ground may be seen and further particulars of same (at the Offices of Messrs. VANDERCOM, CHILLCOTT, LAW, and COWEN, 24, Bucklersbury, London), to whom Tenders for both or either of the plots are to be delivered. Satisfactory references will be required before any agreement is entered into with any party to the same, and a security will be required for the due performance of the agreement. The Proprietor does not bind himself to accept the highest or any Tender.

TO BUILDERS AND OTHERS

TO BE LET, by TENDER, the BUILDING of several large HOUSES, on an estate near London. A part of the said Estate, one of the Lots, and built with Houses, may be viewed. Apply, for full particulars, to Mr. J. P. PATMAN, Architect and Surveyor, 4, Serjeant's-inn, Fleet-street, between the hours of Eleven and Four, on Mondays, Wednesdays, and Fridays.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and Others.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Sewers' Office, No. 1, Greek-street, Soho-square, on TUESDAY, the 15th day of AUGUST instant, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK SEWERS, 2 of 67 inch long, 1 of 54 inch, 1 of 42 inch, 1 of 36 inch, and 1 of 24 inch, with sets of Lateral and Communicating Drains, and all necessary Junctions, Inlets, and Manholes, in the several streets and Public Places in Upper Lambeth, Limehouse, and Wapping, in the county of Middlesex, and for the maintenance of the same in complete repair, for the ensuing twelve calendar months. Plans, sections, and specification of the above works, together with the form of Tender, may be inspected, and further information obtained, at the Principal Office of the Commission, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 14th instant. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted shall be required to enter into Contract for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated this 3rd Day of August, 1854.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and Others.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Sewers' Office, No. 1, Greek-street, Soho-square, on TUESDAY, the 15th day of AUGUST instant, at ELEVEN o'clock a.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, Gullies, and Junctions, with Lateral Drains, and all necessary Inlets, Manholes, and Lamps, in the several streets, courts, and places at Bethnal Green, Bow, Old Ford, Mile-end, Limehouse, Poplar, and Blackwall, in the county of Middlesex, and for the maintenance of the same in complete repair, for twelve calendar months. Plans, sections, and specification of the above works, and the form of Tender, may be inspected, and further information obtained, at the Principal Office of the Commission, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 14th instant. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted shall be required to enter into Contract for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated this 3rd day of August, 1854.

TO BUILDERS AND CONTRACTORS

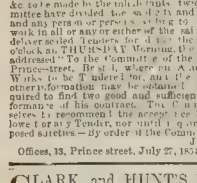
PERSONS desirous of TENDERING for the ERECTION of SCHOOLS, to contain 40 Boys and Girls, together with a Reading and Lecture Room; also several Houses, with other Buildings and Works, for RICHARD HARROW, Esq., may obtain further particulars on application to Mr. WATSON, at the Office of the Sewers Works, after MONDAY, 31st instant. No Tender can be entered into before SATURDAY, the 26th August next. Mr. HARROW does not pledge himself to accept the lowest or any Tender.

Stanley Works, near the Church, 19th July, 1854.

TO PLASTERERS

TO BE LET, by CONTRACT, SIXTEEN third-class HOUSES to PLASTER (labour only). None need tender who cannot find security to the amount. Apply to Mr. WILLIAM BLEASDALE, Railway Tavern, Tufnell Park, Middlesex.

[For remainder of Contracts see next page.



CONTRACTS.

BRISTOL LOCAL BOARD of HEALTH.—AMENDED SPECIFICATION for CLEANSING.—The Committee of the Bristol Local Board of Health hereby give Notice that they are ready to receive TENDERS for SWEEPING and CLEANSING, in the WAY HEREAFTER prescribed, such sweeping and cleansing to commence on Monday, the 25th SEPTEMBER next, the carriageways of all the streets, squares, courts of every description, yards, lanes, passages, and places within the city and parts of Bristol included in the Bristol Improvement Act, 1847, and the Bristol Improvement Act, 1850, and the roads, streets, and footpaths adjoining thereto, and also to be made by the inhabitants twice in each week. The Committee have divided the said streets and courts of the district into 4 sections, and any person or persons willing to contract for performing the work in all or any or either of the said divisions are requested to deliver sealed Tenders for doing the same, on or before 12 o'clock, on THURSDAY Morning, the 11th day of AUGUST next, addressed "To the Committee of the Local Board of Health," 3, Prince-street, Bristol, where the Amended Specification of the Works to be Undertaken, and the form of Tender, and such other information may be obtained. Each Tender will be required to find good and sufficient securities for the due performance of his contract. The Committee will not bind themselves to recommend the acceptance of the lowest, or any Tender, nor until inquiry and approval of the proposed sureties.—By order of the Committee,

JAMES HARRIS, Clerk

A gate of a ton weight moving with these hinges as easily as a wicket. Old-fashioned hinges, Latches, or Gravitating Springs, can be fitted with them, and can be removed and replaced in an instant. Registered Self-acting Spring Hinges, and superior Gate Fastenings, at moderate prices. None genuine unless marked "Charles Collinge," about, from both" Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, steer-carts, &c

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co's Wire Rope and Wire Fencing Works, Gateshead-on-Tyne, is confidently recommended as the most effective for park and farm inclosures, or sub-divisions, for temporary and permanent purposes (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other description of fencing. The Strands, or Wires, are first Galvanized, and then covered with a composition, which effectually preserves the metal from oxidation. The Fence is now in use in the Home-park, at Windsor, as the inclosure for a portion of remaining exactly similar, under any variations of temperature.

N B Estimates given at so much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

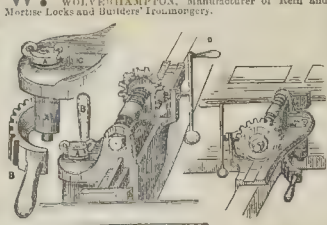
FRANCIS ARDING, Engineer and Iron Founder, Albert Iron Works, Uxbridge, Middlesex, begs to draw the attention of Builders, Contractors, and others to the above useful Machine, manufactured by him, for sifting sand, gravel, lime, coal, &c., by means of which one man and a boy can do the same amount of work as a dozen men with the common sieve.



Price, delivered in London,—

No 1 size to sift	£6 6 0
No 2 ——— Steel cylinder	7 7 0
No. 3. 4 feet cylinder	8 8 0

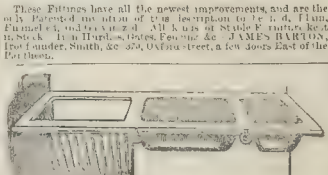
Architectural, structural, engine and mill castings of every description.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

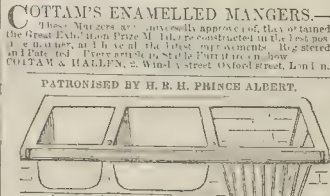
B. An eccentric notched lever, to be turned and pressed against the joist.



Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the size of the joist, then fix the set screw also. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually raise itself and hold the cramp firm: the greater the strain, the more rigidly, by its eccentric action, will the lever hold. The Patentee, in asking for attention of Builders and others, assures them that his cramp possesses great advantages. It is a new cramp of the first kind, and as well suited for doors and sashes as for floors. From its superior mechanical principle, it has greater power, and will be found to be more quick and safe to use than any yet brought out, and at the same time is light and portable.

SAW-MILL MANUFACTORY, Chelsea, London. WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for steam, water, or otherwise.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.



These Fittings have all the newest improvements, and are the only Patented combination of the description to be had. Plain, Fancy, and Ornamental Mangers, with Iron or Slate Fronts, kept in Stock. Iron Hurdles, Gates, Fencing, &c. JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal. They are constructed in the best manner, and have all the latest improvements. Registered and Patented Fronts, giving Stable Proprietors a good appearance. COTTAM & HALLEN, 2, Wind-yard, Oxford-street, London.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. Castings Warehouse, 81, Upper Thames-street.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as fixed in the new revistered Venetian Ventilator, so much admired, &c. &c. 64 each.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the Lowest prices.

14, Stanhope street, Clare-market, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security: also Parnell's Patent Noiseless Bar-staples and Striking Plates. Fire-proof Safes, Deed and Cash-boxes Copper and Lever Presses. Descriptions and lists of prices may be had at the Depôt, 32, Strand gratis.

STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.

CHUBBS' PATENT DETECTOR LOCKS give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose for which locks are required, and are strong, secure, simple, and durable.

CHUBBS' PATENT LATCH, for front doors, counting house doors, &c is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.

CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHIESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the falling of brickwork, timber, &c in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.

CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.

CHUBB and SON, 57, St. Paul's Churchyard, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its applicant has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in fact a beam of artificial stone with ribs of iron; the whole having great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr BARRETT, 12, York-buildings, Adelphi

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's).—J. J. JONES, having made great additions to his PATTERNS begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and Jack Wheels, &c.

BAKER'S OVEN WORK, Force Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c always in stock.

FOUNDRY AND IRON WORKS, 88, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, an I Steam-engines; Range and Hot-plate Metal, Ash-pit and Soot Door, adapted for Furnival work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc, it therefore combines the Stiffness of Zinc with the Durability of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Pas-sages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs about	18 oz.	per foot super.
No. 12	" "	20 oz.	do. do.
No. 13	" "	24 oz.	do. do.
No. 14	" "	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s. 6d.

Best fine Cut Clasp and Rose { 1s. 8d. 1s. 6d. 1s. 4d. 1s. 3d. 1s. 2d. / ½ 1 1½ 2 2½ 3 inch.

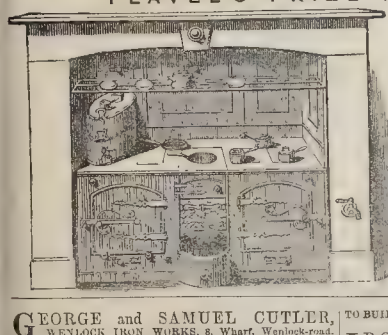
Sash Weights. Air Bricks, 3s. per doz. Hooping for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 3s. 6d. per gross.

Arnott's Ventilators, 4s. each Elliptic Stoves, with double backs, 2½d. per inch.

Register Stoves from 5d. per inch.

Improved Self-acting Ranges with oven and boiler { 28 inch. 26s. / 32 inch. 30s. / 34 inch. 32s. / 36 inch. 34s. / 40 inch. each.

Best Self acting Ranges, with oven and boiler, wrought bars and bright fittings { 30 inch. 56s. / 38 inch. 68s. each.



An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS, 19, Wigmore-street, London.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London,—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas works erected complete). And manufacturers of Corrugated Iron and all kinds of Iron Roofing for Rail way Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Screw Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER, and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Conochie's Registered Model Water closet." This water-closet is the most simple and efficient yet introduced for hotels, services, and for using without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented. A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agents and Factor, 18, Blandford-street, Manchester-square, London; removing out of Baker-street, Portman-square.

TO CONTRACTORS AND BUILDERS.

BENNETT'S LOCOMOTIVE and SELF-ADJUSTING CENTERING for SEWERS and CULVERTS, is recommended as an immense saving of time, materials, and loss of time incidental to striking, moving, and resetting. The striking has been so arranged as to ensure an equal pressure on all parts thereby dispensing with the risk of crippling or throwing down the arch.—five minutes only being required for striking moving, and resetting a length of 20 feet, which length is sufficient for any quantity of sewer.—Further particulars can be obtained of JOSEPH JEFFREY BENNETT, Dover, Kent; or of Mr JAS. HOLDSWORTH, 11, Shaftesbury-crescent, Vauxhall bridge-road, Pimlico.—Licences granted.

IRON ROOFS, BRIDGES, HOUSES, and CAST-IRON WORK, of every description, Wrought and manufactured by JOHN WALKER, Mill-wall, Poplar.

Offices, Arthur-street West, London-bridge, late 31, Gracechurch-street.

N.B. Builders and others may send their Plans and Tracings and Weights for Work carefully and promptly attended to.

PORTER (BROTHERS) AND STUART

(LATE JOHN H. PORTER),

IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS.)

JOHN SYMONDS and CO.

WORKS, GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE, of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

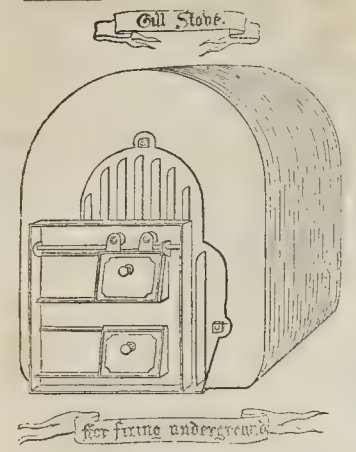
GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON Superior Process Works at the Regent's-canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water pipes, Hip pans, Castings, Furnace-pans, Baths, Buckets, &c. wholesale retail and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, bolts, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings by complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, UPHOLSTERERS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts in Worcester, MAY the 14th, insures perfect combustion, economises fuel, improves ventilation, and gives as much less attention as Oven, than other stoves in general use, was manufactured by T. and E. BAILEY, 271 and 272, Holborn, who are prepared to supply new, or adapt old stoves to the principle.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their NEW OVEN COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, ease of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove in Tender department of Deane, Dray, and Co.'s establishment, where may also be obtained particulars with prices, or forwarded free by post. DEANE DRAY and Co. (opening to the Monument), London-bridge. ESTABLISHED 1700.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A variety in stock upon the same principle. Gas Baths, fixed complete, with a warm bath ready for use in three minutes. Cooking and heating stoves for all classes, from 10 DEFRIES and SONS' IRY GAS WELLS, which force in new atmosphere at the other 10, Regent-street, or at the Manufactory, New-road, St. Pancras, near Pitzroy-square.



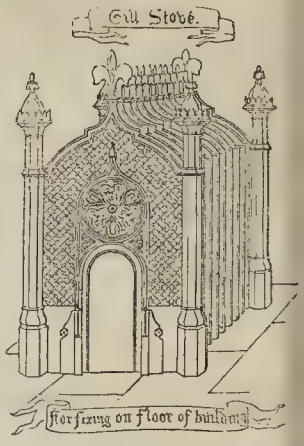
WARMING by HOT WATER.—J. W. EVANS and CO. KING'S ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, hot-houses, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the economical statement in the "Builder" of July 31, 1852, which fully bears out the able address of the Rev. H. J. Rogers, delivered at a meeting of the Architectural Society, wherein Mr. Evans shows that using hot water is really the most effective system to provide a warm, wholesome, and regular temperature in large buildings. It is free from all objections, requires no attention in working, and produces perfect ventilation with a uniform agreeable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, cable and coal frames, furnace grates, soot doors for the same, hot-water pipes, elbows, sockets, syphons, throttle valves, stop cock, flanges, bracket elbows, &c., also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron Timber Wharf, No. 6, Bankside, London, near the Southwark-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOULTON'S PATENT CALORIFERE, evaporating in twenty-four hours about 6 cwt. of water, without altering the finest forms or any superficialities of the most precious articles. The Calorifere warms 1 room only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Soap, at Hayward's, Dock-head, and several maltsters, millers, and manufacturers in London and country.—Apply per post to T. BOULTON, Engineer for French Flour Mills, Turbines, &c. 25, King William-street, City.

STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.



The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,
ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

PRIZE MEDAL OF 1851 FOR FIRE-LUMP GRATES
AND
PYRO-PNEUMATIC FRESH-AIR WARMING AND VENTILATING STOVE-GRATES.

PIERCE'S

ECONOMICAL RADIATING FIRE-LUMP GRATES,
Made in extensive variety of Patterns, from the simplest style of ornament to those of the most splendid design, suitable for Drawing-rooms, Dining-rooms, Libraries, &c. &c.

AND HIS NEWLY-INVENTED
PYRO-PNEUMATIC WARMING AND VENTILATING STOVE-GRATE,
FOR CHURCHES, HALLS, PUBLIC BUILDINGS, BANKING HOUSES, SCHOOLS, &c.

For which the Society of Arts, after many months' trial of this Grate in use, warming their Large Model-room, in John street, Adelphi, presented the Inventor with the Large Silver Medal, given by H.R.H. Prince Albert, at the Distribution of Prizes, in July, 1849.

MANUFACTORY: 5, JERMYN-STREET, REGENT-STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,
SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

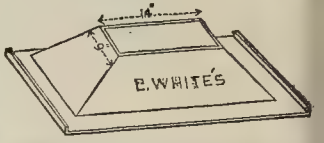
TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.



ANDREW CLARK and COMPANY,
PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS

CHEAP PEWTERING, GAS-FITTING, and BELL-HANGING. Improved Moulded Counter-cranes, 6s. per lb.; Private Residences fitted with G.s, Four Lights complete, 20s.; Bells hung in Secret, with best Porcelain Levers, 8s. per pull. BARRATT, Pewterer, Beer-engine Manufacturer, and Gas-Fitter, 13, Spa-road, Bermondsey.

ARTESIAN WELLS.—Boring for Water, Sinking Shafts, &c. The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

TO GAS MANUFACTURERS.
FOR SALE, a small GASHOLDER, 18 feet diameter and 8 feet deep, with counterbalance weights, pulleys, chains, and columns. Has been in use only about twelve months.—For further particulars apply to Mr. HENRY HARRISON, Surveyor, Eton College, Eton, Bucks.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
CASE-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley. From 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable Ironmongers, Builders, &c.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

SMOKE ACT.—WELSH COALS (of the finest quality), burning free from smoke, are recommended to the notice of Consumers generally, being well adapted to meet the requirements of the Act for the Prevention of Smoke. This Coal will be also found very durable and of intense heat. Supplied in large or small quantities by E. and W. STURGE, Bridge-wharf, City-road.

TO ARCHITECTS AND BUILDERS.
W. and T. WILLS, FIGURE and ORNAMENTAL MODELLERS, Designs made and modelled in all styles.—13, Harrison street, Gray's-inn-road.

PAPER-HANGINGS.—R. HORNE, PAPER-HANGING MANUFACTURER, 41, Gracechurch-street, City, invites builders and the trade to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by the aid of powerful machinery, he is enabled to offer at the following prices, in stock quantities, for cash only, viz.:—

Stout lining paper	5d	Prices.
Superior ditto	6d. and 7d	
Bed-room papers, in great variety	at 6d.	
An excellent oak paper	at 8d.	
Sitting-room ditto, on blended grounds	7d. to 9d.	
Hand-made marbles	9d. to 1s. 6d.	
Good satin papers	1s. 6d. to 2s. 0d.	
Flock papers	2s. 0d. to 2s. 6d.	
Hand-made granites	9d. to 1s. 0d.	

Every novelty in French and English panelled decoration always on hand; also excellent imitation of fancy woods.
N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps and the goods despatched with promptitude on receipt of a remittance to the amount of the order given.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 3 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs, its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non conductor.

INDOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, PULVINEAUX'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL. N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 316, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which above hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had (at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs constantly on view. The pure extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s per case; 4ths, ditto ditto, 33s. Also 16oz. ground ditto ditto, 4d. per foot; or 14 and 16oz sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 9d. per foot; 4-inch rough British plate tiles, 11s per doz. Also crown and sheet glass in crates; British and patent plate fluted and stained glass glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c. &c. FARMILOE and SON, 113, St. John-street, West Smithfield, London.

HENRY PASK, Baker-street, Clerkenwell, Sash, Shop Front and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York-road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons), Sash, Door, and Staircase Manufacturer, with well-seasoned materials and superior workmanship, at the lowest possible prices. Glazed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock. By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 3, Rutland-street, Brompton, Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles, lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

CYCLORAMA, Albany-street.—Now Open, with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of '72, and present state of the excavated City, painted by Mr. McNevin, from sketches taken by him se f in 1852.—Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1s. Children and Schools half-price.

PATRON—H. R. H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION. Under entirely new Management.—Great Novelty.—Dubosco's Illuminated Cascade every evening, except Saturday, at One o'clock, in addition to all the Lectures, Optical Exhibition, Photographic Gallery, &c. &c.—Admission, 1s.; Stalls, 2s. Schools and children under ten years of age, half-price. The ventilation and lighting by John Leslie, esq. maintains an equal and cool temperature in the hottest weather.

PATRON—H. R. H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION. Under New Management.—In order to render this popular place of instruction of greater national value than heretofore, Mr. PEPPER begs to inform the industrial classes at all factories and workshops, that they and their wives will be admitted on Monday evenings on payment of sixpence each, provided they produce a ticket signed by the foreman of the works to which they may belong. Books of tickets have been supplied to many factories, and will be furnished to all others as soon as possible. The Lectures will be delivered by eminent professors, and will consist of regular courses on Chemistry, Geology, Natural Philosophy, Astronomy, Mechanics, &c. &c. Each Lecture will last one hour, and be made as instructive as possible. The Inaugural Lecture will be given by the Rev. Bath Power, M.A. &c. on Monday Evening, the 11th of August, at Eight o'clock. The Optical and other Exhibitions as usual.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform Railway Directors, Land Proprietors, Solicitors, Gentlemen, and others, that they EXECUTE every description of professional work on the most reasonable terms. Railways, roads, water works, &c. planned, surveyed levelled, and completed. Engineering and architectural plans, sections, and designs prepared and executed. Estates, manors, parishes, and townships surveyed and mapped. Land, timber, buildings, &c. measured and valued.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform gentlemen desirous of acquiring a thorough practical knowledge of the profession, that they have rebuilt up their OFFICES with every requisite, including models and instruments of every description. The COURSES are all remodelled and enlarged, embracing all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING OFFICES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms One Guinea per Quarter. For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 4,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 4, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 50l. per mile per annum, whenever the Fish Joint, or certain other improvements, are here offered and used."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or to Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,
49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS, of every style executed in the highest class of art. Enrichments for ceilings of every period, whether in Stucco or Simulo, in the Elizabethan, pendent ive or flat, Louis XIV. in much variety, and to any degree of cost; Italian and Greek Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dre-sings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the tra ts of each. The general decorations of Drawing and Dining Rooms, Libraries, &c of very considerable extent, as furniture glass frames, tables, window cornices, screens, cantelivers, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

GUILD of LITERATURE and ART
for the relief (by loan or Donation) of Distressed Authors and Artists, and
ENDOWMENT ASSURANCE, and other practical objects
among authors and artists, to render such assistance to both as shall prevent the former from dependence, and the latter only be
found a new institution, where honourable rest from arduous
labour shall be associated with the assistance of mutual
duties. The council now is ready to enrol members, and to receive
subscription, and commence with the practical purpose of
expansion of the objects and constitution of the Guild. Copies of
this document containing the names of the officers and council,
and of the subscribers; and an abstract of the Act of Incorporation,
the Proposed by-laws and tables of premiums for the consequent
deferred annuities and the sums assured, may be had, free of
charge, at the Chambers of the Guild, No. 10 Lancaster-place
Strand; of Mr Mitchell, 33, Old Bond-street; of Mr. George
Simms, Deansgate, Manchester; of Messrs Wells and Lepp,
Booksellers, Liverpool; Messrs. Simms and Son, Booksellers, Bath;
Messrs. Innes and Arrowsmith, Booksellers, Brighton; Messrs
Rogers and Fowler, Booksellers, Sheffield; Mr. Sang, Bookseller,
Newcastle upon Tyne; Mr Bell, Bookseller, Birmingham; Mr J.
Munro, Bookseller, Edinburgh; Messrs Murray and Son, Booksellers, Glasgow; Mr. M'Glashen, Bookseller, Dublin; and may be
post, on receipt at the Guild Chambers, of a stamped and addressed
envelope. W. HENRY WILLS Honorary Secretary.

PELICAN LIFE INSURANCE
COMPANY, established in 1797
70, Lombard-street, City, and 57, Charing-cross, Westminster.

Directors.

Robert Gurney Barclay, esq. — Thomas Hodgkin, esq.
William Cotton, esq. F.R.S. — Henry Lingard Holland, esq
William Lewis, esq. — J. Peter Wagner, esq.
Jas A. Gunning, M.D. F.R.S. — C. Hamilton Turner, esq. F.R.S
Henry Evans, es. — Martin Wheeler, esq.
Kirkman D. Hodgson, esq. — Marmaduke Wyvill, esq. M.P.

The Company offers:—
Compound Security.
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.
Prospectuses forwarded at the Offices as above, or from any of the Company's Agents.

ROBERT TUCKER, Secretary.

WESTMINSTER FIRE OFFICE,
Chief Office—27, King-street, Covent-garden, London.
Established 1717.

Rates of Premium moderate
Short-period Policies granted.
Rent insured.
Losses promptly and liberally settled.

WESTMINSTER AND GENERAL LIFE ASSOCIATION.
Established 1836.

Life Assurances on all the usual modes effected.
Eight bonuses and Reports published among the Assured.
A Bonus of Profits every Five Years.
The Rates of Premium have amounted to One half the Premiums paid on the Assurances.
Assurances may be effected for short periods.

JOHN MURRAY, Albemarle-street.

KELLY'S PRACTICAL BUILDERS'
PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 36s., containing upwards of 120 Steel Plates, and numerous Wood-cut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING. Revised by TREDGOLD, both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 36s.; containing upwards of Ninety Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Ten Parts at 3s.; or in boards, 33s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches Chapels, Schools, Almshouses, Gas Works, Markets, Baths, Public Buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 28s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with the 6, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts at 3s. or in boards, 33s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes &c. By W. M. HOGGINS, Esq. Accompanied by actual specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 33s.

THE ENGINEERS' and MECHANICS'
ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer. &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1825, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this system has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth, lettered, price 36s.

The Builder.

SATURDAY, AUGUST 5, 1854.

THE weather disposes one to excursionize and gossip: we succumb with good motives, glad to find that the road which pleases us is the right one. ife would be pleasanter with many if they ould contrive to make these two points coinide oftener than they do. Our course last week as westward,—Bristol, Chepstow, Tintern, loucester, &c. and there are two reasons why e mention it,—first, that we may allude to e dinner of the Canynge Society, at Bristol, stablished to aid in the restoration of St. ary Redcliff,—and secondly, because the ritish Archæological Association will meet at hepstow on the 21st, and a few precursory otes may be useful, in leading some of the wellers in close towns, where "sewers pollute ie air," to get away into the country, and to vigorate both body and mind by communion ith nature.

The Canynge dinner was presided over on is occasion by Mr. Richard Poole King, and ne collection at the church and the muster at ne dinner-table showed, to those who needed ne evidence, the estimation in which that genman is held by his fellow citizens. Able, pright, and generous, he most worthily repreents the merchants of Bristol.

The mayor made an excellent speech. Shame ndeed, he exclaimed, as Canon Moseley had aid in his sermon in the morning,—shame ould it be to the memory of the merchant rinces of Bristol, and to her citizens in this or ny other age, if they permitted this building, at nce the pride of the archæologist and the grati cation of the antiquary, to become a matter of istory. It did afford him great satisfaction to ee the benefits which had arisen from the exertons of the Canynge Society, and he had much leasure in acknowledging how much their abours had been aided by that philanthropic erson, whoever he or she might happen to be, who had done such great things under the name f '*Nil Desperandum*.' Through the aid received rom that source, they saw parts of the building tanding out in a freshness and a vigour which ave confidence that the entire work would be ompleted sooner or later. He then glanced t the various works going on in Bristol,—new hurches, new hospitals, the orphan asylum at Horfield, where 300 children are clothed, housed, nd fed, without one shilling of funded property r a single known subscriber; and then urged ll to do something while they lived,—somehing which might last all time, and keep them n the kindly remembrance of posterity.

The Lord Bishop of the diocese, in the course f his address, mentioned an intention that had passed through his mind of building a spire n St. Mary Redcliff, but which circumstances oad led him to change into the erection of a hurch in his own parish.

Mr. Scandrett Harford, in proposing "*Nil Desperandum*," bore testimony to the manner in which the work of the north porch had been executed. In the revival of learning, observed the speaker, the cities which took the lead were principally the commercial cities, as Pisa, Florence, Venice, and Genoa; and their merchant princes were the foremost in the great work. There was an existing edifice at Pisa, much larger in proportions, but not equal in beauty to that of St. Mary Redcliff, which was the fruit of the liberality of the Pisans of those days. Many other edifices also had their rise in those times, from the same feelings. There were Canynges in Italy in those days. He need not allude to the princely house of the Medicis, or the Dorias, or others who took the lead in enterprises of this kind; but he merely mentioned the fact to remind the company of what commerce had effected, and what it ought to effect in these days.

Mr. Proctor, whose early exertions were loudly recognised, mentioned an interesting fact during his speech connected with the north porch. When the work was about to be commenced, in 1848, the committee applied for estimates of the cost, and he was astonished to find the accuracy with which the calculations of the parties tendering had been made. Messrs. Willcox and Son, of Bristol, sent in a tender for 2,500*l.*; Messrs. James and Co. of Bristol, 2,559*l.*; Messrs. Broad and Son, of Bristol, 2,618*l.*; and Mr. Myers, of London, 2,750*l.* The donor of the funds was not then prepared to make an engagement for so large an amount, but he undertook, if men were engaged by the week and stone bought, that he would supply money. The result had been, that the cost of the work so executed was about 2,600*l.* and he thought it highly creditable to the gentlemen who had tendered.

The architect being named, Mr. Godwin described what had been done, gave the particulars of a stained window for the south transept, for which funds had been raised by some ladies of the parish, and urged that if the works were not carried on more rapidly, a catastrophe would one day startle the west, and make it necessary to rebuild instead of repair.*

On hearing this, Mr. Harford offered 100*l.* towards the work, if nineteen other persons would give the same sum. Mr. Proctor said, he should be proud to be the second. The chairman added his name to the list, and the bishop, if we understood rightly, expressed his readiness to be the fourth.

Mr. Britton made an energetic and humorous speech; and allusion having been made to the circumstance that Mr. Charles Hill and others had come from London expressly to attend the dinner, the proceedings terminated. The report of the committee showed that since the last anniversary the society had contributed 350*l.* towards the restoration.

And now as to the road to be taken by the British Archæological Association, which circumstances led us to tread. On the first day (Monday) the association will confine themselves to their place of meeting, where the castle, church, remains of priory, the town, and the walls, with papers in the evening, will supply ample materials for employment and enjoyment. On Tuesday there will be an excursion to Mathern, Moynescourt, St. Pierre, Caldicot Castle, and various churches. The next day they will go to Piercefield-park, Wynd Cliff, and Tintern Abbey. On Thursday to Llandaff, Cardiff, Newport, St. Woolas, and Malpas Priory. Friday will be devoted to Caerleon, Usk, with its castle, church, priory remains, and encampments, and Raglan Castle. And on Saturday, Caerwent, Llanvair Castle, Penhow Castle and church, and Pencoed Castle, will be visited previously to the closing meeting.

The ride from Bristol to Aust, the Old Passage, is a pretty one, and when those who are with you are of the class who can find not merely "sermons in stones," but a moral essay in a buttercup, a lecture on taste in the lowly pimpernel, discomfort nowhere, and pleasure in everything, its enjoyments are immensely increased. The design for a bridge over the Severn here, with its openings of 1,100 feet each, talked of some time ago, has not been carried out. The rapidity of the current and the nature of the coast make it the worst important communication in the country: great delays and serious accidents often occur and lead to the hope that a bridge may one day be obtained here. Difficult as the task might be, its accomplishment is mainly a question of money.

When done it is to be hoped it will not be quite so ugly as the bridge over the Wye, at Chepstow, lately completed by Mr. Brunel, wherein the roadway over the water-way is supported by a wrought-iron tube 309 feet long, carried at each end on towers. Cast-iron cylinders filled with concrete carry the rest of the bridge, and the whole cost was about 65,000*l.* Without a word against the construction in point of science, in the art point of view it is the most unmitigated piece of ugliness that was ever perpetrated and deforms a noble view.

The Castle at Chepstow has not been properly investigated and illustrated yet. Its extent, the period over which its erection extends, the curious character of the building now called, erroneously, as it seems to us, the Chapel, would all lend additional interest to the investigation. The mass of the structure is of the Norman period (it was founded by Fitz-Osborne, Earl of Hereford, soon after the Conquest), but each of the three succeeding centuries has left its impress. The little chapel in the upper part of the keep deserves notice, and the carved figures on the merlons of the battlements will not escape it. The position of the Castle on a rock overhanging the river is very fine, and the masses of foliage in the ditch make it a beautiful object on the land side.

A thunderstorm here was a sight worth seeing. It began magnificently. First there was a dead stillness; then slowly and majestically passed up from the west a great wind, bending down the distant trees, and rushing steadily on, with a hoarse roar, till all its vassals, high and low, had bowed their heads before its omnipotence. Keeping them in subjection for some seconds, it shook off their leaves in showers, and then, satisfied with this exhibition of its power, it gradually relinquished its grasp, and each branch sank back to its usual quiet drooping. Down came the heavy storm-drops—slow and sullen at first, soon quick and petulant: loud roared the thunder, and faster fell the rain, till, presently, out shone the bright sun again, kissing away the storm-tears, and smiling soothingly on the sweet face of nature, rendered doubly beautiful by the struggle through which it had so meekly passed.

The church at Chepstow is Norman, and retains some interesting portions of the old work, in the west front especially, but it has been sadly dealt with by its repairers.

A short ride brings you to the Wynd Cliff, and a more exquisite scene than that which spreads before the eyes of the traveller when he reaches the top of it is not to be found in or out of England. Rich and luxuriant foliage mingled with bold crags spread away and away far below, deceiving the eye for a time as to the height from which the whole is viewed. Around the Wye spreads a natural amphitheatre of hills, and over these, bathed in a flood of golden sunlight, is the "princelie Severne" and its richly clothed banks. Rocks, wood, and water sparkle in the bright light, the colours varying every instant: now the masses of foliage grow dark and solid, and then the sullen stream darts into clearer view, a flood of glittering quicksilver.

* The scheme of the stained window being executed by Mr Wailes, may be thus described:—It is a lofty wind w in three stories The upper range is to illustrate the foundation of the Mosaic and Patriarchal temple, consisting of rites and ceremonies without permanent resting-place, exemplified by figures of Melchisedec, Abraham, Moses, Joshua, and typologies of Melchisedec offering bread and wine, sacrifice of Isaac, Burning Bush, Passing over Jordan. The second row is to illustrate the founding and building of the visible temple, exemplified by figures of David, Solomon, Ezra, and Nehemiah, and by subjects of David showing plan of temple to Solomon, building of first temple, Ezra receiving permission of Artaxerxes to rebuild the temple, building of the second temple The lowest range shows the Christian temple, to which the party commemorated made so large a contribution, as set forth in the figures of Matthew, Mark, Luke, and John: and in the subjects of feeding the hungry and giving drink to the stranger, clothing the naked, taking the stranger in, visiting the sick and prisoners.

We have time only to indicate,—not describe. Tintern Abbey was the next object sought, and right beautiful the well-kept ruin looked when it broke upon us, snugly lying in its peaceful valley. It is a grand specimen of the Geometrical style, belonging to the end of the thirteenth century, and will afford matter for a good paper. A merry party, from the High Sheriff of Gloucester the custodian said, had been shot into it, and were perseveringly sketching at all points. It is a noble ruin, and was then even fuller of beauty than usual.

The railway helped us to Gloucester next day, and then to London. Gloucester, with its beautiful cathedral, is very readily accessible from London. The excursion train is a good schoolmaster: the pleasure that will be given by its means, and the knowledge that will be imparted, are incalculable. We hope it will be taken advantage of to a great extent, and that, too, at once. "Divers," says Seneca, "have overpassed their life in only employing themselves in seeking out the instruments of life. Look into every particular, and consider the whole, there is no man's life but is aimed at to-morrow. Thou askest me what evil there is therein? Infinite; for they live not, but are to live; they defer all things."

ON THE PRESENT STATE OF TASTE IN ORNAMENTAL DESIGN.*

In mentioning "schools of drawing," I may be thought to have used a strange, unknown expression, as custom has called them "schools of design;" but I can find no other meaning in *écoles de dessin*, or *schuole di disegno*; and drawing has no need of being ashamed of its name. Another and a better title, "schools of art," has now been applied to them, and it is satisfactory to know that the talents of those to whom their management is committed are a guarantee for the instruction they afford, and are calculated to allay the apprehensions of any who might be disposed to think the original title tended to encourage the students in a belief that their particular calling was to invent "*designs*."

Hitherto drawing in this country has been ill-fated, though of such importance to every artist that none deserves the name unless he excels in it; and the neglect it meets with at once accounts for the faulty execution in this country of the many common subjects which are so admirably executed in France by the same class of draughtsmen. It is an indifference to the necessity of drawing that leads many a tyro, who scarcely has learnt to draw a line correctly (much less to make accurate studies of the human form, or to understand the art of grouping figures in a composition) to lay aside the pencil and adopt the brush, when he wonders, too late, that he has never been able to display the talent or obtain the credit of an acknowledged artist. And many even excuse their ignorance of drawing by some fallacy, such as, "there is no outline in nature," as if a real object could be delineated without *circumscribing its limits*.

But while drawing is so essential, it must be recollected that the use of the hand, and the direction given it by an accurate eye, will not suffice to *form taste*: they only afford the means of execution; and while we admire the skill of the French in drawing, and admit their inventive talent for design, we cannot be blind to their deficiency in that purity of feeling which marks the taste of Greece, or of Italy. They have the desire to excel, and the full conviction of their success; both useful in their way, for too great diffidence impedes exertion; and if their works often err in overwrought ornament, they may find an excuse in the injury received by their taste from the splendid monstrosities of Louis XIV. and the *rococo* of his successor. They have also long shown great proficiency in decorative art, as the palaces of their kings have proclaimed in the period of the Renaissance, in the embellishment of which both native as well as Italian artists were employed; and whoever may have been the sculptors who executed the statues at Rheims, and some other cathedrals of France, it is evident that good art was highly appreciated and executed even at the beginning of the thirteenth century in that country. And while mentioning the skill of the French in design, it would be unjust not to speak with commendation of that of Belgium, which is the more remarkable as it is not confined to decorative art; and every one will admit the high position that country has taken in sculpture and the highest branches of wood carving. But whatever praise may be justly bestowed on French taste in certain branches of decorative art, and however much they may have encouraged it, it is by no means desirable that we should follow them as models; for while many of their ornamental works are creditable, they are too often deficient in breadth of style, in grandeur, or simplicity, and disfigured by elongated proportions, broken outlines, and meretricious ornament. Nor can an exaggerated sentiment be compensated for by invention, fancy, or minuteness of detail. Their figures, too, offend from a voluptuousness and theatrical treatment, as well as from too much of the academic study; and they fail in ideality and the elevation of high art. They are also apt to appear conscious of being looked at, and you feel sure if they could speak, it would be in French. Indeed, if Gallicism is found to have done an injury to the taste of Benvenuto Cellini (as shown in his Diana of Fontainebleau and various works he executed in France), as well as to that of some other Italian artists, we may feel sure that the French, talented as they are, should not be blindly imitated.

The great point, both in enabling the hand to execute, and in giving the power of appreciating the beautiful, is the education of the eye; for, as the ear is the judge of sound, so the eye perceives the harmony of proportion, form, colour, and every other condition, on which beauty depends. Proportion I place first, because it speaks most immediately to the eye; and no amount of excellence in form or details will compensate for a disregard of it. Nor would the most elegant Greek vase, or the most classical building, continue to be beautiful, if its proportion were altered. What would so many Italian monuments that command our admiration be without it? and the beautiful fountains before St. Peter's, at Rome, if copied by an unskilful eye, might easily be made to assume the graceless and unmeaning character of our dumb-waiters. The column of water is also as necessary for the maintenance of proportion as the basins into which it falls; and arbitrary or incongruous combinations should be avoided, whatever the character of a fountain may be: thus, an elephant spouting forth water is unnatural and monstrous; nor should the water run down stairs, for though the caprice was adopted by the Arabs and by the Italians, it is the result of bad taste and poverty of invention. Nor should a fountain obtain any merit for throwing up a column of water to an immense height, beyond that of being the largest of squirts; and its claims for precedence should be laid among hydraulic machines, instead of works of taste.

In no country of the present day is the harmony of proportion so well understood as in Italy; and no where is its importance so clearly perceived as in the buildings of that country, where it oftentimes happens that at first sight you are charmed with the effect of an edifice which, on closer examination, is found to be deficient in form and in many of its details, or replete with the barbarisms of broken outlines and the excrescences of a debased style. And when such imperfections of form as well as of details are concealed by the general effect produced by the symmetry of proportion, it is evident how essential this last is for captivating the eye and giving the impression of beauty.

As the perception of proportion, like the accuracy of the ear in judging of sound, is a natural gift to some persons, it may be improved by, and requires, study; and it may be taught, like music, to all who are not destitute of every feeling for harmony. Some, indeed, are incapable of comprehending it, as some are unable to distinguish colours; but the habit of seeing and having the attention drawn to it, may even go far towards instructing the generality of men, who, at all events, would otherwise be left in a wilderness of error. It is, indeed, easier to detect imperfections in form and detail than in proportion; and as the perception of this taste is of the highest importance in judging of effect, and as it has the greatest influence on the eye of all who appreciate beauty, so it is the last to which the uncultivated taste attains. Professor Cockerell observes, "that we begin by admiring ornaments, details, and forms, but it is in a more advanced stage only that we make all these subordinate to that sense of mythical proportion and that harmony of quantities which affect the mind like a mathematical truth; and like a concord of musical sounds on the ear, are perceived, and confessed as obvious and unalterable." . . . "Custom, convention, and often incapacity of discernment, reconcile us to those proportions we are most used to, and we are blind to those defects which a fresh and accomplished eye is at once shocked at; yet the sense of vision so studied by the Greeks is to be educated, like a real moral sense and every other, by the diligent culture of science." . . . "The informed artist recognizes the claim which this great element of art has above all others on his studious attention." . . . "He seizes with delight any rule that will conduct his works to the excellence so apparent and so universally admitted in the Greek proportions; he rejoices in any of the slightest elements of the grammar and syntax, by which he can attain to their eloquent language; and he confesses that without them all is confusion, hazard, and fashion."

Good and well-defined rules are, indeed, most necessary in this, as in every other, study: even those few who possess a natural perception of the beautiful are benefitted by them; and the generality of men cannot receive proper impressions without their aid. Nor can instruction be imparted to a beginner without enabling him to understand what the eye is taught to admire. Rules, too, are required for correcting such caprices as tend to mislead the taste; and the unfledged beginner must be content to be guided by them, until he has received the power of independent flight. But taste while kept in order and directed by rules, should not be wholly *dependent* on them: they may be the leading-strings of the tyro, not his crutches, on which, when grown up, he is to rely; and unless he can then afford to act without being dependent upon them, he will never rise above mediocrity and conventional art. Nor can rules be framed until a subject has been long studied and thoroughly understood. It was too great a subserviency to fixed rules that cramped the arts in ancient Egypt, which never escaped from the trammels of conventionalism. The conventional is of its own age and country, and is destined to perish. Not so real taste, which is of all ages, and of every country which has the talent to comprehend it; and flourishes in proportion as it is free. The genius of the Greeks could not submit to be fettered; and it is right to bear in mind that no new successful effort of genius was hampered by, or dependent on, mere rules.

Rules embody, and convey to students, what experience has established, and they guard against error; but no art ever began with rules, as grammars never formed a language; and what Horace says of words,—

"Multa renascentur quæ jam cecidere, cadentque
Quæ nunc sunt in honore vocabula, si volet usus;
Quem penes arbitrium est, et jus, et norma loquendi,"

holds equally true with regard to ornamental design. But the changes or innovations must be such as taste and good judgment can sanction; and though genius may be encouraged to invent, arbitrary ornament should not be tolerated, nor changes be made for a mere desire of novelty. No ram's horns should be substituted for volutes in an Ionic capital; no copies of natural objects should compose a work of decorative art; and no borrowing from a design of a totally different character should be resorted

to in order to make up a deficient corner. It should have one motive or intention throughout:

"Servetur ad imum
Qualis ab incepto processerit, et sibi constet;"

and many a Horatian maxim laid down for poetry may well be applied as a rule in æsthetic art.

The early steps made by the Greeks were gradual and judicious: they borrowed much from the styles of older people with whom they came in contact, and the same adoption and adaptation of other notions (*parce detorta*) are seen to the last in the various details borrowed from "the barbarian," but which, by being made really beautiful, became their own. They did not borrow *in order* to compose a new design, but because what they selected suited it. This remark is of course only applied to their ornamental art, not to their sculpture of the human figure; and though this last had in early times a rude character, owing to their imperfect skill in representing it, they gradually improved and attained to a nearer approach to truth as they advanced. But neither at first, nor after their taste had become formed, did they confine themselves to conventional rules; and even their architecture was free from the trammels to which we have subjected it. The proportions of a temple were not laid down according to fixed measures, without reference to the position it was to have: they consulted their eye rather than their compasses; and a column was not necessarily of the same number of diameters *because* it was of this or that particular order. Hence it happened that no two Greek temples,—no two sets of columns of the same order in different buildings,—were of the same proportion; as no two temples were confined to the same kind of site.

Among many mistakes made in modern Europe is the custom of representing pictures on materials ill-suited for the purpose: another is to make ornaments in decorative art direct imitations of material objects. Even certain materials are suited to particular kinds of art; and thus panel, canvas, and the fresco wall are those most proper for paintings. In all of these, near and distant objects and the various degrees of distance can be represented with proper effect, by the distinctions of colour as well as by the effect of aërial perspective. But when metal, stone, and similar materials are employed to represent landscapes, or a number of distant figures in bas relief, it is evident that they attempt what is out of their province: the absence of aërial perspective in the metal or stone confuses the foreground with the distance, and they both continue to appear (as they are) on the same plane. Sculpture, therefore, should abstain from a mode of treatment beyond its own sphere. It has its own vocation distinct from that of painting, and it only injures its own credit by aiming at that which belongs to the sister art.

The error abounded in the middle ages; but the Greeks were satisfied in bas-relief with figures in the foreground; and the same maxim recommended by Horace for the stage,—"*Nec quarta loqui persona laboret*,"—led them to avoid the introduction of figures four deep upon the stone. They had no bas-relief in marble or bronze representing the battle of Marathon, still less that of Salamis: similar subjects were reserved for painting; and it was for the tasteless Romans to disregard that principle, by representing the confusion of battles upon such unsuitable materials. Nothing but the exquisite skill of a Ghiberti could make us tolerate background landscape, and distant as well as near figures in bas-relief, or the different actions of the same persons, on one field; and however we may admire the execution of the beautiful gates of the Florence baptistery, the introduction of background in bronze or marble is an unjustifiable liberty. Stone and metal are suited to statues and bas-reliefs, not to *pictures*; and the same applies to wood and other materials, where objects are carved upon them; nor should a landscape be tolerated on a fictile vase, nor even as a coloured painting on a porcelain cup. This is one of several faults in the sumptuous vases of Sèvres manufacture; which also not uncommonly offend in proportion, and in an extravagant richness of decoration. There, too, we often find the picture of a landscape or a build-

ing not only disagreeably contrasting with the tawdry gilding or the heavy colour of the surrounding groundwork, but placed in a square compartment at the front (or back), which is therefore cut in half as you walk to the side, and ceases then to form part of the ornamentation or general effect. A subject to decorate a vase should be so placed upon it, that some equally interesting portion of it should always be before the eye; like those bas-reliefs so admirably introduced on the best Greek vases. And when, which is sometimes the case, the Greeks placed figures as a central picture, it may either find an excuse from the vase having been intended to stand where it could only have been seen in front, or may be used as one of many arguments to show that even *they* were not always right, and must not be *blindly* imitated for their name alone. The same adaptability of material applies to the representations of pictures on tapestry, worsted work, and the like; which, after all, are only imperfect copies of copies; and however well they may be executed, they only excite our admiration in proportion to the difficulty or the improbability of success on such unsuitable substances. They aspire to what is out of their sphere, and they fail to succeed in what they profess; for, after all, the picture, be it ever so good, is always inferior as a picture, and all the labour has been spent to produce what is imperfect. To attempt what can only be deficient must necessarily be a wrong principle; and what can be farther from art, than a design in worsted work, where every line is broken up into a minute staircase?

Whatever belongs to decorative design, must be subservient to its conditions; and if, as is sometimes permitted, a small picture forms part of that design, it must conform to the general effect, as in the ceilings of the Vatican and other Italian buildings, where medallions and vignettes are admitted into the general decorative composition. Even fresco painting is bound to suit its effect to the ornamentation of a building, and whatever is part of a design, must accord and harmonize with it; while this must itself be subordinate to, and depend upon, the general features of the building. No better examples can be given than by Giotto's chapel of the Arena, at Padua, and the library of Siena Cathedral; which also present admirable specimens of the mode of decorating large flat surfaces with paintings, and a perfect effect of richness of colour and unity of design.

Pictures on panel and canvas are not subject to the same condition of ornamentation as wall-paintings; they claim, and have obtained, a separate place and distinct admiration, irrespective of the decoration of the wall on which they hang, and of which they form no part.

The imitation of natural objects for ornamental purposes usually disagrees both with the materials used and the place where introduced. It is also an indication of poverty of invention, and a deficiency of taste for design. In a carpet where roses and other flowers are figured, we find the same impossibility of correct representation already mentioned: the very best rose is always unlike the reality, while the imagination is diverted from the general effect by the comparison of this imperfect copy with the natural flower. The same objection applies to imitations of architecture, or any other real object on a carpet; and the nearer the resemblance, the more glaring the inconsistency of making you appear to crush roses, or trip over the tracery of a Gothic window.

Not so with patterns, which are what they pretend to be, which aim at proper effect in form and colour, and which answer their real purpose—ornament—without disturbing the imagination or proclaiming their own incapacity. They decorate instead of affecting to represent; and thus it is that the graceful combinations in Saracenic, Byzantine, and other patterns delight the eye, while they perform most completely the object they have in view. Nor are they limited in their colour, as when nature is copied; and they assume whatever use may suit the general harmony of the whole design without violence to truth.

The Greeks were fully alive to this. Their mouldings were not servile copies of flowers or other natural objects: they took the idea, the *motive*, of the object and made it an ideal imitation, which was much more pleasing to the eye than the imperfect attempt at representation in an unsuitable material; and it is evident that no copy of a real honeysuckle would have been as beautiful an ornament as the conventional flower and leaf we see in a Greek building. The same idea was carried out by them in fancy borders, on walls, vases, furniture, dresses, and objects of common use; and, generally speaking,

in all ornamental decoration where figures were not introduced. It was only in the decadence of art that they adopted a somewhat closer imitation of real flowers, as on the vases of Apulia. With the Greeks "the beautiful and the good" were closely allied; and if they did not, like one great German writer, include the good in the beautiful, or consider the latter the higher of the two, they thought that nothing in art could be good without being beautiful; and to be καλος και αγαθος, "beautiful and good," was the highest merit even in man.

The same feeling and ideal conception of the beautiful enabled them (as I have already observed) to perceive, in the ornaments of people less cultivated than themselves, whatever possessed the germ of beauty, and whatever they did borrow they improved. Nor was this unworthy of their genius; and it would be well for us to recollect that the most accomplished minds have not been above the adoption of what was beautiful from other sources. They preferred what was good to what was merely new. Nor was novelty the same recommendation to the Greeks as to us; and when our vendors of ornamental works assure us that they are the "newest" instead of the "best," and when good things go out of fashion to give way to some fanciful novelty, we may vainly hope for taste either in the maker or the public. The Greeks, on the contrary, repeated the same favourite design for years, when once pronounced good; and when brought within the reach of all, it was common without being considered "vulgar:" old types were also reproduced under new forms, and new ones were not devised by them because new ones were required, but because they were suggested by their genius. Theirs was not a manufacture of novelties, nor did their talents pander to the cravings of wealthy caprice, and neglect the more important duty of beautifying objects of daily use and humble life.

Among the common errors of people deficient in judgment, and particularly of the English, are a blind admiration for the works of foreigners, often without the necessary inquiry into their merits, and a disregard for greater talent in their own countrymen. Nowhere is this more striking than in the slight regard paid to the wonderful genius of our Flaxman, who, had he been Herr Flackmann, might have obtained the praise he merits here, and obtains abroad. We disregard the "prophet in his own country," and take the "*ignotum pro magnifico*" with complacent innocence; as we pronounce many manufactured articles imported from France to be far superior to our own, without dreaming of their being the re-imported productions of English artisans; and a vocalist might have less chance of admiration under the name of *Mrs. Green* than under that of *Signora Verde*.

The mixture of dissimilar substances and counterfeit imitations are to be avoided, equally with the unsuitable materials already mentioned. The union of bronze (and above all of bright brass) and wood is also objectionable; and even some of the much-prized tables of Florence, in *pietre dure*, imitating birds, flowers, and other natural objects, do not accord with right principles. These are objects of wonderful skill and costly magnificence, exciting a feeling of surprise at the execution, rather than of admiration for the design.

The same may be said of the rich cabinets

inlaid with brilliant stones and costly jewels, where the artist seems to have sought to make splendid what he failed to make beautiful; and where the tortured outlines, the twists, scroll-formed mouldings, and distorted framework, which usually form a conspicuous part of them, proclaim the absence of all feeling for elegance and purity of design; and if a higher style of work is attempted, by the substitution of human figures for the legs, it falls as far short of nature and of art as the sculptures of the South Sea islanders. Such pieces of furniture excited the general admiration of their time; though a clumsy superstructure, on slender deformed legs, might call to mind the corpulent body and emaciated limbs of some old-fashioned dotard.

Again, a statue or a temple, made of glass, is inconsistent and objectionable; and even a vase, originally executed in stone, and designed for that material, rarely bears the same character when copied exactly in metal, pottery, or other substance; and form, treatment, and design must often vary according to these conditions. False imitations are mean: a cast-iron vase can barely find an excuse in its durability for intruding where a fictile one would not be safe; and a painted counterfeit has the sad pretensions of a rouged face. Nor can a pretended bronze statue of painted gypsum find a good excuse in cheapness, however we may allow it to the common, unpretending, white cast. Again, the glass body of a vase, with a metal handle, foot, or border, besides inconsistency, conveys a disagreeable feeling of insecurity in its use, from the greater and less durability of the two materials; and you fear lest some accident should leave the handle alone in your grasp. A want of skill in the maker is also implied by the completion of his work in a different substance.

Many a glass or porcelain vase might remain without handles if the maker did not apply in his embarrassment to a friend in another trade; and as the good-natured smith has come to the rescue on one occasion, he is naturally appealed to on another. A glass, therefore having accidentally come out as a long cup (fig. 1), without a foot to stand upon, the smith is again solicited to supply the deficient member; and lest any superior invention should contrast too strongly with the poverty of the original cup, the metal stand humbly imitates its companion, and finds its own security in a mass of nondescript ground-work, or imaginary vegetation (fig. 2). It

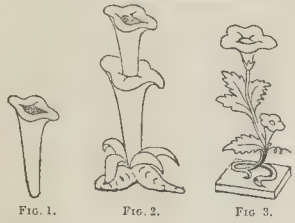

Fig. 1. Fig. 2. Fig 3.

will be fortunate, too, if its deformity is not increased by the contrast of metals of two different colours, besides that of metal and porcelain in the flower, as so often seen in fanciful candlesticks, and other objects supposed to be ornamental (fig. 3).

But mixture of materials is not always resorted to in order to escape from a dilemma: it is frequently thought to be an improvement, and a sign of taste; and a brass, gilt, or silver snake is coiled round the glass, for the double purpose of ornament and support (fig. 4). Sometimes, however, the dependence on metal being scorned, the woman-loved reptile is of the same material, and an opaque blue glass snake winds round the transparent bottle (fig. 5). This may remove one objection, but still leaves that of poverty of design; as when a glass imitates a pineapple, which, too, is generally found to borrow the foot of a tumbler to adapt it for use (fig. 6).

Still more objectionable are the combination of two different ideas and two incompatible natures to form a design; and the union "of the ugly fish and the beautiful woman," "the dolphin in the wood and the boar in the sea," denounced by Horace, are not more inconsistent than many of the anomalies produced daily by our *constructors* of designs. In one a man sits on a truncated column, with the branches of a candlestick growing luxuriantly from his head, while he plays a lyre, like "Orpheus, the mover of woods" (fig. 7): in another a stork performs the

Fig. 4. Fig. 5. Fig. 6. Fig. 7. Fig. 8.

unbirdly office of holding a light or a cornucopia in his beak for the same purpose, as if to add another inconsistency, and to show how little one part has any connection with the rest (fig. 8). These faults are frequently made worse by the same use of two different substances already noticed.

Even in copying from good designs, and in the selection of others of uncertain merit, the feelings and proportions of the former, and the excellence or the defects of the latter, are not always understood; and we often see blunders such as these, where the basin is altered into a size too small for the ewer (fig. 9); and the spout of

Fig. 9. Fig. 10. Fig. 11.

the classical *prochous* is immoderately thrust up (fig. 10), while another is spoilt by the lip being abruptly cut off (fig. 11).

Arts of design have a totally different office, and are guided by very different principles from arts of imitation. The former must be inventive, and independent of *direct imitation* of nature, from which the *idea* alone should be taken; and this is the more to be urged at the present moment, as some still maintain that natural objects should be chiefly selected for decorative art, and that workmen should be furnished with casts from real leaves, &c. in order that they may *imitate* them in architectural mouldings and ornamental work,—an error, as I have already shown, not committed by the Greeks and others most remarkable for good taste.

This ornamental work is of course distinct from subjects adapted to the higher branches of sculpture and bas-relief.

But while insisting on the false principles of direct imitation for architectural designs, I admit of certain exceptions to this as to every rule; deviations from which must depend on the discrimination of a talented artist. Thus the rope moulding, so admired on the tower of Belem and other buildings, and a mixture of natural objects in certain kinds of mural decoration (as on walls and ceilings of Italian and Pompeian rooms), are allowable, provided they are subservient to—and the accessories, not the staple, of—the general ornamentation.

A glaring inappropriateness of subjects to particular materials and to particular places, is observable in the silver ornaments of our dinner tables and their plateaus. Here, in our massive and costly centres, and other pieces of decorative plate, instead of figures gracefully grouped to form a subject worthy of the material, or some composition showing a feeling for ideal beauty, are the horses of Mamelukes and knights, palm-trees, dogs, or other imitations of common-place objects from real life, proclaiming the usual want of invention, and being thoroughly unmeaning and out of place. As no effort of genius led to the design, so no idea of taste is connected with them; they are more or less like the reality, but suggest no talent beyond the skill of the copyist and of the workman; and as the "*faber incertus*" is guided by chance in his selection from the menagerie, a horse may come forth, or an elephant, according to his momentary caprice. Reason, taste, and ideal beauty have no part in such a selection; and where a more extended work is required, a number of parts are generally put together to complete the required dimensions, without combination or a "motive." Again, when figures of men are introduced in several compartments, they are frequently of various sizes, and characters, in different stages, totally unconnected with any *general design;* and when classical drapery is imitated, it is not the figure wearing it, but the drapery, that is designed, which, too, is thrown by a gale of wind into fluttering folds, and has all the mannerism and extravagance of the worst Cinque-cento style. Or if an effort is made at composition, the fanciful is generally substituted for the ideal; and its deformity is increased by overwrought ornament and crowded details.*

Gardner Wilkinson.

ON THE INFLUENCE OF SOME EXTERNAL AGENTS ON THE DURABILITY OF BUILDING MATERIALS.†

The action of the atmosphere upon metals is even more complicated than that which takes place upon stones, because the electro-chemical changes are more efficient, and the metallic bases are susceptible of combining with a greater number of gases than the earthy bases or the metalloids. In building operations the metals commonly used are iron, lead, copper, tin, zinc, with the mixed metals, brass or bronze, and to them we will confine our attention.

Iron, whether cast or wrought, becomes rusted on exposure to the air or water under certain conditions; that is to say, the outer portions of the metal are converted into a hydrous oxide, and can be detached in scales, or flakes. Many systems have been proposed to obviate the danger, and many substances applied to correct the evil arising from this cause, full information concerning which is contained in Mr. Robert Mallet's papers in the "Transactions of the British Association for the Advancement of Science." His experiments appear to show that gas tar applied hot is the most efficacious for iron work exposed to cold water; and that a coating of caoutchouc varnish resists the longest in hot water; but that neither of them can be considered a durable defence. Cases cited by M. Vicat are within the knowledge of every architect who has examined this class of phenomena, which prove that in some waters, as in some positions in the open air, iron work, totally unprotected, will last an indefinite period. These exceptions are, nevertheless, so rare, and the destruction of iron unprotected is generally so rapid, both in air and in water, that constant care and attention are required to guard against the destructive tendencies of these agents. If iron work be exposed to the air in positions which render the renewal of the latter difficult, and at the same time retain it in a marked degree of dryness, the iron will become covered with a coat of rust, through which the atmosphere cannot penetrate to attack the metal beneath. If the water in which iron is immersed contains a very small portion of some of the earthy salts the decomposition will take place slowly. But it is necessary to observe that these remarks only apply to iron of considerable dimensions; small wires decay rapidly on exposure to either of these causes of disintegration.

Should iron, however, be exposed to confined air in damp positions, the decay attains its maximum. Carbonic acid gas contributes much to this, for, under its influence, iron passes (to use the words of Vicat), into the state of the carbonate of protoxide, which, absorbing fresh doses of oxygen, transforms itself into a hydrate of peroxide. It is indeed generally considered that oxidation cannot take place to a dangerous extent unless carbonic acid be present; and it is precisely for this reason that iron, bedded in fresh masonry or concrete, resists the action of the air, because either the mortar absorbs the carbonic gas, which has a greater affinity for lime than it has for iron, or the masonry is sufficiently dense to protect the iron from con-

* To be continued. † See p. 290, ante.

tact with the atmosphere. The investigations of the Commission in 1850, respecting the fall of the bridge over the Maine, at Angers (recorded in "les Annales des Ponts et Chaussées," vol. 29, 2nd series, page 394), appear to prove that the preservative action of the lime depends upon its being in immediate contact with the iron, and that if a space, however small, be left between the two substances, moisture will insinuate itself, and in course of time produce active oxidation. M. Vicat, in a note inserted in the "Annales des Ponts et Chaussées" for May and June, 1853, appears to doubt the correctness of this conclusion, but even he admits that the preservative action of the lime depends upon its absorption of carbonic acid gas, and that directly its hardening ceases, it loses its power of resisting the action of the atmosphere on the iron.

M. Payen found that the addition of very small quantities of the sub-carbonate of potassa, or of sodium, to pure water, was sufficient to render it innocuous either to cast or wrought iron, and the same property existed in nearly all alkaline solutions; whilst, on the contrary, the addition of a small quantity of the chloride of sodium rendered the process of oxidation much more rapid than it usually is in pure water. It appears that grey cast-iron is more susceptible of destruction by oxidation than either wrought iron, or white cast iron; and that wrought iron resists the action of sea water more effectually than cast. It is a peculiar fact connected with this subject, that iron exposed to frequent displacements, shocks, or vibrations, is less affected by oxidation than when it remains constantly in one place, without disturbance. Thus, anchors in constant use are less exposed to rust than those preserved in the magazine: the rails of the main-lines of railroads are less corroded than those in the sidings: iron steamers rust less when in active service than when in dock. But the positions in which iron decomposes with the greatest rapidity, are those where it is fixed, and alternately exposed to the air and immersed in sea water. Ammoniacal and sulphuric acid gas exercise very serious effects upon the durability of cast and wrought iron. It is important, therefore, to prevent their use either in urinals, roofs over gas-works, or the engine-sheds of railway stations. There appears also to be some danger in using iron in contact with sulphate of lime, or in fact under any circumstances where it is likely to take up sulphuric acid gas, for which it has great affinity.

The galvanization of iron, which, as generally practised, consists in forming a superficial coating upon the metal by immersing it in melted zinc, appears to constitute an efficient protection, so long as the iron is covered. The contact with the zinc brings the iron into an electro-negative state, and it is known that, so long as the latter prevails, there is little tendency on the part of the iron to combine with oxygen. From a series of experiments made at Brest between the years 1842 and 1851 (see note by M. Dehargne, "Annales des Ponts et Chaussées, 1851"), it appears that the zincing process does not, in any sensible degree, affect the tenacity or the ductility of the iron; but it is important to secure the protected metal from any shocks, or friction, likely to remove the surface.

Zinc, when exposed to the atmosphere in its ordinary state, becomes rapidly covered by a whitish efflorescence, which adheres to the metal, and forms, as it were, a species of varnish, capable of arresting any further decay. This efflorescence is considered to be a carbonate of zinc; but if the atmosphere should contain any sulphuric or hydro-chloric acid (as in London and in the immediate neighbourhood of the sea), compounds are formed of a nature to compromise the solidity of the metal. In the purer atmosphere of Paris, and other continental towns, where wood is the ordinary fuel, and to which the sea air does not reach, zinc is employed successfully for roofing purposes: in London and on the sea-shore, its durability is very limited; and at all times its combustibility must be a serious objection to its use externally, especially for roofs.

Copper resists the action of the atmosphere very successfully, and the presence of some of the gases mentioned above does not seem to affect it in any material degree. A film of oxide, or carbonate of copper, is rapidly formed over the surface, and secures the metal from further decay. It is found, however, that a mixed metal or bronze, made of copper and zinc, resists the influence of the atmosphere, and sea water, more successfully than pure copper alone.

Lead undergoes little change upon exposure either to air or water, especially when the latter contains small proportions of the salts of lime. According to Brande, when lead is kept in distilled water, to which air has access, small crystalline scales of oxide of lead are formed, a portion of which dissolves in the water, and is again slowly precipitated in the form of a carbonate. Soft water also, or that without the salts of lime, appears to be more likely to attack lead than that containing lime. The use of lead for cisterns must, therefore, be regulated by the nature of the water to be preserved in them: for all roofing or analagous purposes, there do not appear to exist any philosophical reasons to object to the use of this metal, or to limit its application to any particular districts.

A very important remark with respect to the use of metals must be made; viz. that when two of them are used in contact in positions where moisture, in any form, has access to them, a species of galvanic action is established, which causes them to decay with great rapidity. Illustrations of this may be observed in iron railings, when the bars are secured to the stone curb with lead, and the decay is most evident when the iron is of the best and most malleable description. A similar phenomenon may also be observed when copper, or bronze, is in contact with iron in sea water: though the iron decays rapidly, it appears to exercise a protective influence upon the copper.

The laws of electricity, developed by the contact of two metals with a liquid containing a solution of an alkaline salt, are treated at some length in Vol. 1, "Gmelin's Hand-book of Chemistry," p. 364. From this authority it appears that zinc, tin, and iron, protect copper in sea water. Zinc protects iron and tin plate, but it is not so effective for the defence of iron in sea water if air be present, and it is itself rapidly corroded when used with iron in the sea. In that element tinned iron decays unequally, the iron oxidating whilst the tin remains intact; and it appears that the decay, superinduced by the contact with tin, is greater than that resulting from the contact with copper. The corrosion of copper may be considerably retarded by fastening to it at several points pieces of cast or wrought iron, or of zinc, when sulphureted hydrogen is likely to be present. Water containing bicarbonate of lime will deposit the lime if placed in contact with zinc and copper, the deposit taking place upon the copper; and when water of this description flows through leaden pipes, the carbonate of lime is deposited at the solder joints (composed of an alloy of tin and lead), on the brass cocks, and on any piece of iron or silver which may be introduced. The inconvenience arising from the stoppage thus produced may be obviated by the use of a lateral pipe fitted to the main at intervals, and furnished with plugs of a metal likely to deposit the calcareous matter, which can thus be withdrawn from the main.

The class of atmospheric influences included under the term medial action in the early part of this paper acts more powerfully upon some of the metals than on other building materials. Thus the tenacity of the former increases or diminishes with the temperature, and the electrical state of the atmosphere frequently modifies their powers of resistance. The most elaborate observations which have been made on this subject have been exclusively connected with the changes superinduced in iron, perhaps on account of its more general employment. They are to be found in Mr. Fairbairn's Treatise on the Application of Cast and Wrought Iron, and in a communication by M. Wertheim to the Annales de Chimie et Physique (3rd series, Vol. 12), from both of which it appears that the co-efficient of resistance of the metal diminishes with an increase of temperature in a more rapid proportion than the dilatation. Below and near the freezing-point cast iron becomes exceedingly brittle, but between about 40° and about 120° Fahrenheit there does not appear to be much change in its elastic powers. The lineal dilatation of metals, and indeed of all building materials, requires to be carefully attended to in all constructions. Very useful tables upon the subject are to be found in Weale's Engineers' and Contractors' Pocket-book for 1854, and in the Annuaire du Bureau des Longitudes.

Glass under certain circumstances is affected by the action of the atmosphere, for the potash and soda employed in its manufacture are susceptible of being decomposed and removed by the moisture, or the gases contained in it; and according to Gmelin the decomposition takes place with greater ease in proportion as the glass is richer in the above-named alkalies, and the temperature of the moisture of water is higher. Glass in which there is a deficiency of silica is exposed to this description of decay, which may often be distinctly perceived in window glass, the alkali from which is gradually attracted ("Knapp's Applied Chemistry," vol. 2, p. 8) by atmospheric moisture and washed away, whilst a thin layer of silica or silicate of lime remains upon the surface and exhibits a play of prismatic colours. An analagous decomposition takes place in the glass used in stables in consequence of the ammoniacal gases; and, according to Knapp, glass containing oxide of lead is liable to blacken on exposure to air impregnated with sulphuretted hydrogen.

The chemical changes produced in oleaginous and metallic pigments by the gases contained in the atmosphere are subjects of the highest importance to the decorative artist, but as the examination of them would extend this paper too far beyond the usual limits, I must refer the architect who would investigate them to the researches of M. Chevreul in the Mémoires de l'Académie des Sciences, 1850 (vol. 22). I may, however, state that M. Chevreul attributes the solidification of paints to the oils they contain absorbing oxygen from the atmosphere, and states that the driers act by facilitating the power of absorption. The various substances introduced to communicate colour appear to affect the rate of absorption; and the surfaces upon which the paints are applied have an influence independent of their mere capacity of taking up moisture. The varieties in the rates of drying upon the several woods and metals, experimented upon by M. Chevreul, indicate some peculiar differences in this respect, which have not hitherto been sufficiently examined.

G. R. Burnell.

CHURCH-BUILDING NEWS.

Ripon.—The Cathedral east window is now placed. The cathedral is thrown open to the public from 1st to 15th August, between 11 and 6 each day.

Naburn.—On Thursday in last week, a new church was opened and consecrated at Naburn, near York. The entire cost of the church is about 2,400*l.* obtained chiefly by subscriptions, but there still remains a deficiency of nearly 200*l.*

Lincoln.—On Thursday in last week also, the foundation-stone of the new church about to be erected in the parish of St. Michael-on-the-Mount, Lincoln, was laid by the Earl of Harrowby. The church, when finished, will consist of a nave with ritual chancel, having an apsidal termination, a transept on south side, and a triforium, caused by variation of levels on the north side. The church will have a south-west porch, constructed for a future tower. It will be lighted at the west end by a five-light window, and by double-light windows on the north and south, except the transept, which will have a four-light window. The ritual chancel will be elevated above the nave, and divided by a low breast wall, and on the south from the transept by an open screenwork of wood — the arcading of the triforium being trefoliated upon shafts of polished Lincoln stone. A small belfry will surmount the sanctury arch. The building, it is said, has been designed with regard to its proximity to the cathedral below which it stands. Mr. S. S. Teulon is the architect, and the building is entrusted to Mr. C. Ward, of Lincoln, builder. About 1,800*l.* have been

raised towards the cost—the Governors of Christ's Hospital contributing 300*l.* besides proposing to place a stained glass window at the east end of the church.

Halstead (Essex).—A new vicarage-house has just been erected here for the Rev. D. Fraser, at a cost of 1,200*l.* Mr. William White, of London, was the architect, and Mr. Woollard, of Essex, was the builder.

W tford.—The external walls of St. Andrew's Church here, are nearly completed. There is still a deficit of about 600*l.* in the sum required to complete the works. The contract with Messrs. Fassnidge amounts to 2,400*l.* of which 1,500*l.* are due when the external walls are completed. To put on the roof requires a further sum of 350*l.* Mr. Teulon is the architect of this building.

Chalfont St. Peter.—On 21st ult. the Bishop of Oxford consecrated the parish church of Chalfont St. Peter, Bucks. The chancel of the ancient church had been re-built, and a new south aisle added, and the church otherwise enlarged and re-modelled. The work has been executed under Mr. Street, of Oxford, the diocesan architect.

Newport.—St. Thomas's Church, says last week's *Hampshire Advertiser*, will in a few days be rased to the ground. The work of demolition had already begun.

Warwick. — The foundation-stone of All Saints' Church, at Emscote, was laid by the Countess of Warwick on Tuesday in week before last. Mr. Murray is the architect.

Coalbrookdale.—The new church of the Holy Trinity was consecrated on Tuesday in last week by the Bishop of Hereford. The church is in the Decorated style of fourteenth century, and consists of nave and side aisles, with chancel and chancel aisle. The interior dimensions are 106 feet by 44 feet, and the church has accommodation for 420 adults and 108 children. It has an open timbered roof, with principals resting on carved stone corbels. The seats have oak bench-ends, made by the London Patent Carving Company. The window at east end of chancel, and the window in chancel aisle, are glazed with Powell's patent embossed quarries; and one of the windows in south aisle is filled up with some foreign stained glass. The font, of Caen stone, is placed at the west end of south aisle. The edifice is provided with an organ, by Walker, of London, the gift of a lady, and cost about 500 guineas: it is enclosed in an oak carved case, and illuminated by Willement, of London. The building will be heated with warm water, and lighted with gas. The tower is erected at the south-west angle of the church. The architects are Messrs. Reeves and Butcher, of London. The site for this structure and for the burial-ground is the gift of Miss Adelaide Anna Darby, and the building has been erected and endowed by Mr. Abraham Darby.

Chester.—The Church of St. John the Baptist and the Blue Coat Hospital in Chester was re-opened for Divine service on Sunday in last week, after a lapse of nearly thirteen months, occupied in the repair and restoration of the exterior and the re-arrangement of the interior. The pews have been replaced by open seats or stalls, mostly free. The tables containing the Decalogue have been restored to the east end, whence they were removed about fifteen years ago; and over them is placed an ornamental window, containing in the centre a figure of St. John the Baptist preaching in the Wilderness. In a panel above is placed a figure of a lamb bearing the banner of the cross, and in the margin on either side is a running branch of the vine, interspersed with ears of corn, emblematical of the bread and wine. The ornamentation of the window has been executed by Mr. S. Brown, of Chester. The whole of the work of the interior has been stained and varnished in imitation of oak by Mr. Tasker, also of this city.

Sale Moor (Manchester).—The church of St. Anne, Sale Moor, was opened on 14th ult. The church, which is built on a site presented with a donation of 500*l.* by Mr. Samuel Brookes, of Manchester, is in the decorated style of fourteenth century. The tower is at the north-west angle of nave, and is three stages high. In the basement is the principal entrance, beneath a bold canopied doorway; above this a two-light window, with tracery. At the corners of the tower are angle buttresses, over which, supported by gargoyles, are crocketed pinnacles, terminating in finials, the summits of which are 70 feet above the ground line. The parapet is composed of open tracery. Surmounting the tower is a spire, 60 feet high. At the east end is a five-light window; at the west-end, one of four lights; the side windows two and three lights alternately: the transepts have three-light windows, the whole filled with tracery. The buttresses are in two stages, the whole being built of stone. The extreme length of the building is 100 feet, and across the transepts 60 feet. Part of the roof is open timbered, the intersection of nave, chancel, and transepts having a groined ceiling, in imitation of stone arching. The edifice has been completed from the designs and under the superintendence of Mr. W. Hayley, of Manchester, architect. The cost, including endowments and fittings, is 4,200*l.* nearly all raised by voluntary contributions, chiefly from the neighbourhood. The building contains nearly 600 sittings, one-third free. A marble font has been presented to the church by Mr. Earl, and a stained window for the vestry by Mr. Hurlbutt.

Pennington, Leigh. — Pennington Church, Leigh, near Manchester, was consecrated a few weeks back by the Bishop of Manchester. This church originated with the dissatisfied parishioners of the vicar of Leigh. The minister of Astley collected 1,000*l.* the largest subscription only amounting to 2s. 6d. and the lowest to 1½d. the greatest number being in single shillings. The church is built of Yorkshire stone, and is in the Perpendicular style. It consists of nave and side aisles, with clerestory supported by six arches on each side. The church is 70 feet by 50 feet. The chancel is 33 feet by 20 feet, with an open-timbered roof, stained and varnished. There is a tower that will hold eight bells. The principal entrances are by the tower and south porch. The edifice was built from the designs of Mr. E. H. Shellard, of Manchester, by Mr. Mark Fogget, of Manchester, the contractor; and the work was superintended by Mr. Samuel Drinkwater, as clerk of works. The building seats 800, partly free. There remains to be erected a parsonage-house and schools, for which funds are yet to be collected.

Shotton.—The church at Shotton, in the county of Durham, was consecrated on 11th ult. The new edifice will be a chapel of ease to the parish of Easington. The church, which is from a design by Mr. P. Hardwick, is in the Early English style. Mr. Thomas Punshon, of Durham, was the builder.

THE VICTORIA LONDON DOCKS.—A SKETCH OF THEIR PROGRESS.

So enormous has now become the extent of London, that works of the greatest magnitude are carried on almost unknown, except to those dwelling in the particular neighbourhood; and as the spot on which the Victoria Docks are situated is a place scarcely inhabited even now, few of the people of London know that this great work has been commenced, and fewer still that the largest dock in the world will be open for reception of shipping early next year.

The engraving shows the present appearance of the works, although it is difficult, in one picture, to give a true idea of the extent. The plinths of pillars, &c. which stand up from the excavated space are intended for warehouses and quays. There will be four of these large warehouses. They will be three stories in height above the water.

The Victoria Docks are situated on the northern bank of the Thames, on an open tract of land extending from Bow-creek to Galleon's-reach, known as the Plaistow-marshes, and will have ready access to the heart of the City, and be placed in direct communication with all the great railways in the kingdom.

The works, which are authorised by the act of Parliament, are a wet dock and a tidal basin on the western side, with an entrance from the river a little below Bow-creek, as well as a canal on the eastern side of this dock, with proper basins and gates, to form another entrance from the Thames at Galleon's-reach. It is intended to confine the undertaking, for the present, to the formation of the western dock and tidal basin, and to the purchase of the land which will be necessary for the formation of the canal and other extensions at some future time.

The western dock and tidal basin will afford, together, an area of water accommodation of 90 acres, and upwards of a mile of quay and wharfage room, together with 160,000 feet of fire-proof warehouses, adapted for the reception of every description of merchandise. The landing jetties and warehouses will be fitted with rails communicating with the main line of railway, so that goods may be taken from the ship to all parts of the kingdom, without the delays, waste, and cost attendant upon housing and unhousing, and repeated removals from one place to another.

The dock shown in the engraving, only one of those which are proposed, is formed by the excavation of upwards of 2,000,000 cubic yards in quantity. It is 311 feet long, and 8 feet in width, with 10 feet of water at Trinity low-water level. The quantity of land purchased for the whole undertaking is 200 acres, at a price of 425,000*l.*

A short time ago the site of the Victoria Docks was a lonely and solitary place; and it is curious to consider that the embankment of the Thames, which forms the background of the picture, is of very remote antiquity. In the course of the works, various ancient British and Roman coins have been discovered, some Roman urns, a circular shield of tin, bones of deer and some other animals. The ground, which has been excavated, consists of the deposit of the Thames, which, like a huge lake or sea, formerly covered all the now green marshes of Essex. At a depth of 15 feet below high-water mark, a layer of peat, 7 feet in thickness, is met with: below that (in all 22 feet) is gravel.

The dock shown in the engraving will contain about 90 acres of water, and will, from the peculiarity of its position, cost less, it is said, than any at present formed.

	Capital.	Area of Water Accommodation	Cost per Acre.
	£	Acres.	£
St. Katherine's	2,152,800	11	195,640
London Docks	3,933,310	28	140,654
East and West India Docks, including Canal and Pond	2,003,000	112	17,884
Proposed Victoria Docks, estimate for Works and Land, to be occupied therewith	450,000	90	5,000

It is surprising to consider the immense increase of commerce of London, which, like the population, is growing at a compound rate of multiplication. In the five years, 1823 to 1827, both inclusive, the average number and tonnage of British and foreign vessels and of colliers and coasters which entered the port of London was—

From beyond sea, 5,006 vessels = 917,087 tons.
Colliers and coasters, 18,913 vessels = 2,304,528 tons.

And in the five years, 1847 to 1851, both inclusive, there were—

From beyond sea, 9,839 vessels = 1,943,348 tons.
Colliers and coasters, 21,679 vessels = 3,154,180 tons.

In 1851, the number of British and foreign steamers which entered the port of London (exclusive of steam-tugs and pleasure and passenger steamers) was 2,641, with a tonnage of 717,969 tons.

Since 1849 the importation of animal food into the Thames has largely increased the numbers.

The company is empowered by the Act of Parliament to provide pasture accommodation for the large quantities of Scotch and foreign cattle which are now brought for the supply of the metropolis, and which, arriving in an exhausted and deteriorated condition, are driven to market without the rest and refreshment necessary for their recovery.

The basin will be formed partly of brick and partly of concrete and stone. Mr. Bidder is the engineer, and Messrs. Peto, Betts, and Brassey are the contractors.

PROGRESS OF THE VICTORIA LONDON DOCKS.

PROVINCIAL NEWS.

Oxford.—It was stated some time ago, that it was in contemplation to rebuild the chapel, library, and rector's lodgings at Exeter College. Plans for this purpose, says *Jackson's Journal*, have been submitted by Mr. Scott, the architect, and have met with general approval. The chapel will be rebuilt on its present site, but extended eastward over a part of the ground now occupied by the rector's house. A new and enlarged quadrangle will take the place of the small court known as St. Helen's, two sides of which will be occupied by the new library. Some additional buildings will also be erected in Broad-street, where the poplars now stand. It is intended to commence operations shortly, but the whole work will be extended over a space of at least two years.——Considerable improvements have been effected at the Radcliffe Library, with a view to make it more useful, and better adapted for literary and scientific meetings. Gas has just been laid on, and the building will be illumined by fourteen lamps, arranged in various parts of the upper gallery, a number placed on the reading-tables below, and a branch light in the centre. The building, which was formerly heated by gas stoves, is now heated by hot water, the apparatus for which has just been completed. These improvements are mainly owing to the present librarian, Dr. Acland. The whole of the heating and lighting apparatus has been entrusted by the trustees, under the advice of Mr. G. Gutch, their architect and surveyor, to Mr. J. H. Monks, of London, by whom the bronze gas pillars ranged round the library were manufactured.——On a recent occasion the directors, and Mr. Gardiner, the builder, of the new Crescent on the Park Town Estate, on the Summertown-road, entertained all the workmen, about 130 in number, who have been employed on that large undertaking, which is now nearly brought to completion. The architect is Mr. S. L. Seckham.

Sandon.—In June, 1848, it may be remembered, Sandon Hall, the residence of the Earl of Harrowby, was almost entirely destroyed by an accidental fire. The new building is rapidly nearing to completion. The site of the present edifice is the same as that of the former mansion. The building is of the style of James I. and is erected after the designs of Mr. William Burn, of London. It is built wholly of freestone quarried in the park. It has two principal fronts, the northern facing the ancient church of the parish of Sandon; the latter commanding an extensive view of the valley of the Trent. The offices lie to the west, and also occupy the basement story. The south façade exhibits the whole length of the building, extending 220 feet. The windows are surmounted with rich scrolls, bearing the initials of various members of the Harrowby family. A cornice, surmounted by a balustrade, runs along this front, and a number of light pinnacles spring from it. The chimneys are of stone, and ornamental, some being spiral, with mouldings and caps. The north front is far more varied in character than the opposite one. In the centre a large porch projects, supported by pillars, ornamented in accordance with the style of the building. A cornice, with an open balustrade, surmounts the porch, in the centre of which the arms of the Harrowby family are carved. At the angles of this porch square turrets rise to the parapet of the building, above which they are octagonal. They are covered by ogee roofs, surmounted by gilded vanes. The entrance porch opens into a saloon, to the right of which is the grand staircase, and to the left the billiard-room. This front is approached by a carriage drive through the park. The first stone of the new mansion was laid by Viscount Sandon on the occasion of his attaining his majority, January 16th, 1852. The clerk of the works is Mr. M'Leish, and the contractors are Mr. Parker, who has executed the masonry, Messrs. Jas. Paton and Sons, who have done the wood work, and Mr. James Annan, the contractor for the plastering.

Huntingdon.—The Hunts County Hospital has been completed and opened. It stands on an eminence on the northern side of the town. The entrance-hall, in the centre of the building, faces the north: the principal front is to the south; the females' entrance at the west, and the men's at the east. The building has the shape of a parallelogram, the entrance-hall forming a central pediment. The style of architecture is Roman, of or about the period of Palladian. The building was begun on 28th of May, 1853. The architect was Mr. T. Smith, of London; and the builder was Mr. Bird, of Huntingdon. The hospital contains four wards; two of ten beds each, and two of four beds each. The length of the building is 104 feet; height, 34 feet to cornice; and width, 72 feet. The cost was about 5,000*l.*; and the subscriptions raised were between 8,000*l.* and 10,000*l.*

Nottingham.—The plans, &c. for the new Nottingham Government School of Practical Art, for which a site has been secured on the angular elevation of Waverley-street and Peel-street, adjoining the north-western lodge of the Arboretum, are now being exhibited at Nottingham. The ground plan exhibits a front colonnade and vestibule entering on a square central hall, surmounted by central ceiling, and lighted by dome lights in the angular spaces. The great hall is flanked by two oblong apartments for museum and library. Behind it are smaller gallery stores, and in the rear of all a rotunda, with a central circular ceiling light.

Wolverhampton.—The formal opening of the new building for the Wolverhampton School of Practical Art was to take place on Tuesday, in presence of Lord Granville. The building, which has been erected from the designs of Mr. Edward Banks, of Wolverhampton, architect, is situate in Darlington-street, near the centre of the town. The style is Grecian. The exterior design consists of the principal façade towards Darlington-street, having projecting wings at each end, and the entrance façade in a new street leading from Darlington-street to Salop-street. The architectural features of these elevations consist principally of a rusticated basement and Corinthian pillars, surmounted by a cornice, the door and windows having characteristic dressings. In the Darlington-street front there are several panels of stone, which are intended to be sculptured at some future time. The basements, pilasters, cornices, and window dressings are of Bath stone, and the walls of white brick. The interior design consists of a basement, with house for the assistant secretary, and cellars to be let off; a ground-floor story, with committee-room, master's room, and large elementary and modelling rooms, and a one-pair, or upper floor, with library, painting room, and large antique room, lighted by skylights.——The Wolverhampton Baths, erected by a company of shareholders, having been found unremunerative, have been sold, with 1,350 square yards of building land adjoining, for 1,700*l.* to the town clerk, for himself and others, by whom the baths will be continued to the use of the public. It is said to be the wish of the company to construct on the adjoining piece of ground an open bath, applicable to the requirements of the working classes. The property cost the original shareholders 4,000*l.*

Merthyr.—The surveyor newly appointed by the local Board of Health is to have a salary of 250*l.* a year. There were thirty-two applicants, out of whom five were selected, who attended at a meeting of the board, when the decision was unanimously made in favour of Mr. Henry.

Liverpool.—A new gas company is about to be established here to supply the borough with gas at 3s. 6d. a thousand cubic feet, while yielding a profit of 10 per cent. and with a promised reduction of price to 3s. as soon as the profits exceed 10 per cent. The Legislature bound the old (amalgamated) company to reduce their price in a somewhat similar way, but for years they have managed to evade the law by expending their extra profits beyond 10 per cent. as additional capital in laying miles of pipes beyond the borough boundaries, so as to afford a pretext for reaping their 10 per cent. on the whole of this comparatively waste capital, as well as on the nominal amount of their original shares, and thus the public have been deprived of the advantages designed by the Legislature to be reaped by them and not by the shareholders. We advise the people of Liverpool to make it a *sine quâ non* that there shall be no more amalgamations, which work wonderfully well for the public advantage *theoretically* speaking, while all the practical benefit goes into the pockets of the amalgamators. Not only do the new company propose to reduce the price of gas, but what is still more essential in the present instance, to improve its quality. The old company regularly reap their 10 per cent. or highest legal profits on an exaggerated amount of capital, nevertheless they supply an article which is perpetually complained of for its badness as well as for the unworthy means whereby its price is upheld beyond the intention of the law as laid down in its charter of incorporation.

Preston.—At the last half-yearly meeting of the Preston Waterworks Company, prior to the works passing into the hands of the local Board of Health, a dividend was declared of 3*l.* 10s. per share—equal to 14 per cent. per annum. The previous half-year's dividend was 3*l.* 7s. 6d. The proprietors, according to the local *Chronicle*, will receive out of the purchase-money of the works about 116*l.* 10s. for each 50*l.* share, free of all payments. The entire working expenses, on the average of the last five years, were only 18 per cent. on the income. The company has between 13,000 and 14,000 customers, nine-tenths working class, occupying houses at 10*l.* a year and under, average charge for water, 8s.

Stockton-upon-Tees.—The *Gateshead Observer* remarks that fifty years ago, a ship-building yard at Stockton-upon-Tees was occupied at an annual rental of 30*l.*; and that part of it has recently been sold for iron ship-building at 4,000*l.*

Newcastle-upon-Tyne.—The foundation stone of the ragged schools of this town was laid by the mayor on Tuesday in last week, at Garth-heads, New-road. The new building, according to the local *Courant*, will be a plain unpretending structure of brick. It will contain boys' school-room, 53½ feet by 18½ feet; boys' work-room, 37 feet by 28½ feet; class-room, 19 feet 7 inches by 16 feet; girls' school-room, 53½ feet by 18½ feet; girls' work-room, 30½ feet by 28½ feet; store closets, each 10 feet 9 inches by 6 feet; two baths and wash-rooms, 18 feet by 6 feet; a committee-room, 15 feet by 11 feet. The building will be one story, except the master's house. This will contain three stories, the uppermost dormitories for the children. The builder is Mr. Gibson. The estimated cost of erection is about 2,500*l.* It is expected that the schools will be completed and ready for use about January next.

Shields.—Labourers are excavating for the foundation of the new Sailors' Home at North Shields. Mr. Elliot, the contractor, is erecting sheds for the stone dressing. The stonework for the foundation will be proceeded with immediately. The chief stone will be laid by the Duke of Northumberland some time in the spring of next year, and the whole, it is anticipated, will be completed in the latter part of 1855. The building will be erected under the inspection of Messrs. Green.

Edinburgh.—This city, it is said, is to have a new post-office, the present building not admitting of suitable extension.

Jersey.—At the St. Catherine's Bay works, according to a correspondent of the *Jersey Times*, much has been done during the last two years. The verclut or northern arm of the breakwater is nearly completed: the whole of the lower portion is finished; and the upper portion is completed to 1,500 feet from the inner angle, which is 100 feet from the main land. The promenade-walls are completed to 1,300 feet, and are within 200 feet of that distance filled in: the southern end of the breakwater, not yet completed, is proceeding rapidly, as are also the inside walls and quay. The outside walls have a curve of one in three, according to the plan of the late Mr. Wilkinson, who was Mr. Walker's engineer on the works when they were commenced. About six months will serve to complete this arm of the breakwater. The arm from the Archiroudel Tower, without which the harbour would be worse than useless, has not been worked at since 1850. It would have to be carried out about 3,000 feet. 150 men only are now employed on the works: they are said to be picked men, however, and receive 3s. a-day.

BATHS AND WASH-HOUSES.

We have noted with interest, in a Return just now issued by the Committee for Promoting the Establishment of Baths and Wash-houses for the Labouring Classes, the gradual but increasing progress of the business of the baths and wash-houses in the London district, and we insert in this place a table of the numbers of the bathers and washers, and the receipts at nine establishments which are conducted under or in accordance with the Acts 9th and 10th Vict. c. 74, and 10th and 11th Vict. c. 61:—

Period of the Year.	Bathers.	Receipts.	Washers.	Receipts.	Total Receipts.
1854.		£. s. d.		£. s. d.	£. s. d.
Lady-day Quarter	144,502	2,140 3 0	84,822	1,607 18 4	3,748 1 4
Midsummer ditto	318,967	4,325 14 10	69,171	1,204 13 0	5,530 7 10
Total	463,469	6,465 17 10	153,993	2,812 11 4	9,278 9 2
Same time last year	370,880	5,299 10 8	122,450	1,801 0 1	7,100 10 9
Showing an increase in six months in this year	83,589	1,166 7 2	31,543	1,011 11 3	2,177 18 5

In the enumeration of the business in the metropolis during the half-year ending on the 30th of June last, we must not omit to mention that the receipts at the George-street, Euston-square, and Lambeth establishments, which are not regulated by the public Acts, have amounted to the further sum of 1,847*l.* 1s. 3d. being the revenue derived from 83,278 bathers and 64,619 washers additional.

When it is borne in mind that in the year 1848 there were but two establishments open in the metropolis, and, moreover, that the income from the bathers and washers then amounted, *during twelve months*, to only 2,896*l.* 5s. 1d. it will at once be apparent that the large increase in the practice of bathing is owing, in a great measure, to the extension of the system. We think these results may be regarded with much satisfaction, and it affords us pleasure to learn likewise "that two establishments are now in course of erection in the important district of St. George's, Hanover-square; and also that the commissioners appointed by the ratepayers in Clerkenwell parish will proceed to build baths and wash-houses so soon as they can meet with a site of adequate dimensions in a suitable locality, and convenient of access for the inhabitants of that densely-crowded district."

Before concluding, we would venture to remark, that the material aids of health are cleanliness of person and apparel: no pains, no expense should be spared to preserve the life and health of the great mass of the people, the working poor.

KILKENNY ARCHÆOLOGICAL SOCIETY.

The July meeting of this society was held on the 5th inst. Mr. D. M'Evoy, Urlingford, presented a magnificent specimen of the antique bronze cauldrons which seem to be peculiar to Ireland. It was found on the 23rd May last, in cutting turf in the Bog of Allen, property of John Latouche, esq. The bottom piece of the vessel presents an admirable specimen of hammered work, forming in itself, without joint or seam, a perfect bowl, 6 feet 6 inches in its greatest circumference, and diminishing upwards to 6 feet. This remain of antiquity obviously must have been in the position in which it was found for very many centuries, as not only was it lighted upon at a depth of 7 feet from the surface, and at a distance of a quarter of a mile from the arable land forming the outside margin of the bog, but the surrounding peat had evidently never been disturbed.

Mr. Feehan presented an ancient cast-iron chimney-back, in size 1 foot 11 inches by 1 foot 3 inches. The margin was adorned with raised scroll-work and flower patterns, and it bore in the centre a bas-relief representing a thief unsuccessfully tempting with meat a dog which was guarding the doorway of a house. Above was the motto, "*Fides dona superat*;" and below the date 1656.

Mr. Graves took occasion to mention another instance of the good feeling fast growing up in the community with respect to the preservation of antiquities. The ornamental stone chimneys of the old house of the Roth family, commonly known as Wolf's Arch, having become dilapidated and dangerous, he had offered to have them repaired at the expense of the society, as he apprehended either that they would fall, or that the authorities would order them to be taken down as a nuisance to the public, which would seriously deface one of the finest of the Elizabethan houses remaining in Kilkenny, as had already been the case with regard to two of the old houses in High-street. Mr. Preston had, however, at once taken the expense on himself, declining to allow the necessary reparation to be a burthen to the society, and he had taken down and carefully re-erected the stonework of the chimneys, preserving strictly their ancient character.

Sir Erasmus D. Borrowes, bart. forwarded the following curious extract, with others, from the old Dublin newspaper termed *Pues Occurrences*, vol. 35, No. 8, January, 1737-8: "John Walsh, who keeps the Kilkenny stage-coach, gives notice, that he will set out from Dublin and Kilkenny precisely at seven o'clock in the morning, on every Monday and Thursday, during the summer, and run through in two days (accidents excepted). Twenty pound weight of luggage will be allowed to every person, and 1d. per pound to be paid for all weight over."

Mr. H. P. Clarke described a small stone sepulchral cist, discovered at Kilcreene, near Kilkenny, in May last. He said:—"As to the age of this tomb, which evidently belongs to the period when it was the custom to burn the dead, I understand this practice had totally disappeared about the eighth century, the practice having been expressly forbidden by Irish ecclesiastical canons about this period; so that we cannot, according to this view, assign to it a less antiquity than 1,000 years."

Papers were then read "On the Irish Pewter Coins of James II." by Aquilla Smith, M.D. M.R.I.A.; "On the Runic Crosses of the Isle of Man," by Mr. John Windele; &c.

IRISH BUILDING NEWS.

The Commissioners of National Education intend building a large District Model School at Belfast, at the junction of Ardmoulin-street and the Falls-road. The main buildings facing the Falls-road will have a frontage of 126 feet by a depth of about 120 feet, with boys', girls', and infants' playgrounds, and all requisite out-houses. Central, on the principal story, is an entrance-hall. A boys' school-room, 81 feet 10 inches by 30 feet, with pouch, cap, and class-room; and an infants' school-room, 60 feet by 30 feet, with cloak and bonnet-room in connection therewith, and staircase leading to girls' school, &c. Urinals, privies, and sheds, are provided in the playgrounds. The style of architecture is that which prevailed about the year 1600; the front elevation presenting a centre projection, 23 feet wide, with cut stone pilasters, terminated by finials, and a semi-circular oriel (with mullioned and transomed lights and characteristic tracery at top), corbelled over entrance doorway; the whole terminated by a gable with projecting finial. Mr. F. Darley is the architect.

The large railway hotel at Killarney has been opened. The plan is quadrangular, with projecting wings. The front is faced with granite from the county of Wicklow, procured at a considerable expense. An assembly-room, 80 feet by 20 feet, with ornamental ceiling, and retiring-rooms off same, also private apartments for small families, with, we believe, 130 bedrooms, are provided. The furniture is supplied by Messrs. Jones and Son, Dublin; the gas manufactured by the company, and ironmongery by Mr. Glenton, London. Mr. Darley is the architect. In the competition for this building instructions were issued by the company that the expenditure should not exceed 6,000*l.*; but we are credibly informed that 18,000*l.* is nearer the sum incurred in its erection. Messrs. Atkins and Brash, of Cork, were each presented with a 50*l.* premium.

New buildings have been lately completed in connection with the Kingstown railway terminus, but the style of the flank elevation at the harbour side (which consists of a series of projecting piers and a continuous frieze, with massive corbels, surmounted by a parapet), is stated to have an inharmonious effect with the classic style of the main building. Mr. Mulvany was the architect.

COMPENSATION CASE.—PIMLICO IMPROVEMENTS.

THE COMMISSIONERS OF HER MAJESTY'S WORKS, AND THE TRUSTEES OF THE LATE RALPH WARD, ESQ.

On Friday, the 28th July, a jury was sworn before Francis Smedley, Esq. in his court, as High Bailiff of Westminster, to ascertain what damages would be sustained and what recompense should be made to the owners of certain property, situate in Charlotte-street, Stafford-row, and Stafford-place, Pimlico, required for improvements round Buckingham Palace.

The Attorney-General, the Solicitor-General, and Mr. Henry Willes, appeared for the commissioners; Sir Frederic Thesiger and Mr. Charles Pollock for the claimants. Messrs. Tooke, Hallowes, and Price, were the solicitors for the latter.

The property included the Gun Tavern, and various houses in Stafford-row.

Mr. Edward Roberts, Mr. C. Lee, Mr. Thos. Little, and Mr. George Godwin, were the witnesses called for the claimants; and their valuations were as under:—Mr. Roberts—23,075*l.* 16s.; and 25 per cent. for compulsory purchase, 5,768*l.* 19s. 0d. Mr. Lee—21,015*l.*; 15 per cent. for compulsory sale, 3,152*l.* Mr. Little—21,332*l.* 9s.; 20 per cent. for compulsory sale, 4,266*l.* Mr. Godwin—22,754*l.*; 15 per cent. for compulsory sale.

On the part of the commissioners, Mr. D. Norton gave evidence that he valued the property at 15,001*l.* which included 10 per cent. for compulsory sale. Mr. Tite said he valued it at 15,103*l.* making same allowance for compulsory sale. Mr. Shaw valued it at 15,293*l.*; Mr. Hardwick at 15,670*l.*; and Mr. Pennethorne, at 15,272*l.*

The jury retired for a short time, and then gave a verdict for 20,750*l.*

THE CRYSTAL PALACE.

What benefit will the country derive from the Crystal Palace? is a question often asked, and a question it may be well to answer. It will encourage taste. Before men have seen perfect works (if the word may be used) they are content with inferior ones: neither do they always perceive the essential points required in the imperfect work until they have seen the standard work, when the difference immediately strikes them. The Sydenham collection of architectural specimens, carefully selected by men of experience, will doubtless have a good effect in purifying the design of many of our future buildings. The mongrel edifices that are now-a-days erected in the shape of dwelling-houses around the metropolis are monuments of the want of taste and ill-judged design of the houses for the situations they are placed in. Styles should be suited to localities. A country villa does not look well in a large town; and some houses are more adapted for one situation than another. What can be more odious than our streets in the metropolis and suburbs, built some fifty years ago or more, as Baker and Harley streets, and the King's-road, Chelsea, the New-road, and others of this kind? The tendency of the age is towards improvement, and if the rising generation of architects and the public made the Crystal Palace their studio, we need not despair of being witnesses to works creditable alike to

the designers and to those who furnished them with the means of instruction. The encouragement of a better taste for architecture will not stop there—it will lead to general improvement. Who would leave a pretty house surrounded with a wilderness or dirty streets? The general effect would require consideration and improvement, each surrounding object contributing in some measure to the beauty or uniformity of the whole. It does not require much foresight to perceive how this subject branches off and connects itself with social improvement. The terraced gardens and park, with the engineering and mechanical contrivances, may also be regarded as conducing to the improvement of the taste of the people.

Lastly, it remains but to be hoped that the people will take advantage of what has been done for them by the Crystal Palace Company, and warmly give their support to an undertaking that has for its end their own improvement, remembering that should it fail, the historian will have it to record that the enlightened Englishmen of this generation neglected the means procured for them for increasing their knowledge of true art, to their own loss, and to the cost of their posterity. W. S.

THE TAILORS' BENEVOLENT INSTITUTION AT HAVERSTOCK-HILL.

THE chapel has been enlarged at the expense of one individual. Mr. C. Hayward, architect.

A new bay has been added to the nave, a new chancel and vestry, &c. built, while the interior of the roof has been remodelled.

A side arch in the chancel has spandrils enriched with the olive and vine, and the passion flower and wheat intertwined, with appropriate inscriptions, and is filled in with a screen of metal. The east window has some stained glass by Hedgeland, and represents passages in the life of St. John, the centre being that apostle at the foot of the cross. A memorial window is about to be added on the south side.

MONUMENTS.

A STATUE to the memory of the hero of Trafalgar and Aboukir has just been placed in the Market-place, Norwich. The sculptor is Mr. Milne, of London. The features are copied from a cast taken by Chantrey and a bust by Gahagan. The dress is a representation of that actually worn by Nelson at the moment when he received his death-wound on the deck of the *Victory*, and the statue is cut from a block of fine Sicilian marble. The statue is the first which has been placed in Norwich, and the committee under whose directions it has been erected have not evinced very great discretion in the selection of a site. Nelson is known as the Norfolk hero, and his statue deserved a prominent place in the capital of the county. This honour, however, has been denied it. The centre of the market-place is occupied by four gas-lamps, and these remain undisturbed, while the statue has been placed on a very inadequate pedestal in the corner at which the Guildhall stands. The citizens generally are loud in their reprobation.——The Sheffield papers state that Mr. F. Milnes, of London, sculptor, is another candidate for the execution of the Montgomery monument. Mr. Milnes made a bust of the late poet in 1851. —— A monumental tablet, designed by Thornycroft, has been put up in Shirrall parish church, to the memory of a lady, the late Miss Smyth, of Rock-terrace. The monument is fixed against the east wall in the south transept of the church, and consists of a polished tablet of statuary marble, relieved by a Sicilian marble background. The tablet (which is of Grecian design) has a plinth and base with mouldings, and a cornice ornamented with a *guilloche* band and other enrichments, finished by a segmental arched pediment. Portions of the geometrical lines of the tablet are concealed by drapery, which falls in folds from the pediment to the base on each side. A votive wreath of lilies, sculptured in *alto relievo*, occupies the central or *fess* portion of the monument, and the artist has emblematized the rupture of earthly ties by the introduction of a full-blown flower torn from the parent stem.——A monument has been erected at Montrose to the memory of a late local celebrity, the Rev. Dr. Smith. The monument consists of a base, nearly 3 feet in height; die, 4 feet 8 inches; cope, 1 foot 2½ inches; and an urn, 3 feet; the total height being about 12 feet. It is formed of Aberdeen granite, and the sides of the die are polished. The work was executed by Mr. Donald, of Aberdeen, sculptor.

THE TRIM OF TRAINS IN TRANSIT.

ONE of the strongest reasons why railway guards should have a regular watchman's beat along a train in transit, so as to constitute them really guards or watchmen, we have again and again urged to be the fearful opportunity for the committal of numerous crimes, such as robbery, assaults, abuse of women, and even murder, afforded by the present system. Of such crimes we have had but too frequently occasion to adduce specific instances, as well as other and no less urgent reasons for the particular mode of obviating them on which we have so frequently insisted,—such as, for instance, the singular manifestations of insanity which have been found to be occasionally excited during railway transit—why, it may be difficult to explain, but unquestionable as a fact—independently of all additional risks from the presence of the previously insane; or again, as another instance of actual occurrence, where an engine with a train was flying onwards at the rate of fifty miles an hour without either driver or stoker to guide or stop its course, and when a guard had to scramble over all the carriage tops at the redoubled risk of his life to reach the engine. In all such cases, and in many others, nothing short of a safe and ready means of enabling the guard to pass along from carriage to carriage, and, indeed, nothing less than an established practice of so passing regularly along such a watchman's beat, will (in conjunction with a simple and practical system of signals) secure the public safety during railway transit. Even were it found prudent to allow every passenger the liberty of stopping the train by signalling the guard or driver, of what use would such a liberty be where a robber, a murderer, or other criminally-disposed persons or persons, with whom an unfortunate passenger was cooped up alone, had premeditated the committal of crime under circumstances so unprecedentedly favourable? Good care would be taken, in such cases, that no mere mechanical signal should reach the guard; and we know that even the loud screams of imperilled life are not to be depended on amid the rattle of running trains. The recent occurrence of a death struggle between two ferocious criminals and a policeman, who was nearly murdered in spite of his cries before the train stopped, as it did not do till it reached the usual station, has revived this important question, and startled the public into a consciousness of the necessity for providing against such not unfrequent contingencies. Earl Fitzhardinge has brought it before the House of Lords, and the *Spectator* and other papers before the public; but still all that is insisted on, except by ourselves, is a signalling system between passengers and guards or drivers. Such a system is certainly most desirable, and must be established: even *per se*, it would certainly be vastly better than no preventive means at all. But useful as the signalling system cannot but be, especially when established between guard and driver (and much as we have ourselves urged its adoption), still it is not sufficient, *per se*, as we have said, fully to secure the public safety: it requires as an essential adjunct the arrangement for the guards of some means of passing freely from one carriage to another, so as to enable them to know, and see, and judge for themselves what is going on in every carriage at any time they may choose to appear at its window. It will not do for us to be told that such an arrangement is not possible: it is not only possible, but practicable; and not only practicable, but has actually been adopted on American lines, and also on some Continental ones. On this account an American traveller intimates in the *Times*, that so perillous does he conceive the English system to be (by comparison with the American), that he never travels in an English railway carriage without having a loaded revolver in his pocket, for fear of madmen and escaped convicts!

It must have been the same conviction which induced Earl Fitzhardinge to say, in the House of Lords, last week, that "as matters now stood, the surest place in which a man could with impunity commit an offence of the greatest magnitude, such as murder, robbery, or violence to women, was a railway carriage." and the same that induced the *Spectator* newspaper lately to remark that "of all places there is practically none so solitary for the purpose of the murderer as a railway-carriage. When once the train is in motion, he is absolutely protected against all interference; he may undisguisedly and frankly own his purpose, and the victim has only the choice of remaining at the disposal of his fellow passenger, or jumping out to destruction." It is to be earnestly hoped, then, that we shall not now have much further occasion to reiterate our oft-revived suggestion and warning, ere the only effectual means of prevention, namely, a regular watchman's beat along every train, be enforced by Parliament, whose own "commissioners," some years since, adopted that suggestion, and urged it as a special recommendation to railway companies, by whom it was treated with that silent contempt which was cast upon the signalling system itself till now that the public attention has been determinedly fixed upon it, and that, accordingly, railway directors begin to find that system perfectly practicable, although for many years they resisted its adoption.

Miscellanea.

OLDHAM LYCEUM AND INDUSTRIAL EXHIBITION.—The accommodation of the members of the Oldham Lyceum having been very inadequate, the Working Men's Hall in Horsedge-street, erected by the defunct Socialists, has been taken and adapted by enlargement to the purposes of the Lyceum, under the superintendence of Mr. Dittensor, a local architect. Two large additions have been made, so that now it is, what it was not before, a room sufficient for public meetings. The two additions are corrugated iron structures, put up by Messrs. E. T. Bellhouse and Co. of Manchester. One is 20 yards by 16 yards, occupied by machinery in motion, forming part of an industrial exhibition opened in it in connection with the Lyceum. The other measures 16 yards by 8 yards, and is fitted up as a baronial hall. The area covered by the main building is 30 yards by 20 yards, and for use as a meeting room the space has been largely increased by a deep gallery carried round three sides of the interior. It is lighted at night by the invention known as the "sun-light burner," and first described in the *Builder*, seven or eight years since, as an effective mode of lighting in imitation of sun light, emanating exclusively from the ceiling, but which appears to have been recently appropriated by a Liverpool gentleman as his own invention, although it had even been realised by its true inventor, "J. E. D." in a Scottish theatre some years before it was described by him in the *Builder*. The sun-light burner has since been found to be an excellent ventilator, and it is used in the Oldham Lyceum for this purpose also. The exhibition in the newly-appropriated building comprises numerous objects of industrial and art interest, and was inaugurated on Monday in last week by the Earl of Wilton, the corporate authorities of Oldham, the Bishop of Manchester, and others, who afterwards held a banquet, in the town-hall, of about 200 persons, including a large number of ladies.

ISLINGTON POOR-HOUSE COMPETITION.—It will, no doubt, seem strange to some of your readers when they see by an advertisement in your paper of July 22, that premiums have again been awarded for the Islington poor-house. We were instructed to make out working drawings, &c. and awarded the first premium twelve months ago, but we have now been obliged to put it into our lawyer's hands; so it will be unnecessary for us to make any further observations upon the matter until it shall come before the proper authority. We hope, after the various notices that have appeared in your valuable paper, you will be so kind as to notice this.—JONES & PARKER.

TELEGRAPHIC PROGRESS.—Intelligence has been received that the first portion of the great Mediterranean Submarine Telegraph has been successfully laid down, from Spezzia, in Piedmont, to Cape Corso, in Corsica, as well as the communication across the Straits of Bonifaccio, from Corsica to the island of Sardinia. It is also understood that the contractors, Messrs. Tupper and Carr, are nearly ready with the remainder, to connect Cape Spartivento, the southern point of Sardinia, with the African coast, where it will join the Algerian lines, and whence it is ultimately intended by the projector, Mr. Brett, that new lines be sent eastward through Egypt, with the view of approximating towards the East Indian telegraphic system.——The dividend declared at the last half-yearly meeting of the Electric Telegraph Company, appears to have been at the rate of 7 per cent. free from income-tax. It was stated that, notwithstanding a reduced tariff, the revenue shows an improvement, just as we anticipated while in vain urging the company to reduce their tariff, and so obviate the formation of new lines, which the company *now* express themselves ready enough to compete with *ad libitum*. The operations of the company are now identified with fourteen lines of railway, including the Crystal Palace, and nearly 3,700 miles of new wires are in course of completion. The Act granting the company limited liability now only awaits the royal assent. The reserved fund is stated at 61,033*l*.

REPORT ON METROPOLITAN BRIDGES.—The report of the Select Committee of the Commons on Metropolitan Bridges has been published. The reporters state that, except Blackfriars and Westminster, the whole of the bridges are in a durable condition. They report on the necessity for further means of communication across the river, and state that the sites proposed by Messrs. Tite, Page, McLean, Bennoch, and others, are,—Tower-hill below London-bridge, St. Paul's, Charing-cross, and Horse-ferry-road. They recommend distinct rates to defray the cost of bridge accommodation

St. Mary, in Romney Marsh.—The rector of this parish, the Rev. Henry Macharness, is striving to give his church something like propriety of appearance, by restoring the chancel, clearing away the whitewash from off the stonework, and repairing where needed. It is a very poor parish, however, with a population of not more than 100 souls, so that he gets little help. Some public-spirited Kentishman, or Man of Kent, seeing this notice, may perhaps be led to help him. At Dymchurch, where Mr. Macharness acts as curate, he is doing much good with quiet energy.

Royal Association for Promotion of the Fine Arts in Scotland.—The annual general meeting of this association was held on Saturday before last, in the Queen-street Hall, Edinburgh, which was filled on the occasion by a numerous assemblage of ladies and gentlemen. The prizes to be distributed among the subscribers were displayed behind and in front of the platform. The Dean of Faculty was called to the chair. He was accompanied to the platform by Lord Neaves, Colonel Cadell, Sir William Johnston, Professor Christison, James T. Gibson-Craig, Esq. and numerous other gentlemen of influence at Edinburgh. In course of his address the Dean of Faculty said that he considered such an institution as this to be well entitled to claim for itself the character of national; for although it was sometimes publicly said to be maintained for the benefit and encouragement of art, it had, in truth, a higher duty and a nobler end; and if it diffused benefits and encouraged artists, it was only in so far as they contributed to that end—only in so far as they might be regarded as the servants of the public—the instruments whose skill and excellences of all kinds were faithfully reflected in every successive stage of the improvement of the public taste. That there had been a great advance in the public taste in our day he thought few would be found to deny. He said so not merely because of the production of works of great merit in the arts of architecture, sculpture, and painting among ourselves, but rather because we see it sometimes in those matters of a much more homely kind,—in the internal decoration of our houses, in the arrangement of our gardens, and in the fashion, form, and materials of the most common implements and utensils of domestic life. Now, these he regarded as very precious symptoms indeed, because they indicated the presence of a taste which was no longer the mere frigid admiration of classical models, but which had a vital action and a pervading character. The report was adopted and the prizes were then ballotted for in the usual manner.

The British Contribution to the International Exhibition of 1855 at Paris. The Treasury have sanctioned an estimate of 50,000*l.* as the sum required to be voted in the year ending 31st March, 1855, for expenses to be incurred in the management of the British department of the Universal Exhibition at Paris next year. A correspondence as to the details and mode of procedure has been held between the Department of Science and Art and the Treasury, and a sum of 3,000*l.* already voted to defray preliminary expenses.

Chimney Climbing. At Churchbridge, Cheslyn Hay, on Wednesday week, a climber, named Chimney Tom, went up a stack 60 yards high, for the purpose of affixing a lightning conductor to the chimney. The plan adopted seems to have been much the same as that of Steeple Jack. A large square kite was made to carry a string over the top of the chimney, and by means of it other lines were hauled over it, until one of requisite strength was got over. To one end of this latter was attached a chain 20 feet long, which lay over the mouth of the chimney, and to the end of the chain was fixed a small single block, through which was reeved another line leading to the ground. To one point on this line was secured two 56 lbs. weights, which having been drawn up to the block, the other end was secured to the person, who by a very little exertion was in less than a minute run up to the chimney top, around which he walked with much ease and confidence. The chimney had been struck by lightning some time ago, and is now supplied with one of the improved lightning conductors manufactured by Messrs. Wood man and Lewis, of Manchester, who are said to have applied during the last few months upwards of 100 conductors to high chimney stacks, church spires, &c.

Roads. Tenders for road-making and drainage upon the "Crystal Palace Park Estate," Norwood, the property of the "Englishman Freehold Land Society." Mr. Joseph Springbett, acting surveyor. Mr. R. J. Woodcock, consulting surveyor:—

Hyes	£3,340
Holledge (accepted)	2,250
Campbell	2,134
Cooke	1,912
Wood and Wheeler	1,892
Rogers	1,680
Gregory	1,150!

Destroying Bricks; with Brutal Assaults.—Two police-constables and another man having been set to watch a croft at Garden-lane, Manchester, about midnight they perceived a gang of men destroying the bricks. The officers and watchman immediately ran towards them, on which the men beat them with sticks, kicked them in the most violent manner, and stabbed one of them in the side. Several thousands of bricks were likewise destroyed. On several previous occasions bricks had been destroyed, and a reward of 10*l.* had been offered for the discovery of the perpetrators.

Iron and other Metals.—The puddlers *are* showing a determination to have a small share in the declared rise of price. They demand the modest enough sum of 1*s.* a ton out of the 20*s.* of increase which some have even maintained to be only one-half of the subsequent rise. The South Staffordshire puddlers threaten a strike, and the masters have met and resolved to resist their demand. One of the items of reason given by the masters is, "that considering the price at which manufactured and other iron can be bought in other districts, it is very doubtful how far the present prices of Staffordshire iron can be maintained!" One authority in the trade, while reporting this resolution, expresses the opinion that "it is to be regretted that some of the workpeople are so unwise as to threaten a course which may disturb the present steady position of the trade." Now, we think that if it be so "very doubtful" how far the rise so recently resolved upon can be maintained, it is indeed to be regretted that the masters of these workmen should have set them so pernicious an example, and have been themselves "so unwise" as to disturb the late "steady position of the trade." As it is, the puddlers are likely henceforth to hang as a wholesome dead-weight at the heels of the flying Pegasus which their masters ever and anon appear so prone to mount. It is hard indeed, however, that these will not allow their humble dependants to hang on by the tail. They even threaten to kick them out of all connection should they persist, for "the masters," we are informed, "have adopted measures to prevent the workmen gaining their object by taking the works in detail, so that if the workpeople are so ill-advised (as they have been by their masters' quarterly declaration of a rise in prices) as to persevere in their demands, it is to be feared the result will be a general and simultaneous stoppage of nearly the whole of the ironworks in South Staffordshire,"—a hopeful prospect this the last quarterly meetings have opened up! The working coal and ironstone miners in this same district also threaten a strike for a rise of wages—6*d.* a day! This, too, the coal and ironstone masters have "unanimously determined to oppose." Pig-iron is falling in price. Copper remains firm and in good demand. the prices quoted at Truro, 20th July, were, "Average standard, 136*l.* 11*s.*; average produce, 6⅛; average price per ton, 6*l.* 6*s.*; quantity of ore, 4,327 tons; quantity of fine copper, 287 tons 7 cwt.; amount of money, 27,341*l.* 3*s.* Last sale: average standard, 137*l.* 17*s.*; average produce, 6⅞. Standard of corresponding sale last month, 141*l.* 4*s.*; produce, 6⅜."

Removal of Gasworks from London.—A letter has been sent by Mr. Samuel Clegg, jun C.E. to the Home Secretary, in which he informs his lordship that a committee of gentlemen, with Mr. James Simpson, the president of the Institution of Civil Engineers, as chairman, proposed to form a new company to manufacture gas for the metropolitan gas companies at a distance from London; the gas to be supplied to the companies in their own retorts in a purified state, prepared and ready for the consumers. The sanitary and other advantages of this plan, Mr. Clegg remarks, would seem to entitle it to the support of the Government, more especially as after mature consideration the prefects of the Seine had seen fit in their new contracts with the Parisian gas companies expressly to stipulate that in 1858 all their gasworks are to be removed out of Paris,—a plan identical with that proposed, only in the present instance the companies will be put to no expense whatever in such removal, the new company bearing the cost.

Large Painting on Glass at Munich.—The largest picture, it is said, on glass of modern times has just been finished at Munich. It is to cover a window in the church of St. Catherine, at Hamburg, 45 feet high and 14½ wide. It has been painted by M. Fensser, from designs by Overbeck, representing Our Saviour teaching the Apostles to pray. The work has been executed at the cost of M. Vorbeck, of Hamburg.

New Sewers Commission.—The parochial authorities of Hackney, Whitechapel, and other districts in the borough of Tower Hamlets, have selected Mr. George Offor, the Chairman of the Property, Income, and Assessed Tax Board, for nomination by the borough members as a metropolitan sewers' commissioner.

Alleged Forfeit in Contract.—In a trial which took place lately at Banbury, Mr. John Chesterman, of Abingdon, builder, plaintiff, and Messrs. H. and E. Austen, of Banbury, grocers, defendants, the action was brought to recover 189*l.* balance of a contract for building defendants' premises in High-street, Banbury. The only plea in defence was a set-off, claimed because the plaintiff did not get the work done within the time specified in the contract, whereby 1*l.* a day had been forfeited. Evidence was given which showed that one of the defendants had repeatedly led to delays himself, and that extra works approved by the architect, Mr. Bruton, were also done, and other delays incurred for which plaintiff was not responsible, and the jury returned a verdict for plaintiff to the full amount claimed.

Liverpool Street Improvements.—At the suggestion of the borough engineer, the health committee have adopted a plan for renumbering the houses in many parts of the town, rendered necessary in consequence of alterations in premises and erection of new buildings. The mode suggested is to mark the old numbers black and the new ones red.

Coal in the Metropolis.—The quantity of coals brought into London, by rail and canal, from January 1 to June 30, 1854, was 447,106 tons, being an increase of 40,423 tons on that of same period last year.

Glass Bricks:—Amongst the more recent inventions patented by manufacturers, we hear of one by Mr. Summerfield, of the Glass-works, Birmingham Heath, for what are termed chromatic glass, or glass-faced grooved bricks. By Mr. Summerfield's process, red or other clay can be combined with glass, and this will secure durability, entire resistance to moisture, and give an ornamental appearance to the building. The form of the brick is also, by means of a groove at the side and end, made so as to add greatly to the strength of the erection, the joints by this means being brought close together, and the mortar acts as a dowell from the shape of the groove.

Steam-hammers.—Mr. Thomas Sumner, of Paterson (U.S.), has taken out a patent, under which he varies the direction of the blow, employing for that purpose a hinged or rocking guide frame for the hammer to descend in, with lever to direct the descent, which he does not claim.——Mr. W. Rigby, of Glasgow, has patented some improvements in steam-hammers and pile-driving machinery, by which he claims the use, in those steam-hammers in which the steam is used to raise them only, of a hammer-block, in the form of a ram or plunger, passing through stuffing-boxes, so that on the steam being admitted into the cylinder, its pressure will raise the ram to the required height, and the ram will fall by its own gravity, guided by the cylinder and stuffing-boxes. In those hammers in which the steam is used both to raise and depress the hammer, he claims a method of making the ram work through the bottom only, so that the top of the ram forms a piston for the steam to act upon, both in its ascent and descent.

TENDERS

For alterations to No. 32, Regent-street, for the Royal British Bank. Mr. T. M. Nelson, architect. Quantities supplied.

Gordon	£1,298 0 0

ADVERTISEMENTS.

MIDDLESEX.—METROPOLITAN BUILDINGS ACT, 7th and 8th Vict. cap 84. Notice is hereby given, that the Court will proceed on THURSDAY, the 24th day of AUGUST next, to the ELECTION of SURVEYOR for the District of Hammersmith, in the said county, in the room of Mr. Christopher, deceased, and such election will be subject to the standing orders of court as to districts and district surveyors; and that no person will be admitted a candidate unless duly qualified under the Act and such standing orders; and every candidate must, on or before SATURDAY, the 19th day of AUGUST next, address to me in writing a statement of his name, residence, age, and qualification; and must also personally appear before the Committee for General Purposes appointed by the Court, at TWO o'clock precisely, in the afternoon of MONDAY, the 14th day of AUGUST next, at the Sessions House, Clerkenwell-green, and produce to them satisfactory evidence that he is of the full age of thirty years, and a certificate from the Board of Examiners appointed under the Act of their approval, and also such other testimonials of character and qualification as he may deem expedient or the Committee may require, and if approved by the Committee will then be sanctioned by them to be a candidate for the said district

C. HEATON ELLIS, Clerk of the Peace.

Sessions House, Clerkenwell, July 20, 1854.

TO PARENTS AND GUARDIANS

AN opening now presents itself for an intelligent active Youth in a Window Glass Warehouse as an OUT-DOOR APPRENTICE, where he will have every opportunity of acquiring the business in all its branches. A premium required, and wages given after the first month.—Apply (prepaid) to H. W. No. 8, Riding-house-lane, Regent-street.

ENGINEERING PUPIL.—A Civil Engineer of long standing, and holding a public appointment where works of importance are being carried out, will receive an ARTICLED PUPIL into his family. With a gentee l well-educated youth, the premium required would be moderate.—Address, for particulars, to C. GAMON, Esq., Solicitor, 74, George-street, Manchester.

WANTED, immediately, an ACTIVE, EXPERIENCED, WORKING FOREMAN, fully competent to superintend, assist, direct, and carry out, in the very best and most economical manner (from commencement to completion), the several works required in the erection of dwelling-houses, &c. of first-rate character. A thorough knowledge of the quality, prices, and conversion of materials, the quality and prices of workmanship, and management of workmen, is indispensable. Any active person answering the above description, with good references, may address, free, to S. W. Office of "The Builder."

TO MILLWRIGHTS AND ENGINEERS

WANTED, a RESIDENT FOREMAN, to superintend the management of machinery, in a large manufactory, where water and steam power are used. Address by letter only, with particulars and references, to X. Y. Z. Hastall's Library, 94, Ebury-street, Pimlico, London.

WANTED, in an Architect's Office, a respectable Youth who can write a good hand, and whose services would be given for the advantages he would gain.—Address, M. A. Office of "The Builder."

Good reference can be given. Address by letter, prepaid, with salary, R. J. at Mr. Seagell's, 40, Middlesex-street, Somerstown, London.

TO ARCHITECTS, BUILDERS, AND GENTLEMEN.

THE Advertiser, a CARPENTER and JOINER, who is thoroughly acquainted with the practical part of the building business, is in want of a SITUATION as CLERK of WORKS or GENERAL FOREMAN, or to take the entire management of buildings. The country not objected to. Undeniable reference can be given.—Address to C. H. Office of "The Builder."

THE Advertiser, a respectable young married man from the country, is seeking a SITUATION as GILDER and DECORATOR. He thoroughly understands water gilding, and has a good knowledge of decorating, plain painting, and glass-cutting. No objection to town or country. Salary not so great an object as a permanent situation.—Address A. B. 15, Alfred-road, Westbourne-green, Paddington, London.

TO ARCHITECTS.

THE Advertiser desires a SITUATION as ASSISTANT. Can refer to several well-known gentlemen as to his experience in the preparation of working drawings, specifications, &c. Address C. M. News-rooms, 283, High Holborn.

TO CIVIL ENGINEERS AND OTHERS.

AN Architectural Draughtsman, who has a good knowledge of land surveying and leveling, plotting, planning, mapping, and civil engineering, drawing, being also well versed in mathematics, is desirous of EMPLOYMENT. Reference to last employer. Salary very moderate. Address A.G. Mr. Hookham's Library, 93, Bond-street.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

A GENTLEMAN who has been for several years engaged in the above professions, and has a thorough knowledge of land surveying, levelling, measuring architects' work, &c. is desirous of an ENGAGEMENT.—Address M. N. 3, Middlesex-terrace, Hackney-road, or 32, North-street Leeds.

TO ARCHITECTS.

A NARCHITECTURAL DRAUGHTSMAN well acquainted with Gothic, is desirous of an ENGAGEMENT. References unexceptionable.—Address Y. N. Office of "The Builder."

AN experienced Man, of strictly sober and thorough business habits, is open for an ENGAGEMENT, either as Manager of an Estate, Clerk of Works, or Outdoor Foreman to a large job. The Advertiser, being master of his business, would make himself useful to his employer. Satisfactory references. Direct H. O. 10, Tooley street, Borough.

TO SURVEYORS, BUILDERS, AND OTHERS.

A THOROUGH PRACTICAL ASSISTANT CLERK having had some years' experience in surveying, levelling, drawing, building works, and accounts, and the superintendence of workmen, &c. is open to an ENGAGEMENT in town or country. The best references for capability and integrity can be given.—Address, A. B. Marke's, Bookseller, 36, Frederic-place, Hampstead-road.

TO CIVIL ENGINEERS, BOROUGH SURVEYORS, &c.

A GENTLEMAN accustomed to Works connected with the Water Supply and Sewerage of towns, is desirous of an ENGAGEMENT, either as superintendent or Assistant.—Address, R. T. Post-office, Bayswater.

A PERSON, who has a thoroughly practical knowledge of building, wishes for an ENGAGEMENT for part of his time, in taking out quantities, measuring, estimating, or making out builders' accounts, having had considerable experience.—Address, W. W. Mr. Rowdon's, No. 4, Wilmot-street, Brunswick-square.

TO ARCHITECTS AND SURVEYORS, &c.

AN Assistant (experienced) wishes for a SITUATION in an Office or on Works.—Address to E. F. Mrs. Phillips, 6, Artesian-place, Richmond road, Bayswater.

TO ARCHITECTS, ENGINEERS, ARCHITECTS, AND SURVEYORS.

A GENTLEMAN, having a practice in the country, and who is frequently in town on business, is desirous of ASSISTING a Gentleman in London, who wishes for partial retirement, or to give up his more active professional duties on terms of mutual advantage. The Advertiser has had considerable training in the acquisition of professional knowledge, and is thoroughly accustomed to the business of an auctioneer and surveyor's office. Unexceptional references given. All communications strictly confidential.—Address to S. P. G. Messrs. Street, Brothers, Serle-street, Lincoln's-inn.

TO BUILDERS AND OTHERS.

AN active, middle-aged person, without incumbrance and of sound education, having completed his engagement of superintending the last ten months' buildings of the first class, wishes for a RE-ENGAGEMENT as CLERK of WORKS, Foreman or elsewhere, moral principle, talent, and application to the interests of others are demanded. Weekly salary, two guineas.—Address to M. H. at the Office of "The Builder."

TO ARCHITECTS.

A YOUNG MAN, who has had nine years' experience, and accustomed to prepare finished and working drawings, bills of quantities, measurement and superintendence of works, and is well versed in the routine of an architect's office, is desirous of an ENGAGEMENT as ASSISTANT in Office or Works. Unexceptionable testimonials and references.—Address ALPHA, 18, Half Moon-street, Piccadilly.

TO BUILDERS AND OTHERS

ASSISTANCE given in getting out drawings, specifications, taking out quantities, and estimating for work. Working drawings, drawings for patents, plans of estates, buildings, &c. got out, copied, or traced. Plans draughted on to deeds, leases, &c. The above executed upon such low terms as must insure satisfaction.—H. CORMACK, Patent Agency Office, 24, Upper Rosaman-street, Myddleton-square.

TO ENGINEERS, PATENT AGENTS, AND OTHERS.

A FIRST-RATE Mechanical Draughtsman, Colourist, &c. wishes for a PERMANENT or TEMPORARY ENGAGEMENT, at home or abroad.—Please address R. A. at Mr. Storer's, 97, Newgate-street.

TO ARCHITECTS.

AN Assistant, fully competent to prepare finished, working, and detail drawings and coloured perspectives, and can likewise assist in taking out quantities, is desirous of an ENGAGEMENT.—Address V. X. Office of "The Builder."

TO ARCHITECTS, &c.

AS IMPROVER.—A Young Man, having served three years in a builder's office, is desirous of IMPROVING himself in an Architect's office, where, in consideration of his services, he would have the advantage of perfecting himself in the profession. No objection to bind himself for a period. No salary required at first, and then only nominally.—Address, pre-paid, stating advantages, to ALPHA, Post-office, Rugby, Warwickshire.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has been five years in his present situation, is desirous of an ENGAGEMENT; he has been accustomed to measuring artificers' works, and is also fully qualified to prepare perspective, finished, and working drawings.—Address A. N. 20, Kensington-place, Notting hill.

PARTNERSHIP.—To BUILDERS.—A Young Man of active business habits, and a good tradesman (Carpenter and Joiner), who has worked for years in London, having a small capital at his command, is desirous of joining in an established building business. He is fully competent to take the counting house, can take out quantities, make drawings, measure artificers' work, &c. &c. Satisfactory references given as to abilities, integrity, &c.—Apply to J. G. 6, Great Woodstock-street, Paddington-street, Marylebone.

TO CAPITALISTS.

A BUILDER of twenty-five years' standing, doing a profitable and increasing business, is desirous of meeting with an ACTIVE or SLEEPING PARTNER, with about 2,000*l*., if the former, he will be required to manage the counting-house department.—For further particulars address, post-paid, A. B 46, Nottingham-place, Marylebone.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of statuary, Veined, Sicilian, Dove, and Block and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, at the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 5, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

THE MARBLE WHARF, Thames Bank, Pimlico, adjoining Vauxhall-bridge THOMPSON and HOLMES, Marble, Wood, and Stone Brokers and Contractors, and Builders' Agents. Every description of English, Italian, Belgian, and other Marbles. Temporary Office, 8, Crescent-terrace, Millbank.—General Landing Wharf

TO SCULPTORS, MASONS, AND BUILDERS.

MESSRS. BRINE (BROTHERS), beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SON, of Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary, Vein, and Sicilian, will arrive next month. They already have 300 blocks of Vein and Sicilian to select from, at their extensive depôt, Great Northern Wharf, Camden-road, Kingsgrove, where may also be found marble slab of various descriptions, sawn by their powerful machinery.

H. W. WILKINS, Manager.

ITALIAN and GALWAY MARBLE QUARRIES.

Depôt, Whitewall Wharf, Parliament-street, Westminster.

Now landing, Twenty Blocks of large Statuary, suitable for Sculpture, &c. some opened en chico!

Fifty Blocks of good Vein and Sicilian, &c. &c.

Also, 100 Tons of Galway Black Marble, in blocks and slabs of large dimensions.

Apply to Mr. FRANKLIN, Proprietor of the Quarries.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the Proprietors own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs &c. at the Marble and Stone Sawing-mills, Cambridge heath, Hackney. WM. HUSTLER, Proprietor.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Burdilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique &c. Portland, Hyrehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb &c. &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

CAEN AND AUBIGNY STONE.

GATES and GEORGE (late Luard, Beedham, and Co.) CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, are supplying the above, and Portland, Yorkshire, and other stones, at the current prices, from CAEN WHARF, ROTHERHITHE, LONDON. Goods delivered by land or water conveyance, and by vessel, to any part of the United Kingdom.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, baths, plaster, Paris, Portland, and Roman cement, blue lias, Dorking, and chalk lime, plasterers' hair, Welsh re-plain, pan, and ridge tiles, glazed sewer pipes, chimney-pots, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BRAMLEY FALL! BRAMLEY FALL!!

Mrs. ANN HUSLER informs Engineers, Contractors, and Builders that she is able to supply the above stone to any extent. Will guarantee to supply 500 feet cube per week if required.—Apply for samples, prices, &c. to SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.—Fire Bricks and Clays.

MESSRS. E. and W. STURGE have a good assortment of the PAVING; Sel-faced ditto; Hard-hill and Self-faced Slab; also, Sinks, Bills (tooled and rubbed), Sawn in bed of Coping, &c.; Pipes, Pots, &c.; Slates; all at low prices. Tredue Wharf, City-road.

CAEN and AUBIGNY STONE.—J. P. FOUCARD, Stone Merchant and Quarryman, Caryes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Battersea-bridge. Offices: 246, High street, Southwark, near the Town-hall.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corsham-down, Combe-down, and Farleigh-down Stone of the best quality, and at the lowest price. Painswick and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness.

N.B. Stone and other goods landed and carted.

BATH STONE DEPOT, BOX STATION.

ROBERT STRONG, STONE MERCHANT, Box, Wilts, Box or Ground Stone, Scalloch Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone-work for building purposes, both plain and ornamental, prepared ready for hoisting, and forwarded to any part of the Kingdom. Specimens of every variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

ABERDEEN and PETERHEAD POLISHED GRANITE. — Chimney-pieces, Monuments, Columns, Tablets, Tombs, Monumental Gothic, &c. executed on the shortest notice, and at the lowest possible prices, by JAMES WRIGHT, Manufacturer, 112, John-street, Aberdeen; or JAMES and F. MANTELLE, Granite Merchants, 12, Trinity-square, Tower hill, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall. London Agents—TREGELLAS and TAYLOR 3, Pinners-court, Old Broad street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS.)

Great Western Railway Station	PADDINGTON
Great Western Railway Station	BRISTOL
Hopestreet, Mount-pleasant	LIVERPOOL

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

RAWDON-HILL and NEW-PARK SPRING STONE.

BRAMLEY FALL AND POTTERNEWTON STONE.

HAREWOOD GRINDSTONES.

SAMUEL TRICKETT, STONE MERCHANT

Prices and samples furnished. Delivered to any part.

Address—VICTORIA STONE WHARF, ISLE OF DOGS

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico. Patronised by Her Majesty, Prince Albert, the nobility, architect of eminence, and rewarded with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition

THE TREVALGA SLATE COMPANY invite particular attention to their SLATE in SLABS, which will be found on inspection to be vastly superior in strength to any other, and admirably adapted for shelves, Cisterns and Stone-troughs. Also for Bath, Urinal, &c. and every description of Slab work, Circles, Sinks, Slate Tanks with plate-glass sides, for Bath, Chemists, &c. and every description of Slab work wrought and fixed on the shortest notice; 1½ inch Slate Paving, in rubs, planed on one side, and squared, fitted to lay, warranted stronger than 3 inch York, 2s. per foot super. Baltic Wharf, Commercial road, Lambeth.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Pauper Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained

Patronised by Her Majesty, Prince Albert, the Nobility, Architects of eminence, and rewarded with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply them elves from the Manufactory 39 and 40, Upper Belgrave place, Pimlico.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying, fixing, and erecting in any part of the kingdom, from their quarries, Portland stone for all kinds of Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary. London, 8, John-street, Adelphi.

TO ARCHITECTS AND OTHERS.

SAMUEL TWILTON, GENERAL MEMORIAL BRASS ENGRAVER,

183, LIVERY STREET, BIRMINGHAM.

S. T. has had every desirable practice in memorial brass engraving for upwards of fourteen years, principally on designs by the late A. W. Pugin

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLORIST OFFERS his SERVICES in the preparation of respective views, the tinting of backgrounds, and the introduction of landscape, also in general drawing and lithography. Terms very moderate.—Specimens of ability can be seen by addressing A. Z. 29, Denbigh-place, Belgravia

MESSRS. GALLI and COTTI, Ornamental Designers and Decorative Painters, have the honour to acquaint the nobility, gentry, and architects that they undertake decoration of all kinds of buildings, both inside and outside. Having had great practice in executing ornamental painting in the various materials of oil, fresco, distemper, encaustic, &c. they are enabled to produce their work with despatch and economy. Messrs. G. and C. who obtained a medal at the Great Exhibition of 1851, have much pleasure in referring to work executed by them in London and the provinces. Studio at 44, Frith-street, Soho-square. Houses from Ten till Four.

QUANTITIES, Measurements, Dilapidation Surveys, Building Accounts, Land Surveys, &c. Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and careful attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane and Acton-hill.

TO BUILDERS WANTING MONEY.

A GENTLEMAN, who has just come into possession of a large sum of money, is desirous of investing it in the PURCHASE of HOUSE PROPERTY, or would make advances by way of mortgage to respectable builders.—Address, E. T. 99, Hatton-garden.

TO TIMBER-MERCHANTS, BUILDERS, PLASTERERS, &c.

MR. JOHN RICE, 79, Tithebarn-street, Liverpool, has GOOD SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general. Price and terms on application.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the large Stock of Ladders, (extensators), bricklayers', and other Barrows, Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Forest-street, City-road, Calculator, by appointment, to her Majesty's Honourable Board of Ordnance.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' closet traps, plug dishes, brass-work, &c. &c. sheet-lead, and patent pipe, plate, patent spice, sheet and crown glass, white lead, oils, colours, &c. 30s. PER CWT. GIVEN FOR OLD LEAD; GLASS ILLUMINATORS FOR FLOORS, AREA VAULTS, &c.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO CARPENTERS AND BRICKLAYERS.

TO BE DISPOSED OF, under peculiar circumstances, the GOODWILL of a BUILDER'S BUSINESS, with a Commission Yard, doing a good trade, and capable of great extension. Rent moderate. For further particulars, apply to Mr. LEREW, Auctioneer, Cardington-street, Hampstead-road.

TO UPHOLSTERERS, CABINET-MAKERS, AND HOUSE-AGENTS

TO BE SOLD, the LEASE and GOODWILL of a FIRST-CLASS BUSINESS, situated in one of the principal suburban thoroughfares which has been successfully carried on for the last fifty years. The premises are well arranged, comprising spacious and light workshops, stable, coach house, and extensive back area, together with convenient dwelling-house, all adjoining, offering a fine opportunity to a person of moderate capital.—For particulars and cards to view, apply to Mr. GEORGE REREY, Estate and House Agent, 8, Motcombe-street, Belgrave-square.

TO BUILDERS

TO BE SOLD, cheap, the GOODWILL and LEASE of a large old established BUSINESS, close to St. Paul's; more than all the rent let off on lease.—Inquire of Mr. PATCHING, 35, Cranbourne-street, Leicester square.

TO MUSIC SMITHS AND SMITHS IN GENERAL.

TO BE SOLD, with immediate possession, a thriving BUSINESS at the West-End, with lease of house and furniture, if required. A steady person with a small capital would find it a good opening.—Apply, G. D. 2, Carburton-street, Portland-road.

TO CARPENTERS AND OTHERS.

FIRST-RATE JOBBING BUSINESS, with good ready-money connexion, in a popular neighbourhood within five minutes' walk of London-bridge, FOR SALE. The present proprietor is about leaving town in consequence of family's ill-health. This is a *bona fide* business, and a person with a small capital could command it.—For further particulars, &c. apply at 110, Dover-road, Borough.

TO CONTRACTORS, CARMEN, BUILDERS, AND OTHERS.

A SPACIOUS COVERED WHARF, on the Regent's Canal, well adapted for landing bricks, timber, &c. A very low charge will be made, and the wharf is well situated for all parts of the West end, Camden-town, &c.—Apply to WOOD and ROBARTS, Stone and Lime Merchants, Market Wharf, Regent's-park-basin

LANDING WHARF and DRAWING DOCK, LETT'S WHARF, near Waterloo-bridge, Surrey side.—Every accommodation is offered at this extensive wharf for landing, shipping, drawing, and watching goods. English and foreign timber, iron, stone, bricks, sand, coals, &c. &c. 15 feet river frontage for floats; timber, large sawpits, a thirty-ton crane for heavy goods, hoists, &c.; also a ten-ton crane.—Apply to ROUTLEDGE and SON, on the Wharf.

TO INDIA-RUBBER MANUFACTURERS, WATER-PROOFERS, AND OTHERS

A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet, TO BE SOLD, with the consent of a thereto belonging in consequence of the premises not being from that portion of the business, five stories high, with steam engine and shafting forge, and all the machinery requisite for preparing, masticating, and cutting india-rubber in sheets, &c. the whole now in full working order. Term, forty-two years; ground-rent, 28l. per annum.—Apply for further particulars at Mr. LAHEE's (only) Offices, 65, New Bond-street, London.

TO BUILDERS AND OTHERS.

MESSRS. PRICKETT and SON are instructed to SELL, by PRIVATE CONTRACT, in one lot, FOUR PAIRS of SEMI-DETACHED CARCASSES, situate near to Notting-hill.—Apply at their Office, No. 34, Southampton buildings, Chancery-lane.

TWELVE PLOTS of FREEHOLD BUILDING LAND TO BE SOLD, four plots eligible for shops, situate at Sydenham, near the Crystal Palace. Roads and sewers made. Or the proprietor would have no objection to exchange the same for weekly houses in London in a diapidated condition.—Address, X. care of Mr. Pewtress, 67, Newington-causeway

TO BE SOLD, for 500*l.* FIVE 4-Roomed COTTAGES in a neighbourhood where such property is much in demand. All well let, and producing 65*l.* per annum; ground-rent, 10*l.*; term, ninety six years.—Apply to Messrs. HARE and WHITFIELD, Solicitors, 1, Mitre-court, Temple.

TO PLUMBERS, PAINTERS, GLAZIERS, &c.

TO BE SOLD, the Lease of the Premises, and goodwill of an old established BUSINESS at the West End, doing a good trade. A capital opportunity for a young man commencing business in the above line. Full particulars at Mr. H. FOSTER'S Auction rooms, 410, Oxford-street, near Soho-square

TO BUILDERS, PUBLICANS, AND OTHERS

A DESIRABLE PLOT of FREEHOLD LAND, three miles west of the Marble Arch. TO BE SOLD, or LET on LEASE, at a low ground-rent, on a large estate requiring a public-house, which is already built in carcase, and land for six or seven houses adjoining. Money can be advanced to a responsible party.—Further particulars on the Premises, of Mr. LLOYD, Surveyor, Avenue-road, Shepherd's-bush

TO BUILDERS.

TO BE SOLD, by order of the Mortgagee, at the amount of the mortgage, THREE COTTAGES, nearly finished, subject to 9 ground-rent each, for 99 years, well worthy of notice as a good investment. Purchase, 600*l.* The freehold of the land could be had, if desired, at twenty-five years' purchase. Apply on the Premises, Avenue-road, Shepherd's-bush, three miles west of the Marble Arch. The Starch green omnibuses pass every quarter of an hour.

LANDWADE HALL, near NEWMARKET, CAMBRIDGESHIRE.—TO BE SOLD, the MATERIALS of the above mansion, erected in 1791 from designs of Mr. Buckler, F.S.A. The materials consist of handsome bay and oval windows in stone, carved battlements, finials, noble stone doorcases, stone chimney-pieces, ornamental chimney-shafts, carved oak screens and doors, 200,000 bricks, 200 cubic feet of stone, 4,000 feet of timber, and the usual internal fittings belonging to a gentleman's mansion, on which upwards of 10,000*l.* have been expended within the last six years. Tenders for the above to be delivered to Messrs. ISAACSON and PATTERSALL, auctioneers and Estate Agents, Newmarket, on or before the 15th day of AUGUST next, when satisfactory tenders received, the whole materials will be sold by auction in the month of September, after which notice will be given in the Cambridge papers.

WEST HAM BURIAL BOARD.—From TWELVE to TWENTY FIVE ACRES of LAND are wanted in the parish of West Ham, Essex, or in the adjacent districts, for a Burial Ground.—Sealed Tenders, describing the nature of the soil, the price, and the time when the land can be given up to the Board, to be sent on or before THURSDAY, the 10th AUGUST, by TWELVE o'clock, addressed to Mr. JOHN SUTTON, Clerk to the Board, Plaistow, Essex.

25th July, 1854.

THE BUILDER.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or also being likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ... }

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse dauby appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That it is impossible to be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON —PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands unequalled, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 1s. 8d. and 1 2s. each, carriage inclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 1ls 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superseding, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 8s. Permanent Brilliant Black, for all kinds of outside work, 12s. per gallon; and 2s. per gallon extra.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4d. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in all colours. Price 10s. per gallon, which will cover and finish about 1 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innoxious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under Hand, of unrivalled colour and texture, direct from the works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price-list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known and stucco dry quickly, and can be painted upon within a few hours. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT. 6, South Wharf, Paddington.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above-superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for all work where all the above qualities are required. It is manufactured on the only principle that Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by CHARLES RICHARDSON, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works adjacent to the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Duntall Wharf, on the River Parrett.

These Cements are, they confidently believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying scientitious power, and a consequent regularity, the want of which so obnoxious in Cements chemically manufactured.

FULLWOOD THOMPSON and CO. will be happy to forward terms by post on application, and can offer favourable terms to large purchasers and exporters.

Mt. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and Co. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (protected by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne, at Messrs. Robins's Wharfs, Rotherhithe-street, Bricklayers' Arms, Kingsland, Regent's Canal, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public that they have completed the enlargement of their works, in order to meet the increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. JOHN BAZLEY FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster: and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Hedging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The blue lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SLOANE'S BATH RED STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GROUND ABERTHAW LIME (for Hydraulic Works). Blue Lias Cement, Cambrian Plaster, Coast Coal of Lime for Agricultural and Gardening purposes; and Portland Cement, supplied in casks or barrels, to all parts of the kingdom, or forwarded by railway direct out of the works, in casks or bags, to any part of the kingdom.—JAMES BIRD and CO. Cambrian Cement Works, Cardiff.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

ENCAUSTIC TILE PAVEMENTS. MAW and CO. BENTHALL WORKS, BROSELEY, Salop, manufacturers of the Cloister Pavement of Mediæval Court, and

THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM,

in the beautiful ENCAUSTIC TILE PAVEMENT of CLOISTERS of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, Esq. in Official "Hand-Book"), forwarded without charge, designs and estimates adapted to any given dimensions of Entrance-halls, Conservatories, Verandahs, &c. in every style.

Specimens at 11, Aldersgate-street, London.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, Mill-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

A rich red-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO BUILDERS, CONTRACTORS, AND OTHERS.

MR. BENJAMIN GOUGH, in returning thanks for the liberal patronage with which he has been favoured during more than twenty-one years in the brick and stone trade, beg to announce that he has disposed of his interest to Messrs. MILLS and PRICE, and strongly recommends those gentlemen as his successors, to the continued support of the building trade in general.—37, Newington crescent, Newington butts, August 1, 1854.

WHITE SUFFOLK and RED FACING BRICKS,

COWLEY, KENT, and ESSEX BRICKS

Also Yellow and Pale Malm, Seconds, Cutters, Paviors, Stippers, &c.

KENTISH RAG STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington butts.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour.—Address, Mr. WM. WEBB, Brick-fields, Stoke Newington.

TO BUILDERS AND OTHERS.

MUST be cleared, 100,000 good old BRICKS, cleaned and loaded, at 16s per 1000. Inquire on the Premises, now being pulled down, of DAVIS, Old Bailey, Wood street, Cheapside. Also at corner of Chancery lane at 12s.—Inquire on the Premises, or of J. W. BROOKER, Dealer in Building Materials, New Kent-road.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices copings, labels, &c. at about one third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and Co. 2, Porti ad-street, Southampton. Illustrated list of prices or samples forwarded on application.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 33s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Oast-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate. Chief Office, 27, Regent-street.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self acting, and not liable to get out of order. References to parties satisfied, duly supplied with quantities up to 3,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price and lerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Papermakers, Brewers, Manufacturers, and all others who may have water, water liquids in store, or to raise well, find it their interest to use these Pumps for ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, with chimney horse and complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power nominal, adapted for all purposes where permanency is not required. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 91, Blackfriars-road. These engines have been successfully employed for years.

JAMES MICHIE, Engineer, Battersea-park, Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Crabs, &c.

Now Ready, Several High-Pressure Engines for Sale.

TO ENGINEERS, &c.

WANTED, immediately, a Six-horse High-pressure Portable STEAM-ENGINE, with boiler and pumps complete, fitted up with wheels so constructed as to be thrown at pleasure off its beamings, and adapted to a fixed position for lifting water from a well 40 feet deep, and also for raising the same into a reservoir 25 feet from the surface. The pumps to consist of 3—7 or 8 inch clear diameter barrels, the spout on to be copper, 6 inches clear diameter, with flange joints and with rose end. The rising main 5 inches clear diameter of copper, with joints as before. An engine adapted for the above purposes combined with arrangements for boosting materials is preferred. The pumps can be furnished either with or without suction and rising main.—Address to Messrs. ALLSOPP and SONS, Burton-on-Trent.

STEAM POWER TO BE LET.—Apply at the Premises, No. 7, Johnson's-place, Holland-street, Southwark.

STEAM BOILERS of every description, Wrought-iron Girder Bridges, Gasholders, and General Castings, Cranes, Tanks, and Coverings for Iron Work, manufactured by MILLER & HUSSEY, Phœnix Works, Tividale, near Dudley.—London Office, 73, Hatton-garden.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hueser, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 1, 1853. In answer to your inquiries respecting the suitableness of the Gutta Percha tubing for pump suctions, I find that the water has not affected it in the least although it will cast lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours &c. C. Hueser." N.B. The Company's Illustrated Circular, containing instructions to plumbers for joining tubes, hunting tools, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

GOODYEAR'S VULCANIZED RUBBER. Steam packing from one-sixteenth to one inch, in sheets, or cut to shape, for manhole plates, piston-rods, steam joints, steam-cheeks, rubber-heads &c., steam engine and brewers' hose, gas tubing, machine belting from 2 to 11 inches width, railway belting from 4 to 16 inches width, washers, discs, valves and buffers; steam-gauge pipe, India-rubber cloth, bands, bolls, and toys; cushions and beds, by the case in bond or in stock. Crockett's Leather Cloth.—POLHILL, BREWSTER, and CO. American Importers, 22, Coleman-street, City, London.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

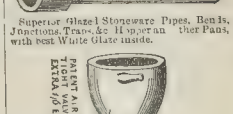
WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the Leviathan of London. Particulars forwarded on application.

HAYES, BROUGH, and CO.

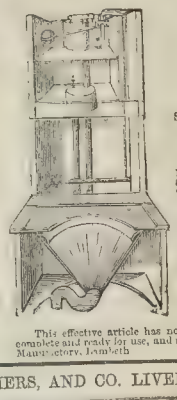


Works: Llwyncoo, near Wrexham.
Offices: 11, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES, FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Huperan ther Pans, with best White Glaze inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective S-yphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

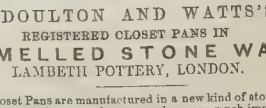
This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGARD, Engineer.



Royal Arsenal, Woolwich, June 24, 1852.

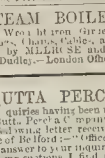
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

STONE WARE PIPES, BENDS, JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY TOPS, &c. FIRE-CLAY FLUE PIPE



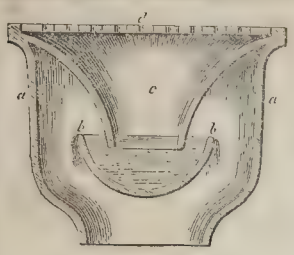
May also be had as follows:—

LIVERPOOL—STORES, 70, SOHO STREET, LIVERPOOL.

GLASGOW ..... J. A. Mathieson, Hope-street.	BLACKBURN .... W. Hopwood, Clayton-street.
DUBLIN ..... Robt. Lovely, Poolbeg street.	CARLISLE ..... C. Armstrong, Lowther-street
CORK ..... W. N. Brash, Dean-street.	WHITEHAVEN ... Hugh Todhunter.
WATERFORD ..... J. Sparrow and Co.	COCKERMOUTH ... John Bird.
CARNARVON ..... Jno. Jackson.	GUERNSEY ..... Guerin, Brothers.
PRESTON ..... J. Armstead, Hudson-street.	LONDONDERRY ... W. and A. M'Elwee.
KENDAL ..... Robt. Thompson.	WIGAN ..... James Fairclough, King-street.

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.
Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.



These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

JENNINGS'S PATENT TRAPS.

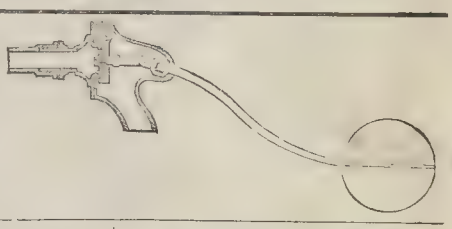
THESE TRAPS are applicable to the SMALLEST SINK, or most PUBLIC ROADWAY, as also for STABLES, AREAS, &c. They are in use at the Brewery Stables of Messrs. Elliott and Watney, Messrs. Hodges and Co. the Distillers; Messrs. Truman, Hanbury, and Co.; Bank of England, Discasing Rooms of the London Hospital, Institute of Engineers, &c. References to several Towns can be given where they have for Twelve months acted most satisfactorily.

JENNINGS'S IMPERISHABLE CLOSETS, URINALS, AND LAVATORIES.

VISITORS to the CRYSTAL PALACE are invited to inspect GEORGE JENNINGS'S Sanitary Arrangements.

JENNINGS'S PATENT DRAIN PIPES.

ARRANGEMENTS are now making to establish Depôts in different parts of London, and in every Town in the United Kingdom. As no extra charge will be made for these Pipes, all are that now charged by respectable manufacturers FOR THE OLD-FASHIONED SOCKET PIPES, the Patentee solicits the patronage of Engineers, Architects, and Builders.



JENNINGS'S PATENT SHOP-SHUTTER SHOES

Shoe, and secure, Shop Shutters at HALF THE COST of the troublesome and destructive shutter-bar.

A Book containing illustrations, descriptions, and prices of Jennings's various Sanitary Inventions can be had on application, or by post, if two stamps are inclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
No. 29, Great Charlotte-street, Blackfriars-road, London.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and cumbrous fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of the thing against the column of water when most required, and are warranted to stand any known pressure of water.

	½	¾	1	1½	2
Complete with Balls: Plain shank	5s.	6s.	6s. 6d.	7s. 3d.	1 Inch. 12s 6d each.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 3d.	1¼s 6d each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

J. TYLOR AND SONS, WARWICK-LANE, NEWGATE-STREET, LONDON.

SALISBURY	Messrs. Osmond and Son.	CARDIFF	Messrs. James and Price.

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings with prices, &c., will be forwarded free on application as above.

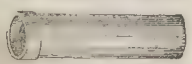
WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,

MANUFACTURER OF



GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY,

COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

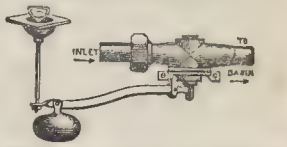
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Brook-head, Bermondsey, Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Bridge-street, Covent Garden; and at EDWARD COCKS, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.



MANUFACTURERS of GLAZED

STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 10 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

J. TURNER, Pottery, 2, South Wharf,

Praed-street, Paddington.

SALES BY AUCTION.

TO COACH-SMITHS, IRONFOUNDERS, BUILDERS, and OTHERS.—Valuable Leasehold Premises, George street, Oxford-street By

MESSRS. FULLER and HORSEY, on WEDNESDAY, AUGUST 23, at ELEVEN, on the Premises unless an acceptable offer is previously made by private contract, by order of Mr. Henry Thrupp, who is retiring from business, the valuable MANUFACTURING PREMISES, for many years occupied by the eminent firm of Messrs. H. E. Thrupp and Sons, erected under their superintendence and arranged and built expressly for carrying on the business of a coach smith and ironfounder in all the branches and on a large scale. The premises are spacious and most substantially erected, and comprise a lofty gas lighted and well ventilated, occupied as smiths' shop and floor 110 feet in length, compact and convenient brass and iron foundry, machine by or turnery of four floors, with travelling crane, basement, finishing and trimming shops, store-rooms, and on the basement, finishing and trimming shops, store-rooms, and six dwelling-houses, Nos. 5 to 10, in George-street, five of which are let or fitted or to be immediately, and premium, of which are let or fitted or to be immediately, and premium, of which are occupied as offices, and the clerk's residence. The whole is held for an unexpired term of seventeen years, at a moderate rent.—To be viewed till the sale by card only. Particulars will shortly be ready, and may be obtained on the Premises; of Messrs. Bergeonneau, Clark, and Milnes, Solicitors, 150, Oxford-street; and with cards to view, of Messrs. Fuller and Horsey, Billiter-street, City.

TO COACH-SMITHS, IRONFOUNDERS, COACHBUILDERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on WEDNESDAY, AUGUST 23, and following days, at ELEVEN each day, on the Premises, George-street, Oxford-street, by order of Mr. Thrupp, who is retiring from business and will not be connected with the valuable PLANT, MACHINERY, TOOLS, and STOCK in TRADE, together with the right to use the name and business interest "Collings's Patents," as successors to the late John Collings, the patentee. The plant includes a six-horse power high-pressure steam engine, on the Cornish boiler, six-horse power high-pressure steam engine, on the Cornish boiler, self-acting screw cutting lathe, several engine and foot turning lathes, screwing and drilling much nes, punching machines, drilling presses, slotting, riggers, and drilling gear and machine, machine, rumbler, two cupolas, crane, driving gear, and exceptionally large furnace, eight smiths' forges, 3 tons smiths' tools, anvils, vices and benches 20 tons rod and bar iron, 5 tons pig iron, 10 tons finished, loom rings and plates, air furnaces, brass stands 8 tons assorted iron, 2 tons of patterns, and numerous other effects.—To be able to form an opinion of the quality and value of the effects viewed on Monday and Tuesday previous to the sale, when catalogues may be had on the Premises; and of Messrs. Fuller and Horsey, Billiter-street City.

TO ENGINEERS, IRON STEAMSHIP BUILDERS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by Messrs. Samuda, Brothers (who are discontinuing their works at their iron ship-building establishment at Poplar), to DISPOSE OF, by Private Contract, the very complete ENGINEERING WORKS, at Orchard-place, Blackwall, and immediately contiguous to the East and West India Docks, and the extensive establishment of Messrs. Mare and Co. a most desirable freehold property for the purposes named, near the junction of the Thames, were planned by the present firm, and are fitted with the whole of the valuable plant and ready to carry on complete, and in all respects suitable and ready to carry on the manufacture of marine engines and general engineering and iron work without any additional outlay. The position and arrangements of the premises allow the erection of steam machinery in any size not required on the wharf, without the necessity of taking down any of the walls, effected by reason of the absence of room from the river, and for additional security for vessels lying alongside a deep stream, of which have been placed in front of the river Wall and Wharf, a double tier of piles, and the transit of goods, only passing on a quay, or private, effected from the great docks. The building are well adapted for the present owners by Messrs. Cubitt and Co. but a few years since, and are arranged as combination light and lofty workshops. The machinery and tools are by the best makers, and will add much to the improvements. There are suitable foreman's and watchman's houses attached to the works. Part of the premises may be rented by a tenant on lease, or by the year by the Landlords, and will be let on lease at a rack rental subject to the machinery only being paid for at a valuation. Further particulars may be had of Messrs. Fuller and Horsey, Billiter-street, London.

IN BANKRUPTCY.—To Timber Merchants, Contractors, Builders, Plumbers, Ironmongers, Firewood Dealers, and others

MR. CONTRACT No 2.—BUILDING REQUISITE HOUSES, Coke Parlour, Meter, and Governor Houses, Cottage Workshops, Offices, and Boundary Wall, Retaining and Foundation Walls, Gas-holder Tank, Retort & Dry Well, Water Wells &c.

CONTRACT No. 3.—Retorts, Connections, Purifiers, Condenser, Exhauster, Governor, Siphons, Valves, Hydraulic Main, about 80 Yards of Cast-iron Main, 70 Yards of 7-inch cast-iron Pipes, &c.

Plans and specifications of the several works may be seen on application at the Office of the Commissioners in Great Malvern, between the hours of 11 and Two o'clock.

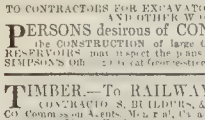
Sealed Tenders, addressed "Tender for Gas-works, Contract No ——," are to be delivered at the Commissioners' Office on or before the 31st day of AUGUST, 1854.

The commissioners do not pledge themselves to accept the lowest or any Tender. By order of the Board,

JOHN SECKA, Clerk to the Commissioners.

Great Malvern, 7th August, 1854.

TO CONTRACTORS FOR EXCAVATORS, BRICKLAYERS, AND OTHER WORKS.



PERSONS desirous of CONTRACTING for the CONSTRUCTION of large COVERED and OPEN RESERVOIRS may inspect the plans and specifications at Mr SIMPSON'S Office, 20, Great George-street, Westminster.

TIMBER.—To RAILWAY COMPANIES, CONTRACTORS, BUILDERS, &c.—MACKINNON and CO Commission Agents, Montreal, Canada, and Agents in North America for Messrs Rathbone Brothers, Manchester, &c. &c are prepared to make offers for any quantity of Canada first class, assorted Red and White Pine Timber, Boards, & Deals, either in Rafts or specified Lots, or cut to any scantling such as suitable for railway Station Buildings, Bridges, &c. &c. Timber may be manufactured, flooring or roofing purposes, sheet piling, &c. &c. thereby saving much waste, freight, and all inside cost of cutting up in England. MACKINNON and CO are also prepared to state prices (in sterling money) of staves, delivered free on board, at Montreal or Quebec.

Montreal, 17th July 1854.

Reference.—Messrs W Fairbairn and Sons, Manchester; Messrs Laurie, Clark, and Co Liverpool.

LATCHES, HANDLES, LOCKS, BOLTS, HINGES, &c. Specimens at No. 33, Hardware Department, Crystal Palace.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, mathematical, agricultural implement makers, shipbuilders, and also by the British and French Governments for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing and turning.

Their operations are in every respect perfect, either in hard or soft wood and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by WILLIAM FURNESS, Patentee, No. 2, Lambert-street, Liverpool, from whom full particulars may be obtained.

POWER MORTISING MACHINE.

THOMAS EDINGTON, late of the Phœnix Iron Works, Glasgow, Iron Merchant, Contractor, Inspector of Railway Plant and Castings, Agent for Patents, General Commission Agent. WANTED AGENCIES for the Sale on Commission of Scotch Pig Iron and Ship Plates, Angle and Bar Iron, Tinned Plates, &c.—1, GORDON-STREET, GLASGOW.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 2, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and surveyors to their complete system of warming horticultural buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A Calorifere for warming by hot air only, 45 horses Fahrenheit, in burning 15 lbs of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, thus making it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifère has been adopted by his Grace the Duke of Bedford at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 65, King William-street, City.

THE DEFIANCE LOCK.—200 Guineas Reward.—Messrs. PARNELL and PUCKRIDGE are still willing to hand over the above sum to whoever may succeed in picking this lock. Any person desiring to make the experiment on application at the Depot, 73, Strand, London, will receive immediate attention, and be made acquainted with the requisite particulars.

These Locks are recommended to the public for their simplicity, durability and perfect security.

Also, Parnell's Patent Noiseless Box staple and Striking Plate. Fire-proof Safes, Deed and Cash-boxes, Copying and Letter Presses. Descriptions and lists of prices may be had at the Depot, 73, Strand, gratis.

Street-door Latches, with small neat keys, warranted safe from picklocks, 15s. each, with two keys.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions: China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 50 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

TO ARCHITECTS AND BUILDERS.

CHUBB'S WROUGHT-IRON and FIRE PROOF DOORS and FRAMES, for strong Rooms, a large stock of the above of all sizes, made in the best manner, and of different strengths, fitted with CHUBBS' PATENT DETECTOR LOCKS, throwing from two to twenty bolts, constantly on sale, at very moderate prices. FIRE-PROOF SAFES of every size and Patent Detector Locks and Latches for all purposes.—C. CHUBB and SON, sole Manufacturers, 57, St. Paul's Churchyard, London.

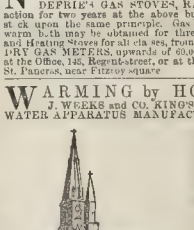
WIRE STRAND FENCING as furnished with all its fittings, by R. S. NEWALL and CO, having elicited the unqualified approval of practical men, confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosure (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. (after the model of the fences of this material in the Slopes and Home-park, at Windsor), has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
130, Strand, London.
67, Hyde-park-street, Glasgow.
37, Dale-street, Manchester.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.



JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Trenails, Bars, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Roofing and Paloising Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction and easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where they may be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and Co. (opening to the Monument), London-bridge. Established A.D. 1700.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEFRIES'S celebrated DRY GAS METERS, upwards of 60,000 in use.—See testimonials at the Office, 148, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the extensive establishment in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge, delivered at a meeting of the Architectural Society, wherein Mr. Bigge observed that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs JOHN WEEKS and Co will guarantee their Hot Water Apparatus for thirty years at 5 per cent

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air-bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest Stock in London of the above and other Ironwork of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot water pipes, with all the usual connections; hoop-posts and rods, stable fittings, pump troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

CASTING LEAD TO LEAD WITHOUT SOLDER.

Lead-lined Chambers, or any lead-lined vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

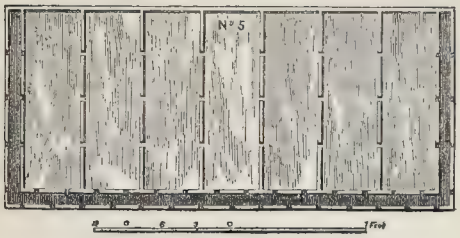
TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at



No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

HAYWARD'S IMPROVED

COAL-HOLE PLATES.

ILLUMINATING GRATINGS.

PAVEMENT LIGHTS.

COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each

N.B. The Flange A prevents them from shifting when trodden on or being forced up.

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c. Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS. DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc, it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those Atmospheric influences to which it is liable, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc is not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, in consequent much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs about	18 oz.	per foot super.	
No. 12	"	"	20 oz.	do. do.
No. 13	"	"	23 oz.	do. do.
No. 14	"	"	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

TO CONTRACTORS AND BUILDERS.

BENNETT'S LOCOMOTIVE and SELF-ADJUSTING CENTERING for SEWERS and CULVERTS, is recommended as an immense saving of labour, materials, and loss of time incidental to striking, moving, and resetting the striking has been so arranged as to insure an equal pressure on all parts thereby dispensing with the risk of crippling or throwing the arch—five minutes only being required for striking moving, and resetting a length of 9 feet, which length is sufficient for any quantity of sewer. Further particulars can be obtained of JOSEPH JEFFREY BENNETT, Dover, Kent; or of Mr JAS HOLDSWORTH, 11, Shaftesbury-crescent, Vauxhall-bridge-road, Pimlico.—Licences granted.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for on metal sash, rails, gates, shutters, and other gates and doors of large and small dimensions made of an unusually light weight and with these hinges as easily as a wicket. Ornamental Hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and a great variety of other Hinges at moderate prices. Notice genuine names marked "Charles Collinge, patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

IRON ROOFS, BRIDGES, HOUSES, and CAST-IRON WORK, of every description, supplied and manufactured by

JOHN WALKER, Mill-wall, Poplar.

Offices, Arthur-street West, London-bridge, late 63, Gracechurch-street.

N.B. Builders and others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

THE PATENT GALVANIZED IRON.

TUPPER and CARR,

Owners of Crawford's Patents, and Successors to THE GALVANIZED IRON COMPANY,

Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.

An allowance to the Trade.

BUILDERS, CARPENTERS, AND OTHERS REQUIRING CASTINGS IN IRON, WILL FIND EVERY ATTENTION GIVEN TO THEIR ORDERS AS TO QUALITY AND PUNCTUALITY.

Estimates given on application for Iron-work of every description. Carefu1 and experienced Foremen sent to measure and receive orders.

NEW PATENT MACHINE for MORTISING AND TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older dangerous introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

WHAT MASTER WOULD GIVE HIS MEN TEN PAIR OF TONGS TO CARRY WHEN ONE CAN DO THE WORK?

BY ROYAL LETTERS PATENT.—The ONE GUINEA TONGS.—To GASFITTERS, MILLOWNERS, RAILWAY and WATER COMPANIES, ENGINEERS, &c. WORMALD and POLLARD'S Self-adjusting Pipe and Nut Wrenches, are the most useful tools in the mechanical world. The pipe-wrench is an instant takes from 2 to 2 inch pipe, or ten different sizes. The nut-wrench takes any size to 5 inch. Can be placed to the greatest nicety.

Companies now using the Patent Wrenches:—Woolwich Arsenal; South-Eastern, Brighton, and other Lines; Crawford Gasworks; Price's Patent Candle Company; Easton and Amos; and others, too numerous to mention, which may be known at the Wholesale and Retail Depôt, Mr. JEWELL'S, 136, Southwark-bridge-road; Manufactory, Lond-street, Vauxhall.

ARTESIAN WELLS.—Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEE, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well pipes, for exportation. Men and tools supplied to bore for various minerals, &c

---

CHEAP PEWTERING, GAS-FITTING, and BELL-HANGING.—Improved Moulded Counterweights, 63s. per pull; Private Residences fitted with Gas, Four Lights complete, 60s.; Bells hung in Secret, with best Porcelain Levers, 5s. per pull. BARRATT, Pewterer, Bell-hanging Manufacturer, and Gas-Fitter, 12, Spa-road, Bermondsey.

JAMES MICHIE, Engineer, Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Pumps, Sawing Machines, Cranes, Crabs, &c.

N.B. Several High Pressure Engines for Sale.

SOUTH-EASTERN RAILWAY.—For SALE, at Strood, near Rochester, Kent, a very superior PUMPING-ENGINE, by Boulton and Watt, of 40-horse power, 3 feet 6 inches cylinder, 9 feet stroke, 3 feet 6 inches brass pump, with two boilers. For further particulars, and orders to view, apply at the Office of the Locomotive Department, Bricklayers' Arms, Old Kent-road, London. TENDERS must be lodged with the Secretary on or before THURSDAY, the 1st instant.

G. S. HERBERT, Secretary.

STEAM-ENGINE and BOILER.—TO BE SOLD, a Ten-horse Power High-pressure STEAM-ENGINE and BOILER, both quite new constructed for the purpose of being worked in the factory where they now are, but not now required for that purpose.—Inquire of Messrs. BUNNETT and CO. Engineers, New cross-road, Deptford.

STEAM BOILERS of every description, Wrought-iron Girder Bridges, Gas-holders, and General Castings, Chains, Cables, and Contractors' Iron Work, manufactured by MELROSE and HUSSEY, Phœnix Works, Tividale, near Dudley.—London Office, 78, Hatton-garden.

Medieval Works, Memorials, Fonts, Screens, etc.

AT A VERY ECONOMICAL RATE.

SAMUEL CUNDY, Mason and Builder, PIMLICO MARBLE and STONEWORKS, Belgrave-Wharf, Lower Belgrave-place, Pimlico.

MARBLE CHIMNEY-PIECES manufactured by improved machinery. The public are invited to view the stock, unequalled for quality and price.

A GOOD MARBLE CHIMNEY-PIECE FOR FORTY SHILLINGS.

A liberal discount to the Trade.

MARBLE WORK in all its branches, at a remarkably cheap rate, for HALLS, DAIRIES, LARDERS, &c. &c.

Circulars sent on application.

N.B. The "Royal Blue" omnibus passes the Works every ten minutes from Bank.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bancer Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Baths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their stock as above, where everything will be chanced at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

---

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established in London the most extensive Depot of statuary, Veins, Sicilian Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Cresent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade exactly on his own account. Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti begs that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated throughout Italy, England, and America.

THE MARBLE WHARF, Thames Bank, Pimlico, adjoining Vauxhall-bridge.—THOMPSON and HOLMES, Marble, Wood, and Stone Brokers and Contractors, and Italian Agents. Every description of English, Italian, Belgian, and other Marbles. Temporary Office, 8, Crescent-terrace, Millbank.—General Landing Wharf.

TO SCULPTORS, MASONS, AND BUILDERS.

MESSRS. BRINE (BROTHERS), beg to inform all consumers of Marble, that they have entered into a contract with the ANZOLINI COMPANY, Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy and the first two carnose, consisting of Statuary, Veins, and Sicilian, will arrive next month. They already have 100 blocks of Vein and Sicilian to select from, at their extensive depôt, Great Northern Wharf, Canal-road, Kingsgross, where may also be found a large slab of various descriptions, sawn by their powerful machinery.

H. W. WILKINS, Manager.

ITALIAN and GALWAY MARBLE QUARRIES.

Depôt, Whitewall Wharf, Parliament-street, Westminster.

Now landing Twenty Blocks of Large Statuary, suitable for Sculpture, &c. some opened to view.

Fifty Blocks of good Vein and Sicilian, &c. &c.

Also, 100 Tons of Galway Black Marble, in blocks and slabs of large dimensions.

Apply to Mr. FRANKLIN, Proprietor of the Quarries.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the Proprietors own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. WM. HUSTLER, Proprietor.

CAEN AND AUBIGNY STONE.

GATES and GEORGE (late Luard, Beddham, and Co.) CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, are supplying the above, and Portland, Yorkshire, and other Stones, at the current price, from CAEN WHARF, ROTHERHITHE, LONDON. Goods delivered by land or water conveyance, and by vessel, to any part of the United Kingdom.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Veri Antique, Brocatella, Dove St. Anns, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amier Marble, for Boudoirs Breakfast-Rooms, best and secondary Bed-Rooms, &c. also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

GALLERY of SCULPTURE in MARBLE of Messrs. A and F. TRISCORNIA, of Carrara, proprietors of quarries and dealers in marble Commissions undertaken for all kinds of works in sculpture. On view, for Sale, a select and Collection of Statues, Groups, Fountains, Chimney-pieces, &c. arrived from Italy, at 481, New Oxford-street, opposite Museum street.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

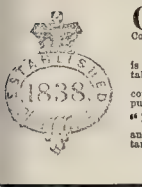
SOUTH WALES RAILWAY.—Notice is hereby given, that the next HALF-YEARLY GENERAL ORDINARY MEETING of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Paddington Station of the Great Western Railway, on FRIDAY, the 26th day of AUGUST instant, at ONE o'clock precisely, for the General Purpose of Business. The Transfer Books will be Closed on the 15th instant, and will not be re-opened until after the said Half-yearly General Meeting on the 26th instant.

By order of the Directors,
FREDERICK G. SAUNDERS, Secretary.

South Wales Railway Office, 10, Finsbourne-terrace, Paddington, London, August 3, 1854.



GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manures, Drain and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small hollow diameter tubing resisted a press ure of 25 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c. JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also made to resist great pressure, suitable for attaching to the mains of water works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop-cocks, roses, and jets complete. Vulcanized India-rubber suction pipes for pumps, any length or size, to order. HOSE for brewers' use, fire engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

GOODYEAR'S VULCANIZED RUBBER. Steam packing from one-sixteenth to one inch, in sheets, or cut to shape, for manhole-plates, piston-rods, steam joints, steam-chests, cylinder-heads, &c.; steam-engine and brewers' hose, gas-tubing, machine belting from 3 to 14 inches width, railway belting from 3½ to 16 inches width, washers, discs, valves, and buffers; steam gauge pipe, India rubber cloth, bands, bills, and toys, overshoes and boots, for the case in hand, or in stock. Crockett's Leather Cloth.—DODGE, BREWSTER, and CO. American Importers, 22, Coleman-street, City, London.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

CLARIDGE'S PATENT. — Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious material), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE.
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS IN GREAT BRITAIN where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament. A Liberal Discount allowed to the Trade.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or re-toned in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, and in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.

CARPETS, plain or in rich Velvet pile, with appropriate Borders.

PAPER-HANGINGS of various kinds.

OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture

The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.

14, Wigmore-street, January, 1853

The reversionary bonuses to the assured average 53 per cent. on the amount of premiums paid by them

The business of the Company embraces every description of risk connected with life assurance.

Loans continue to be made to assurers on undoubted personal or other security. WILLIAM RATRAY, Actuary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

THE SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of £100 and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of £50 and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY. Those who effect insurances with this Company are protected by its subscribed capital of £500,000, of which nearly 140,000 is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st October, 1853 the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same source to	100,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

CAPITAL, ONE MILLION STERLING

The whole Paid up and Invested for Half a Century.

GLOBE INSURANCE, Cornhill and Pall-mall, London. Established 1803.

FIRE LIFE ANNUITIES, REVERSIONS

James W. Freshfield, esq. M.P. F.R.S. Chairman.
Fowler Newsam, esq. Deputy-Chairman.

John Edward Johnson, esq.	Josiah Wilson, esq.
Richard Lambert Jones, esq.	Benjamin G. Windus, esq.

The New Tables adopted by the Globe include Two Scales of Life Premiums, the one low, and Non-Participating, combining with moderate rates those principles of security which have distinguished the Company in public estimation.

Two-thirds of profits appropriated to Policies.

One-third of the premium may remain unpaid as a debt upon the policy.

Facilities afforded to Insurers.

Insurance to the extent of TEN THOUSAND POUNDS on a single approved life.

Every class of FIRE and LIFE Insurance business transacted.

Prospectuses, with full tables and details, and forms, may be had at the Company's offices, or of the Agents.

WILLIAM NEWMARCH, Secretary.

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE A-SURANCE SOCIETY,

James John Knill, esq.	Rev. P. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The Profits are accumulated for the exclusive benefit of the Policy holders under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premium. Policy-holders participate in profits after payment of two annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the Assurances in 1853 considerably exceeded those effected in any previous year, the number of policies issued being more than 400 and the annual income thereon being upwards of £15,000. It also appeared that, except in 1849, when the visitation of the cholera took place, the claims were from deaths were in every year, much below the estimated rate.

The Members present at the Meeting were much satisfied with the Report, and resolved unanimously that a Reduction of 33½ per Cent. should be made in the current years Premium payable by all Policy holders now entitled to participate in the profits.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured	Annual Premium originally paid	Allowance of 33½ per cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 8	14 5 10
30	1,000	25 3 4	8 1 8	17 1 8
40	1,000	31 18 4	10 13 8	21 4 8
50	1,000	43 18 8	15 7 8	28 11 0
60	1,000	72 17 6	24 18 9	51 19 6

London: WALTON and MABERLY, 28, Upper Gower-street, and 27, Ivy-lane, Paternoster-row. Sold by all Booksellers.

TO INDIA-RUBBER MANUFACTURERS, WATER-PROOFERS, AND OTHERS.

A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet, TO BE SOLD, with the concern thereto belonging in consequence of the parties retiring from that branch of the business. The premises built with steam-engine and shafting large, and all the machinery requisite for preparing, mixing, and drying India rubber in sheets, thread, &c. The whole now in full working order. Term, for a few years, could be had at a moderate rent. Apply for further particulars at Mr. LAHEE'S, Lodge Offices, 60, New Bond-street, London.

TO ARCHITECTS, BUILDERS, AND OTHERS.

THE LEASE TO BE SOLD of spacious PREMISES, covering an area of about 2,300 feet (superficial), in the heart of the City, near the Bank of England, rent, on account of Government, only £80 per annum. For particulars apply to Messrs. PRICKETT and SON, surveyors, 34, Southampton-buildings, Chancery-lane.

WALTON-ON-THAMES.—TO BE SOLD,

a very valuable FREEHOLD SITE for a public building or gentleman's residence, with appurtenances attached.—Apply to JOSEPH CLARKE, Esq. Architect, 13, Stratford-place, Oxford-street.

SHOREDITCH.—Compact LEASEHOLD PROPERTY—FOR SALE, the valuable LEASE of about sixty years of large PREMISES, situated close to the High-street, and containing a building of three floors, each 31 feet by 25, with a good light, and built in a very superior and convenient manner; also, large stabling, with loft for hay, &c. above, together with plenty of yard accommodation for carts and other stores, the whole accessible by a large gateway leading direct into the public road, and held at the small ground-rent of 5s. per quarter. The above is situate close to a large thoroughfare, and within very easy access of the city of London; presents an opportunity to persons requiring large manufacturing premises not often to be met with so near the heart of the metropolis.—Application, to be made to Mr. W. C. RALPH, 4 and 5, Bateman's-row, Shoreditch, prepaid.

TO BUILDERS AND OTHERS.

TO BE SOLD, CHEAP, TWO SIX-ROOMED CARCASSES in Willis's-road, Kentish-town. Ground-rent, 8l.; lease, seventy years.—For particulars apply by letter, prepaid, to J. LEWIS, Esq. late BREWER'S HALL, Camberwell-green, S.E. Pancras.—Also a quantity of slates of all sizes, from 3l. per 1,200.

BUILDING LAND, in a picturesque part of the country, fifteen miles from town, and within 300 yards of a station on the North-Western Railway.—TO BE SOLD, FIFTEEN ACRES of FREEHOLD LAND, upon which good building rents can be obtained, and would be found worthy the attention of land and building societies.—For particulars, apply to Messrs. TOPLIS and SON, 10, St. Paul's Churchyard.

VALUABLE LEASEHOLD PREMISES.

The Committee for conducting the affairs of the Royal Hospitals of Bridewell and Bethlem will meet at BRIDEWELL HOSPITAL, New Bridge-street, Blackfriars, on TUESDAY, the 25th day of AUGUST next, at TWELVE o'clock precisely, to receive TENDERS for taking on LEASE, for twenty-one years from Christmas, 1854, the HOUSE and PREMISES, numbered 2, in Riches-court, Lime-street; now on lease to Mr. John Young. Tenders, sealed and endorsed "Tender for Premises Riches-court," must be delivered at the Clerk's Office, Bridewell Hospital, before TWELVE o'clock on the 25th of AUGUST next, and part or offering are to be in attendance. The Committee do not pledge themselves to accept the highest or any Tender. Printed particulars, and the form of Tender may be had at the Clerk's Office any day between the hours of TEN and FOUR o'clock.

Dated the 26th of July, 1854. B. WELTON, Clerk.

VALUABLE LEASEHOLD WATERSIDE and other PREMISES, at Wapping.—The Committee for conducting the affairs of the Royal Hospitals of Bridewell and Bethlem will meet at BRIDEWELL HOSPITAL, New Bridge-street, Blackfriars, on TUESDAY, the 25th of AUGUST next, at TWELVE o'clock precisely, to receive TENDERS for TAKING on separate LEASES, for twenty-one years, the following PREMISES, viz.: The Wharf and Premises on the south side of the High-street, Wapping, numbered 231, 232, and 233, abutting west and on Wapping Dock-stairs, now in the occupation of Messrs. Fisher and Wilcox, from Christmas, 1854; the Wharf and Premises on the south side of the High-street, Wapping, numbered 234, 235, and 236, now in the occupation of Mr. Chas. Morton Hudson, from Lady-day, 1855; the Wharf known as Starr's-wharf, on the south side of the High-street, Wapping, together with several extensive stacks of warehouses or granaries in Anne-market-street and Union-street, now in the occupation of Mr. Major Osborne, from Michaelmas, 1854; and a small House and Shop now unoccupied, on the west side of Old Gravel-lane, Wapping, numbered 54, from Michaelmas, 1854. Tenders, sealed and endorsed "Tender for Premises at Wapping," must be delivered at the Clerk's Office, Bridewell Hospital, before TWELVE o'clock on the 25th of AUGUST next, and parties offering are to be in attendance. The Committee do not pledge themselves to accept the highest or any Tenders. Printed particulars, with the form of Tender may be had at the Clerk's Office any day between the hours of TEN and FOUR o'clock.

Dated July 26, 1854. B. WELTON, Clerk.

TO BUILDERS AND OTHERS.

TO BE LET, FREEHOLD BUILDING LAND, fronting the Edgeware-road, in a situation where good houses are in demand. Ground-rent moderate. Advances made, and houses may be had on the ground. Apply to Messrs. TEMPLE and WINSOR, 5, Bucklersbury, Finsbury-square.

MANUFACTURING PREMISES.—TO BE LET, in the neighbourhood of Soho-square, large and commodious WORKSHOPS, with stables, coach-house, and cart entrance to same if required. Apply to Mr. COX, 16, Glasshouse-street, Regent-street.

TO BE LET on a long lease, or SOLD at a moderate price, the largest UNFINISHED HOUSE in Brighton. Money advanced at 45 per cent. to builders or others to complete the house.—For further particulars, apply by letter to A. B. No. 11, Serle street, Lincoln's-inn-fields.

TO IRONFOUNDERS, ENGINEERS, MANUFACTURERS, &c.

TO BE LET or SOLD, by Private Contract, the LEASE of an IRONFOUNDRY, sixty-seven years unexpired, situate in Kilburn-street, Gloucester-road, North-Western Railway Station, Watling-street, &c. The Plant, with partners, may be had of applying to WM. COOKE, Lessee, on the Premises.

P.S. If the property should be employed in another business, the ironfounding trade will be carried on in the neighbourhood.

TO BE LET, WATERSIDE PREMISES, consisting of covered buildings, 70 feet by 30, staging lofts, wet dry dock, and other buildings.—Apply to Mr. HARDWORTH, Fox and Hounds, Stratford, Essex, next to Bow Bridge.

The Builder.

SATURDAY, AUGUST 12, 1854.

THE main purpose of Mr. Ruskin's new pamphlet, entitled, "The Opening of the Crystal Palace considered in some of its Relations to the Prospects of Art,"* is to repeat his protest against the restoration Gothic buildings, now going on in Europe, d to propose the formation of an association ganised so as to maintain active watchers in ery important place, who should first furnish e society with a *perfect* account of every monu- nt of interest in the district, and afterwards rnish a periodical report on the state of these onuments, and of the changes proposed to be ade on them; "the society then furnishing nds, either to buy, freehold, such buildings or her works of untransferable art as at any time ight be offered for sale, or to assist their pro- ietors, whether private individuals or public odies, in the maintenance of such guardianship was really necessary for their safety; and xerting itself, with all the influence which such association would rapidly command, to event unwise restoration and unnecessary struction."

We said this was the main object of the mphlet: in truth, however, beyond a proper rotest against the ignorance which puts for- ard the Crystal Palace as the result of a new *der of architecture*, it is its only object, occu- ring fifteen out of its nineteen pages, so that e title is a misnomer, and serves but to mis- ad. In the case of a less known and less rnest writer, this would be regarded as a sort trick to take advantage of the life in a current pic. Mr. Ruskin is not likely to be so mis- epresented, but it nevertheless seems to us to e an error in judgment open to animadversion.

In his introduction the writer bears honourable stimony to the value of the extraordinary llection formed at Sydenham, and to the me- anical ingenuity displayed in the erection of he Crystal Palace.

"For the first time," says he, "in the history f the world, a national museum is formed in hich a whole nation is interested; formed on scale which permits the exhibition of monu- ents of art in unbroken symmetry, and of the roductions of nature in unthwarted growth,— ormed under the auspices of science which can ardly err, and of wealth which can hardly be xhausted; and placed in the close neighbour- ood of a metropolis overflowing with a popula- ion weary of labour, yet thirsting for know- edge, where contemplation may be consistent ith rest, and instruction with enjoyment."

And he properly estimates the influence of he institution on the minds of the working lasses. "How many hours once wasted may ow be profitably dedicated to pursuits in hich interest was first awakened by some ccidental display in the Norwood palace,—how many constitutions, almost broken, may be re- tored by the healthy temptation into the country air,—how many intellects, once dor- ant, may be roused into activity within the rystal walls, and how these noble results may go on multiplying and increasing and bearing ruit seventy times sevenfold, as the nation ursues its career,—are questions as full of ope as incapable of calculation."

Most fully do we accord in this belief, and most anxious are we that the thousands, taught "how to observe," should be led to avail them- selves of the advantages it offers. Here are illustrations of the works of all peoples and of all times, and weighty and valuable are the lessons they will teach, and the delights they will confer, if conscientiously and properly studied. Each time that we walk through its glittering precincts we feel more fully its value as an educational institution, and greater fear lest this should be overlaid. An important step is being made by affixing to each example concise particulars, its date and author's name, as we early urged should be done. Our present busi- ness, however, is not with the palace, but the pamphlet.

We go fully with the author in his desire to preserve the fine works of the past for the coming generations, and grieve with him at the tendency of modern improvements to make "a world without a record, and without a ruin;" though we can scarcely suppose, as he does, that it is because there is something in the solemn aspect of ancient architecture, which in re- buking frivolity and chastening gaiety has be- come at this time literally *repulsive* to a large majority of the population of Europe:—

"Examine," he writes, "the direction which is taken by all the influences of fortune and of fancy, wherever they concern themselves with art, and it will be found that the real, earnest effort of the upper classes of European society is to make every place in the world as much like the Champs Elysées of Paris as possible. Wherever the influence of that educated society is felt, the old buildings are relentlessly destroyed; vast hotels, like barracks, and rows of high, square-win dowed dwelling-houses, thrust themselves for- ward to conceal the hated antiquities of the great cities of France and Italy. Gay prome- nades, with fountains and statues, prolong themselves along the quays once dedicated to commerce; ball-rooms and theatres rise upon the dust of desecrated chapels, and thrust into darkness the humility of domestic life. And when the formal street, in all its pride of per- fumery and confectionary, has successfully con- sumed its way through the wrecks of historical monuments, and consummated its symmetry in the ruin of all that once prompted to reflection or pleaded for regard, the whitened city is praised for its splendour, and the exulting in- habitants for their patriotism—patriotism which consists in insulting their fathers with forgetful- ness, and surrounding their children with temp- tation."

The value of an ancient building is not suf- ficiently estimated;—its importance as a land- mark in history, its power as a chastener of the feelings, and its worth as a teacher. New streets may be built at any time and any where, but the footprints of the past once destroyed can never be reproduced.

Mr. Ruskin, however, goes farther than we do. In his previous work, already referred to, he says, the necessity for restoration is "a necessity for *destruction*. Accept it as such, pull the building down, throw its stones into neglected corners, make ballast of them, or mortar if you will; but do it honestly, and do not set up a lie in their place;" and in the pre- sent pamphlet he says the same thing, though not in such precise terms. Now, in the case of what is simply a memorial, this doctrine might, perhaps, be supported, although even then, if it were a beautiful design, it would surely be a matter for consideration whether, if it were utterly decaying, it would not be better to re- tain an honest restoration of it—even an artis- tic copy—than lose the "thing of beauty" alto- gether?

But in the case of our cathedrals and churches, to which the inquiry more particu- larly applies, these are structures with a pur- pose—structures needed—often with fine sound interiors, though crumbling to ruin externally; and the apathy and ignorance of former times having failed to maintain them, we have no alternative but careful and artistic restoration. To discourage this is to commit wrong. To put into the mouths of the numerous class who would do nothing the cry that the architect who urges the necessity of restoration is but seeking to obtain "a large and steady income," is as unwise as it is unjust, and should be com- bated by all who are interested in the architec- tural antiquities of the country. Care, of course, in such works, cannot be too constantly insisted on. These buildings belong to the heart of pos- terity.

With regard to the association proposed by Mr. Ruskin, the conductor of this journal sought, some years ago, to lead the "Society for Opening Public Monuments" to resolve itself into a society for their Preservation, and to arrange an organization throughout the country on the model of the French "Historical Committeee of Arts and Monuments;" but was not successful. At the present moment it might be effected with less difficulty, a central body entering into correspondence with the numerous provincial and continental archæo- logical and architectural associations which now exist. As to the provision of funds for the purchase of ancient buildings, we should not have much hope; but great good might be done without this, by bringing public opinion to bear in favour of threatened antiquities.

To those who have the care of our ancient edifices—shrines of thought, houses of memory— we would say, as we have often said before,— Maintain, in order that restoration may not be required; remove the causes of evil; keep the earth from the walls and the water from the roof; point the joints, repair the decaying por- tions, and support the whole with a loving hand; so shall they long remain to tell us of our fore- fathers, and how they thought and how they worked; to calm the thoughts of the eager strivers of to-day, and to gladden the hearts and tutor the eyes of thousands yet unborn. A Gothic church, says Coleridge, "is the petrifac- tion of our religion." Every old building is the petrifaction of a page of history: let us religiously preserve them.

* London: Smith, Elder, and Co. 1854.

THE FRENCH EXHIBITION OF 1855 AND ENGLISH ARCHITECTS.

THE French have thrown down the gauntlet to the whole world, as we did in 1849, and invited the arts, manufactures, and commerce of every civilized nation to enter into competi- tion with her, and exhibit the productions of their skill and intelligence at Paris in 1855. With greater respect for the fine arts than we had, the French Government have set apart a special and no insignificant portion of the struc- ture to receive the works of the painter, the sculptor, the architect, engraver, medallist, and, in fact, of every class of the arts of design. For above 300 years the French Government have done all in their power to naturalise the arts in France as they are in Italy, and have spared no expense to further the studies of the artist, and afterwards by munificent commis- sions to render his talents available for the honour of the nation and delight and instruction of the people. But there has also been a deeper purpose, and that has been to render France the centre of attraction for all Europe, and the productions of her artisans, in which taste could be displayed, such as to supersede those of any other country; and the result has been that her textile fabrics, her paperhangings, and her fur- niture have exclusive possession of many foreign markets, and they obtain a preference on account of their elegance before others of even superior merit for texture and durability.

The glove is down then to our architects as it is to every other class of our artists, and it behoves them to be up and doing to indicate their pretensions to take rank with the men of other countries. We have no apprehension of the result if our countrymen will only do justice to themselves. We have men of genius, men of earnest temperament, capable of great things, when the opportunity presents itself, if they will but give themselves fair play. The Govern- ment, whether Tory or Whig, has been scan- dalously indifferent to the progress of architec-

ture. They have shirked miserably almost every opportunity of embellishing the metropolis, and where in other countries the authorities would have eagerly seized an occasion of erecting a fine monument, the cry here has been, for how little can it be executed? It is whispered already that the contemplated new buildings for Downing-street are to be as bare of adornment as possible, and perchance they will be of brick with scanty stone-dressings. If Government be niggardly in such matters, it depresses and throws back individuals and public bodies, who become infected with the like spirit. London cannot vie with the monumental magnificence of Paris; but there are other fields of success open to our architects, and of these they have nobly availed themselves, and their productions may vie with those of other nations, that is in the application of architecture to the ordinary purposes and necessities of every-day life. We must leave royal palaces to the French, and the supremacy of sumptuousness of Roman Catholic splendour to her Madeleine, her Notre Dame de Lorette, or her S. Vincent de Paul, upon each of which several millions of francs have been expended. How rare the instance in which *private*, not municipal, munificence has bestowed 10,000*l.* upon any single church of the Anglican ritual But we have of late years built our thousand parish churches, and for ten or twenty or thirty thousand pounds we have seen spring up around us fanes, effective, practical, and eminently religious in sentiment: witness also our splendid clubs, our town-halls, and county courts, some of our town residences and country houses, our prisons, hospitals, asylums, colleges, museums, and occasionally a union workhouse. In each class of these we would undertake to find many specimens of enlarged intelligence and good taste. Germany may send her Walhalla, her glyptotheques and pinacotheques, and other pseudo-Greek or pseudo-Italian or pseudo-mediæval erections; but we doubt whether, with the exception of her Berlin Museum and her Dresden theatre and picture gallery, and some of Schinkel's noble efforts, she will maintain the glory that shines around her name. Italy's time is past for the present, to rise once more, we hope, and ere long to take her stand in the onward course of Europe's progress in the arts and sciences. So we augur well for our countrymen, and trust they will not let the occasion slip. The Greeks of old engraved on slabs of marble and plates of brass the names of her gallant band of heroes who beat back the Persians, and the victors at the sacred games received special honours in their native towns. The names of those of our architects who now press forward to maintain the honour of their country and their art, will deserve to be enshrined. The nation will honour the zealous exertions of those who on French ground successfully contest the palm with the most distinguished men of all nations.

The instructions issued are more precise and clear than we expected could be the case. The works contributed may consist of drawings or models of useful and ornamental architectural works or designs, in illustration of—1. Modern subjects; 2. Studies from celebrated antiquities; 3. Approved structural inventions, contributing to architectural beauty and magnificence; and 4. Parts and details. Such works may have been executed at any period of the architect's life, and may have been previously exhibited. In all cases the architect only is to be the exhibitor; and whatever models or designs are accepted for exhibition, must have been professionally tendered by architects of established reputation. In all drawings, unnecessary width of frame or margin must be avoided, and the frames must be rectangular.

Proposing exhibitors must, on or before the 15th inst. send in, filled up, a form, which can be procured from Marlborough House, containing a description of the works proposed for exhibition, their size and value; which form must be sent in to Capt. Owen, and not to Paris, as no communications will be received on the subject but through the commissioner appointed by each country for the purpose; and every endeavour will be made to save all exhibitors individual trouble and expense, the conveyance to and from Paris, as also insurance, being at the charge of the two Governments.

As of course the space for exhibition will to a certain extent be limited, a careful selection is indispensable: and we feel assured that the committee for architecture, appointed by the board, will exercise a sound discretion, consistent with the duty they have to perform of admitting only such works as shall be creditable to the English school, and ensure an honourable representation of the art and science of architecture of the empire; but also so as to do justice to individual merit. The time for sending the various objects will be towards the end of the year.

We feel confident that our architects, English, Scotch, and Irish, will nobly respond to the invitation of the French people, and earnestly co-operate in this national object of giving that position to English architecture, among the schools of Europe, which will place in a prominent point of view the skill, the intelligence, and taste of our countrymen: the opportunity lost can never be regained. Praise to those who do their best to vindicate the honour of Old England in any branch of intellectual excellence.

ON THE TOPOGRAPHY AND ANTIQUITIES OF CONSTANTINOPLE.*

We now leave the Asiatic suburb of Constantinople, and for a general survey of the places I have so far described, I shall ask you to accompany me to the top of the Seraskier's tower (F).† It stands within the inclosure of the old Seraglio, and on the highest ground in Stamboul. From this advantageous position the spectator may trace the outlines of the seven hills on which the city of Constantine, like Rome, was built. The space occupied by these seven hills was divided into thirteen regions: the one on the opposite side of the canal made the fourteenth, although it was the thirteenth in numerical order. The XIV. regions were, no doubt, in imitation of the internal arrangements of Rome, made by Augustus: by the help of the "Notitia," and by the measurements given in it, we may ascertain much of the topography of the ancient city.

The Seven Hills of Constantinople.

The number seven is all the resemblance that exists between the hills of Rome and those of Constantinople: no renown hovers above the Byzantine topography: the hills have not even names, and glory has not left so much as her twilight to preserve them from oblivion: they may, however, be traced, and their outlines be as strongly drawn as the Esquiliæ and Viminal, and the Quirinal of Rome, which is not saying much. A topographical survey of the city of the East is not complete without them, but I shall do little more than point out to you their positions, by citing the most conspicuous buildings which stand upon each. The first may be limited by the Seraglio walls, and comprises all the space on which St. Sophia and its appendages now stand (A): the second may be traced from the Mosque of Sultan Achmet (B), in a line towards the Osmanea (C); and the Bezestein, "the burnt pillar," to which we shall shortly return, stands on the most elevated part of it, and its outline may be followed towards the Propontes at the Tchatladi Capoussee (20): these two hills may be considered as comprising the site of the ancient Byzantium. The third hill is crowned by the splendid Solimanea (E) and its extensive dependencies: it comprises the ground on which stands the Mosque of Sultan Bajazet (D), including the Seraskier's Tower on which we are supposed to be standing, and reaching to the Validè Han, falls away towards the port. The fourth hill begins with the Aqueduct of Valens, and comprising the ground which rises above the old quarters of the Janissaries, it ascends to Sultan Mahomet's Mosque (G), and turns by the south side of the Fanar into the valley west below the old Seraglio. The fifth hill is distinguished by Sultan Selim's Mosque (L), and comprises all the Fanar down to the Golden Horn. The sixth hill, if hill it may be called, includes about one-third of the entire space within the circuit of the walls, extending lengthways from below the Mosque of Sultan Mahomet to the seven towers. In the year 413 Theodosius enclosed this space, and thirty years after, when the wall had been thrown down by an earthquake, it was restored by the Præfect Cyrus, whose glory so far eclipsed that of Theodosius the younger, that the people proposed to change the name of that part of the city, and call it Cyropolis. Theodosius became jealous of the restorer of the walls, and it is said put him within the strong walls of a monastery, after having caused him to be shorn, and there he died of grief. The remaining hill reaches beyond, and comprises the quarter of the Blachernæ which was left without the walls of Theodosius. The Emperor Heraclius added this to the city, and so entitled it to be called seven-hilled. The most conspicuous object on this seventh hill is Meribos Sultana Djami. I have already remarked, that as there were seven hills, so were there also fourteen regions: each contained a number of public buildings which are enumerated in the "Notitia," but little remains of any of them to tell the tale, or to give the antiquary the pleasure of disputing. Time, war, fire, and the destructive tendencies of the Turks, have effaced the monuments of former ages, and if we would enjoy the view from the Seraskier Tower, we must invoke the muse of history, rather than the sullen genius of antiquity. We are here on the theatre of the world's exploits. A narrow channel divides Asia from Europe, those two quarters of the world which until modern times had monopolised the human race and those arts which adorn its existence: the very waters of the Bosphorus are immortalised by deeds consigned to the lasting page of history. Over it once passed the innumerable phalanxes of Darius, the ten thousand warriors of Xenophon, and the crusading hosts of the pious Godfrey. Upon it the celebrated Doria destroyed three hostile fleets in a single battle. Beyond it rises the first city in Asia, Scutari, the ancient Chrysopolis. Near it, keeping one of the portals of the Propontis, is Kadikeu or Chalcedon, the school of sacred learning, but the scene of religious disorder. Around us at our feet are the hills we have just been tracing out, marked by some conspicuous object which tells us we are in the city of the Sultans. The gigantic Mosque of St. Sophia is not entirely despoiled of that reverence which belonged to it in the days of John Chrysostom. The eye runs over the magnificent port crowded with skiffs, and carrying a whole city of souls upon its buoyant waters. Opposite is Galata, the work of the Genoese, once the emporium of the world, and still distinguished by the colossal towers which defend it. The countless habitations continue as far as the view extends up the Bosphorus and the Canal. On the south glitter, on the Sea of Marmora, the Isles of the Princes, Akalki, Antigone, and Proti, the alluring retreats of the idle and wealthy; and finally the horizon is bounded by the azure tops of 1,000 far-famed hills, amidst which, as a sovereign among his subjects, towers the lofty Olympus. We shall now descend into the streets of Constantinople, and see what the ravages of time and fire have left for the antiquary and the topographer, and what recompense we have under the Mahommedan regime for the loss of our Roman buildings.

Constantinople under the reigns of Arcadius and Honorius (who divided the empire between them into East and West, A.D. 380) contained 4,388 houses: besides fourteen extensive palaces or mansions, it contained eight thermæ or large bath establishments, two basilicas, two forums, two senate-houses, two theatres, fifty-two porticoes, 153 private baths, twenty public swimming schools, the purple column, two other honorary columns, and one colossus, a mint, a capitol, four harbours, a circus, together with cisterns, nymphæa, and other objects necessary for a great city: thirteen curators and sixty-five vico-magistri had the care of the whole; and there were at that time only fourteen churches. It will be seen from the above enumeration, that the City of the East bore no comparison to Imperial Rome, either in the splendour or quantity of public edifices. The Goths and Vandals spared more of Rome than the Turks have done of Constantinople, and the basilicas and museums, supplied by popes, have by far outshone in splendour and magnitude the

* See page 401. † See plan, p. 399.

mosques and hanès of a line of sultans. The Hippodrome (d) is the first object of antiquity that attracts our notice, and upon its now disfigured arena, "we are met by the shades of Justinian and Belisarius." The Turks call it by a name which denotes its original purpose, Atmeidan, or the place of horses. Septimus Severus first made a circus in the midst of the ancient Byzantium, modelled, no doubt, after the Circus Maximus at Rome, and this afterwards became the Hippodrome: the space which was the arena is yet clear of buildings. Three monuments of antiquity remain in their original positions—1. A half-ruined pyramid of stone, which it appears from an inscription was covered with bronze by Constantine Porphyrogenitus; 2. The twisted column of the bronze serpents; and 3. An Egyptian obelisk: all these stand in a line, and I have little doubt they formed some of the ornaments of the Spina: there is a bas-relief on the obelisk which I take to be a representation of the Spina: from the stone pyramid to the twisted column I measured forty-seven paces, to the obelisk twenty-two: the whole length of the Hippodrome I calculated at 1,000 feet, that is about half the length of the Circus Maximus at Rome. I need not stay to describe the Pyramid of Stones: it is a rude work and merits little observation; but the twisted column is one of the most interesting classical monuments in existence: no one ever doubted that this curious relic was brought from the Delphic temple, and was the consecrated offering of the Greeks after the glorious defeat of Xerxes. Gibbon dwells upon this relic with delight, and even his sceptical mind admits that it is genuine. It now stands about 11 feet above ground: three serpents' tails are twisted together into a column: their heads supported the golden tripod, which, of course, has disappeared. Mahmoud with a stroke of his battle-axe broke one of the serpents, and the other two heads have gone with the golden tripod. If this relic were still at Delphi, it might be doubtful whether it should follow the destiny of the Elgin marbles; but our allies, the Turks, are little curious upon these classical subjects: they have long ago scratched Arabic characters upon the folds of this Delphic column, and in the hollow of the bronze they have amused themselves by inserting stones. Under these circumstances I would encourage the idea of enriching our national depository of antiquities with the Twisted Column, and I should imagine that a piece of cannon, being of equal weight with the bronze, would be considered an ample equivalent for a useless piece of antiquity. The obelisk was set up in the reign of Theodosius, as it appears from inscriptions still legible on the lower plinth of the pedestal. It would occupy me some time if I were to attempt to describe and translate the bas-reliefs, and inscriptions, Greek and Latin, which are seen on the four faces of the obelisk. I hope the task may be performed by some of our centurions during the vacancy at Constantinople. The four steeds of brass now glowing before St. Mark's, at Venice, "their gilded collars glittering in the sun," were taken from this Hippodrome, and most probably stood over the Porta Pompæ, that is the gate by which the processions entered the arena, through the middle of the "Carceres." The factions of the blues and greens, which once shook the walls of this Hippodrome, have long since ceased; but the scenes of cruelty and bloodshed of which this arena was the witness, inflicted such a wound on Oriental Christianity, that Mahommedanism had at last an easy victory. The Moslem has now enjoyed his triumph of a thousand years: his dusky wings have overspread the fairest regions of the East.

"While blasted by his crescent's dreadful glare,
The bloom of science and of genius dies!"

There were several triumphal columns in Constantinople, one in honour of Theodosius, which stood on the seventh or most remote hill, and on each side were the statues of Arcadius and Honorius. These are no longer existing, except in the pictures of Gentile Bellini; but near to the Avret Bazaar there stands a pedestal sustaining the Torus of a column's base, and this was the pillar of Arcadius. Not far from the Shah Zadi Dgiami (M), or mosque of the sultan's son, stands a column called by the Turks "Kistash," or the Virgin's stone (F): the basement and pedestal are of marble, the shaft of granite, and it has suffered by fire: on the upper plinth we can still decipher the three words *Quod Tatianu sopus:* but the English traveller, Wheeler, read the whole inscription. It was erected to Tatian, by the Emperor Marcian, who ascended the Byzantine throne in 450. The capital is a ponderous weight of marble placed on a tall shaft, and it would require all the skill and knowledge of this Institute to explain the winged figures and the monograms which appear on the capital and the pedestal. Such caprices generally mark a period of decline in art and genius, not unlike some authors, who, for want of originality, fill up their pages with inapt quotations, and try to conceal the theft. The aqueduct of Valens is best seen near the At Bazaar, or horse-market: its origin, no doubt, is Roman, but its conspicuous rows of arches are chiefly the patchwork of the sultans. The next object of antiquity worthy of notice is the Burnt Pillar, which has attracted the special notice of travellers (*e*): it is of porphyry, the shaft composed of several pieces, the jointures concealed by garlands: it is now bound in several places with iron bands to keep together the calcinated pieces loosened by the fire: it is said to have been brought by Constantine from Rome, and on the top was a statue of Apollo; on the upper part is an inscription bearing the name of Manuel Comenus as the restorer. When Mahmoud II. entered Constantinople, the Greeks had a prophecy, that when the invaders arrived at the Burnt Pillar they would be stopped by the destroying angel; but the prophecy did not come true. Pocock observes, that Arius died near this column: very near to it are the subterraneous cisterns, two of them now dry, and only used for spinning silk and making ropes: in one of them (h), I counted five divisions supported by thirty-two granite columns of perfect symmetry: the second is said to have 1,001 columns, which is just the number of stories in the Arabian Nights Entertainment, but I did not take the trouble to verify the number. There is a third cistern which still serves the original purpose (k): it is called Batan Serai, and Gyllius counted in it 336 columns: it best explains the nature and objects of those large works made by the Greek Emperors for supplying the city with fresh water: they appear to have attracted the attention of our countrymen more than any other object of antiquity, and I can conceive a practical engineer, or even the commissariat, preferring the Cisterns to the Burnt Pillar or the Twisted Column. The rest of the antiquities of Constantinople must be sought for in the walls of mosques and in the gardens of the inhabitants: fragments of marble are frequently turned into stepping-stones in the street, and pieces of statues inserted into houses: you occasionally stumble over a broken shaft, or you may hurt your shin against the corner of a votive altar: you may fancy you have found an inscription which is to throw light upon your topography, but approaching to read, it turns out to be a verse of the Koran, or Mahommed is his prophet. There is yet, however, much that an antiquary, if he had time and a pickaxe, might evolve out of "the double night of ages and of ignorance;" and perhaps this new sort of a column into which English, French, and Turks are twisted now, may lead to some excavations that will bring to light a work of Phidias, or one of the oboli dropped into the begging bag of Belisarius! I did not profess to attempt any account or description of the modern buildings of Stamboul,—not for want of matter, but for want of time; but before I conclude this paper, I will venture upon two specimens of existing objects respectively belonging to the religion of Turks and Christians, I mean a mosque and a church. The mosque of Sultan Achmet, erected in 1610, is doubtless one of the finest buildings the Turks ever produced: it is the only one that has six minarets. The Osmanea, built by Osmyn III. is also worthy to be mentioned. The Validè, built by the mother of Mahomet IV. is another of the chief Turkish temples, but the mosque I shall take as a specimen is the one I obtained access to, the Solimanea. The Sultan Soliman XIV. Emperor of the Turks, was fully entitled by the laws of the Koran to erect a temple, for he had subdued provinces in three out of the four quarters of the world; he was contemporary with Charles V. and struck terror into the European sovereigns. Returning from his conquests of Rhodes and Bagdad, he reared this stately mosque, where the rules of Mahommedan architecture are strictly followed: it was mainly built out of the spoils of the ancient Chalcedon. A fine quadrangular court, like the cloister of a monastery in form, is supported by ancient columns of granite and porphyry: in the midst is the fountain for the religious ablutions of the Mussulmans: the whole magnitude of the interior is displayed to the eye of the stranger at his first entrance. There are no nefs or subdivisions to obstruct the full comprehension of the whole space enclosed. The dome, supported upon four splendid granite columns, covers the whole space on which we stand, and, Pantheon-like, gathers and eats up all the air around it. The lamps suspended and crossed in all directions, add as little to the simplicity and dignity of the interior, as the innumerable wax-lights and festoons of the Romans add to their basilicas. On the side opposite the entrance are several stained glass windows, reported to have been done by some artists from Persia: the colours are rich, but generally much deeper than in our cathedrals. The Keblè, or Caaba, is on the same side: here the chief Mufti says his prayers: on his left he has an elevated pulpit from which he expounds the Koran: opposite this are the seats of the Mollah: these are arranged as systematically as any of our modern Sedilia. On the right, but not conspicuous, is the Sultan's seat whenever he chooses to pray at the Solimanea: behind the pillars and in the recesses of the walls are seen the worshippers, some praying, and others reading the Koran aloud, copies of which, as our Bibles used to be in days of scarcity, are chained to the walls. We walk round the whole of the interior with shoeless feet upon smooth matting (the Caaba only is carpeted), and a Mollah keeps an eye upon the Giaours and their piastres, as they dare to violate this sanctuary of Islamism. Near to this mosque, in a garden, is the Mausoleum of Soliman and his relations, an octagonal building covered by a neat dome, but I must omit the detailed description. The number of imperial mosques are seven in all, a remarkable coincidence with the seven basilicas of Rome: these (I mean the mosques), are—S. Sophia, Sultan Mahomed, Sultan Selim, the Solimanea, Sultan Achmet, the Osmaynea, and the Sultan Bajazet. Except the one of Sultan Achmet, they have all four minarets each, and large groups of cupolas.

As the specimen of a Christian place of worship, I shall take the patriarchal church of St. George, which stands just within Petri Capoussi, a gate of the Fanar. In entering the court the visitor is seized with a shuddering fit when he is told that he is passing under the beam to which the aged patriarch Gregory was suspended, in his pontifical robes, on Easter Sunday, 1821. The Jews took his body, and with mockery and insult threw it into the canal, mutilated and bleeding. The thrilling effect which this inhuman murder produced throughout Christendom, contributed greatly to the Greek cause, which issued in independence. The interior of the cathedral boasts of no richness of material, but it is kept clean: there is a screen in better taste than in most of the Greek churches. They show the episcopal chair of burnished wood, which is said to be the cathedral of John Chrysostom, but this seems to be too much even for the credulity of an Asiatic Greek Christian. The column to which they say the Saviour was bound, is held in greater veneration: the expounder did not seem to be aware that there were several others in the Latin part of the world. The frieze under the gallery is painted by some Italian artist, who, perhaps, followed in the steps of Bellini from Venice. A coarse mosaic of the Virgin, and some ordinary Greek paintings, decorate the walls around the inner sanctuary, and the gilding of the screen is perhaps the richest ornament the Oriental church possesses. This cathedral, for such we must call it, can accommodate 600 or 700 persons at one time, and it is the largest and best conditioned Christian

temple in Constantinople: close adjoining to it is the patriarch's dwelling, a remarkable contrast with the splendid palaces of his brother of the west. "The most Holy Anthemos" seemed to me to be more happy with one chamber to sleep in, and another in which to drink his coffee, than his more fortunate competitor for sacerdotal dominion, with eleven hundred chambers at the Vatican, and a palace at Castel Gandolfo. But here we pause. I dare not venture up the Bosphorus into the Black Sea, although there are many objects of classical interest which that excursion would afford. If the Peace Society should allow the war to go on for another of your sessions, I shall think it my duty to tell all I know of Beicos Bay, and the fortresses on both sides the stream, built by French engineers during the latter half of last century, perhaps for French artillery to knock down during the present. Constantinople has its Campagna as well as Rome, and the coast of the Euxine Sea is now becoming as celebrated as the Lavinian shores. We do not know what another year may bring forth, but some great change is inevitable.

It is still possible we may have an excavation in Constantinople, and a free admission for Franks into Santa Sophia. The patriarch may possibly get an additional wing to St. George, and the Crescent and the Cross may appear on the same standard which is to wave on the ruins of Sebastopol and avenge Sinope; "*sed nos hæc gaudia haud cognamur*,"—you will not be surprised to hear, "that the weapon which my Spirit yields is of another temper." I have more confidence in a Peace Society which was instituted eighteen centuries ago, and which has been waging war with the powers of evil ever since, but its legitimate weapons are not of steel, nor its artillery of brass and iron: it proposes to overcome, and finally to triumph, by the simple proclamation of "Peace on earth and goodwill towards men;" and I look forward to the sower going out to sow in peace when the battle of the warrior has ceased. The highway to the East will be made for all nations, and who knows but the Jews may dwell in their own land. The artist may make his cheap excursion in the same steamboat which will carry the biblical student to the land of Armenia; and the architect may still measure the columns which are concealed at Derbe and at Lystra where the gods were supposed once to have come down in the likeness of men. The gates of Constantinople shall stand open to receive the civilising influences which always follow in the train of the Christian missionary: witness New Zealand and Sierra Leone, and the regions round about Abbeokouta. A summer excursion will be more easily made than it was in 1834, when the humble individual who has now tried your patience, gathered up the materials which have enabled him to compile this paper, chiefly out of his own book, on "The Topography and Antiquities of Constantinople."

R. Burgess, B.D

REMAINS OF CLASSICAL ARCHITECTURE IN ROME.

At a recent meeting of the Oxford Architectural Society, Mr. Plenderleath, B.A. read a paper, illustrated by photographs and drawings, on "The Remains of Classical Architecture in Rome," in the course of which he said,—To the long period of the republic Italian architecture owes but very little. Among what it has left us, however, I may mention the tabulariums upon the Capitol, now crowned with the Palace of Senator (in Canina's speculative restoration of which I am afraid I cannot agree), portions of several fine viaducts, and the tombs of the Scipios, and of Cecilia Metella. The latter, the

> "—— Stern round tower of other days,
> Standing with half its battlements, alone,
> And with two thousand years of ivy grown,"

which Lord Byron so eloquently describes, is to me one of the most striking of these venerable buildings, bringing down to us as it does the name of a simple Roman matron, while the fame of so many of her great political contemporaries is now lost, and their mausoleum levelled with the dust. It has always been a favourite theory of mine, although I have no authority for it, to connect the name of Cecilia Metella with that exquisite nameless veiled figure in the first room of the Vatican, which few persons can fail to remember.

Coming to the period of the emperors, I shall begin with that extraordinary mass of mind known as the Palace of the Cæsars, which was commenced by Augustus about the time of our Saviour's birth upon the Palatine, and subsequently enlarged so as to take in part of the Forum, and of the Capitol, Cælian, and even Esquiline hills. Some remains of panelling and fresco here are curious; and equally so, a small pointed squinch, which I discovered in a corridor round what the local guides call the theatre, which comes to a singular angular termination. I deeply regret to say that a portion of what was the palace has been enclosed within the grounds of a miserable sham-classical building, known by the unmistakeably indicative designation of the Villa Mills, a wretched red-and-yellow summer-house belonging to which occupies the most prominent position upon the summit of the hill.

To Augustus we owe those three exquisite Corinthian columns now universally recognised as having formed a part of the Græcostasis. In saying "universally," however, I should except Mr. Bunsen, that Archæological Niebuhr, who appears to consider no theory worth anything which has ever been held by any human being before himself. He considers it to have belonged to a temple of Minerva Chalcidica, but this idea is, I conceive, entirely without foundation.

The pyramid of Caius Cestius, the only one in Rome, and also that noblest, though simplest of all ancient remains, the Pantheon, date from the reign of Augustus. The latter was the first and the last thing that I visited, and never shall I forget the effect of that matchless portico. "It consists," says Murray, "of sixteen Corinthian columns of Oriental granite, with capitals and bases of Greek marble. Each column is composed of a single block, 46½ English feet in height, and 5 feet in diameter." The interior of the Rotunda, too, still in all its ancient perfection, the only temple which seems adapted for its new use as a Christian church, is wonderfully striking.

I may here mention two very interesting architectural relics, which are preserved in the cloister of St. John Lateran, viz. a column from Pilate's house at Jerusalem, and one from Herod's temple. The latter is reported by tradition to have stood between the Holy Place and the Holy of Holies, and to have been rent in two at the same time as the veil. Certainly there is no trace of art in the scissure, and there seems considerable collateral proof of the truth of the tradition.

One of the most striking features in a Roman landscape is the viaducts, many of which are very perfect. In one near Gaieta, I counted no less than 148 contiguous arches, one of which was built on the skew principle.

I must not omit to mention the Flavian Amphitheatre or Coliseum, a building so well known to every one as hardly to need description. I had the good fortune once to see this under peculiar circumstances, viz. illuminated. This is a sight which is usually granted only to regal or distinguished personages; but last winter, a number of English gentlemen obtained permission from the authorities to have it illuminated, upon the condition that no Italian should be invited to be present. And so well was the secret kept, that, among the thousands of spectators, I did not hear a single accent of the Italian tongue. The illumination was effected by a number of Bengal lights placed in concealment, and suddenly lighted at the sound of a bugle. The effect was wonderful: every stone in the old walls was thrown into brilliant relief, and the lower arches glowed like the furnaces of Vulcan with the strong red lights within.

Architectural Museum.—On the 7th, Professor Cockerell, R.A. delivered a lecture "On the Distinctive Characteristics of Greek and Mediæval Sculpture," at the Architectural Museum. We shall give an account of it hereafter. On the 21st, Mr. Scott will lecture "On the Progressive Changes in Ornament in the Successive Styles of Mediæval Architecture."

CHURCH-BUILDING NEWS.

Aldham.—On the 1st inst. the foundation-stone of the new parish church of Aldham, Essex, was laid by the lord of the manor. The porch and many parts of the metal-work of the old church are known to most of our readers from the illustrations in "Brandon's Analysis." These, we understand, will be carefully preserved and reproduced in the new church, which will in fact be a restoration or rebuilding of the old church on the new site, with the addition of a tower and spire. The inconvenience of the former site, added to the miserable state of decay into which the old church had fallen, determined the parishioners, under the able guidance of the rector, the Rev. C. Bannatyne, to adopt this course, and an excellent site has been procured, central as regards the parish, the gift we believe of the lord of the manor. Interest was excited on this occasion by the fact of the "first stone" being supplied from the old church, doubtless between 600 and 700 years old, and forming the base of one of the columns of the nave, which had ceased to exist in the memory of the oldest inhabitant, their places being supplied by wooden posts, and the stones in question being found hidden beneath the paving. The architect is Mr. E. C. Hakewill; the builder, Mr. Luff, of Ipswich; and the contract is for 1,477*l*.

Woodford.—According to the *Chelmsford Chronicle*, the new church just completed at Woodford-bridge, and dedicated to St. Paul, was consecrated on 18th ult. by the Bishop of London. The church is a Gothic structure, with a spire, and has been built, chiefly by voluntary contributions, on a site given by Lord Wellesley, for the benefit of the outlying parts of Woodford parish. It is intended hereafter to build a parsonage.

Aylesbury.—It is affirmed by several builders of the town, says a local paper, that the contractors employed to reseat the church, instead of using Riga oak (according to the terms of their contract), which would cost 10½d. per foot, have been using inferior oak, known as Memel, or pipe staves, which would only cost 3d. or 3½d. per foot. Mr. Benson, the honorary secretary to the committee for reseating the church, is in communication with the contractors on the subject.

West Barsham.—The parish church is about to undergo a thorough repair. New floors, seats, and roofs are to be supplied by Mr. Goggs, of Swaffham, and the works will soon be progressing rapidly.

Stourbridge.—A stained window has been placed in Kinver Church, to the memory of the late Mr. James Foster, of Stourton Castle. It contains six figures, the principal of which are Our Saviour, St. Peter (to whom the church is dedicated), and St. John the Evangelist, St. Peter being on the right, and St. John on the left of Our Saviour. It is executed by Messrs. O'Connor and Son.

Frampton-on-Severn.—Estimates from builders, &c. have been received by the minister and churchwardens of the parish for repaving the church and other works, as advertised for. Mr. Niblett, architect. The following are the several tenders for repairing and other alterations:—

Spire	£641	0	0
Hadley	500	0	0
Clarke	490	0	0
Coleman	471	0	0
Burr and Hewlett	470	0	0
Morgan and James	423	0	0

For boundary fence, the following were lodged:—

Waites	£428	0	0
Harding	425	0	0
Coleman	424	0	0
Butt and Morgan	381	0	0
Butt and Co.	367	0	0
Coole (accepted)	304	0	0

Aberdare.—St. Fagan's Church here was consecrated on Monday before last. It contains about 700 sittings. The nave is 68 feet long by 22 feet wide. The chancel is 29 feet long by 19 feet wide. The aisles are of same length as nave, and 11 feet in width. There are sittings for about sixty children provided in a chapel at east end of south aisle. The design is Early English. The materials of which the walls are

built is the Dufferyn stone, with dressings, &c of Bath stone. Memel timber, stained and varnished, has been employed in constructing the roofs and the seats. Red and black tiles have been employed for the paving of the chancel. A gallery has been erected at the west end of nave, against the wish of the architect according to the *Cambrian*, but yielding fifty additional sittings. The architect was Mr. Talbot Bury, of London: the builders were Messrs. James and Price, of Cardiff.

Charlton Kings.—The following tenders for the erection of a boundary fence (consisting of dwarf stone wall and iron palisading) round the churchyard and new burial-ground at Charlton Kings, near Cheltenham, have been sent in. Mr. George W. Sadler is the architect:—

	New Burial-ground.	Churchyard.	Total.
	£. s.	£. s.	£. s.
Niblett, Gloucester	783 0	349 0	1,132 0
Parry and Son, Charlton Kings	—	370 7	
Accepted, Cheltenham	650 0	350 0	1,000 0
Mallory, Cheltenham	516 10	260 0	776 10
Cornish, Cheltenham (not accepted)	459 0	226 0	685 0

Doncaster.—"Means are to be taken forthwith," says the *Doncaster Gazette*, "to stop the decay which is becoming apparent in the surface of the old Brodsworth stone now used for the internal ashlar of the new church. It is to be washed over with a thick wash, composed of lime and stone dust, frequently used for that purpose, which will completely exclude the action of the weather, until the church is roofed and glazed; and then it will be scraped off by the same drag which puts the final surface on the stone itself; for after it is covered in no further decay is to be expected. The internal mouldings and arches, however, are to be of new Brodsworth stone, power having fortunately been reserved in the specification to require new, if there should be any reason to doubt the expediency of using the old stone in these parts. It appears to be well known, that old stone refaced is more liable to decay than stone fresh from the quarry. The pillars, we stated some months ago, are to be of the much harder Crookhill stone, which seems to cut almost like cast-iron."

Liverpool.—The foundation-stone of the church to be erected by the Liverpool Church Building Society, in the Vauxhall-road district, and dedicated to All Souls, was laid on Tuesday week. The site is in Eaton-street. The plan of the church is in a great degree identical with that of Grassendale, Aigburth. There will be seat-room for 1,000 persons; and in lieu of an endowment fund, 650 of these will be free. The space beneath the church being already excavated, a crypt containing an area of nearly 500 square yards, and 8 feet high, remains to be appropriated. The Privy Council do not recognise schools in such situations, but so large a space could not be thrown away, especially in a district where so much is actually required. This large apartment, therefore, will be divided into a series of work-rooms, so that the young of both sexes may be in some degree familiarised with industrial and remunerative occupations.

Farnham.—The parish church of Farnham, near Knaresborough, has been restored and re-opened. As restored, the church consists of a Norman chancel, lighted by three windows (with two smaller ones above) on the east, and a like number on each of the north and south sides. The body of the church, with the exception of the shafts of the columns on the north side, which are like the chancel (Norman), is Early English. The tower, which is of the Tudor era, is built inside the nave, at its west end, the belfry arches supporting it being of a debased Early English, in imitation of those of the nave. The stonework of the arches has been freed from its many coats of plaster, and redressed. The roof has been restored to its original pitch, the intervals between the rafters in the nave being stencilled. The pews and gallery have been taken away and the body of the church fitted up with low open seats of the inverted Y form, and free to all. The windows of chancel have been filled with stained glass by Wailes, presenting on the north side—1, The Annunciation; 2, The Nativity; 3, The Epiphany: east end—4, The Ascension; 5, The Crucifixion; 6, The Resurrection: south side—7, The Sermon on the Mount; 8, Healing the Sick; 9, The Magdalene anointing the head of the Saviour. The two additional upper lights at the east end are the gift of Mr. Wailes. The chancel is floored with tiles by Minton (those within the rails encaustic) and fitted up with stalls, and is divided from the nave by a dwarf screen. The whole of the works have been completed under the auspices of Mr. G. G. Scott, Messrs. Bellerby, of York, being the builders.

Rushall.—The population of Rushall, a village and parish about a mile north-east of Walsall, having increased from 693 in 1831, to upwards of 2,000 at the present time, and the church also being out of repair, and accommodating only 200 worshippers, it was determined that the entire of the old fabric, with the exception of the tower, should be taken down, and a new edifice erected. On Wednesday in last week, the corner-stone of the new building was laid by Mrs. Mellish, of Hodsock Priory, Notts, the wife of one of the patrons of the living. Mr. Cranston is the architect, and Mr. I. Highway the builder.

Newcastle-upon-Tyne.—The John Knox Church, erected in West Clayton-street, near the Catholic cathedral, was opened on Thursday in week before last. The building is of stone, with ornamental open timber roof. It consists of a nave 66 feet by 34 feet, interior measurement, the side-wall of same 26 feet high and 50 feet to apex of roof. It has a side aisle 48 feet by 15 feet, divided from nave by four arches: height of roof 38 feet. There is a tower at north-west angle 22 feet square, which, when finished with spire, will be 115 feet high. The building is Early English in style, with treble windows at west end of nave, with joint columns, having an arcade and porch underneath. The east end of nave finishes with five lancet windows, intended to be filled with coloured glass, the points extending considerably into the roof. The aisle which fronts Clayton-street is lighted by seven lancet windows, having a buttress between each, terminating with a battlement. The interior is filled up with open seats capable of accommodating 510 hearers. The building is heated with hot water, lighted with gas, and ventilated. The whole is from the design of Mr. Dobson, architect. The masonry has been executed by Messrs. Wilson and Gibson; and the carpentry and ornamental joiner work by Mr. Ralph Reed. The total cost of the building, including the site, is about 3,000*l.*

NEW BUILDINGS IN GLASGOW.

Some considerable works are in progress at Glasgow, including an Established Church in Patrick-road, behind Sandyford toll-house; architect, Mr. Emmett, of London: and a schoolhouse in the vicinity of the College Church, High-street, in the old Scottish style; architects, Messrs. Baird and Thomson.

The *Commonwealth* gives a long list, of which we may mention a Unitarian Chapel in Terrace-street, at the end of Bothwell-street; architect, Mr. Rochead, of Glasgow. The estimated cost of this is 3,000*l.* A free church in Duke-street, close to Wellpark Brewery; architect, Mr. Hay. The New Wynd free church, situated near the ancient Cross of Glasgow. A Congregational Chapel in Great Hamilton-street; architect, Mr. J. Burnet: and a United Presbyterian Church in Main-street, Gorbals.

An application has been made at the Dean of Guild Court for leave to erect a new post-office building on the piece of ground at the corners of George-square and Hanover-street. The plans are of the Roman style of architecture. The building will be three stories high, exclusive of a sunk story to George-square, with a return of about 30 feet of the same height to Hanover-street, the rest of the building in that street being of a single story only, and lighted from the roof. According to our authority, the buildings will be far inferior to those erections which are put up every year by merchants for the convenience of their business.

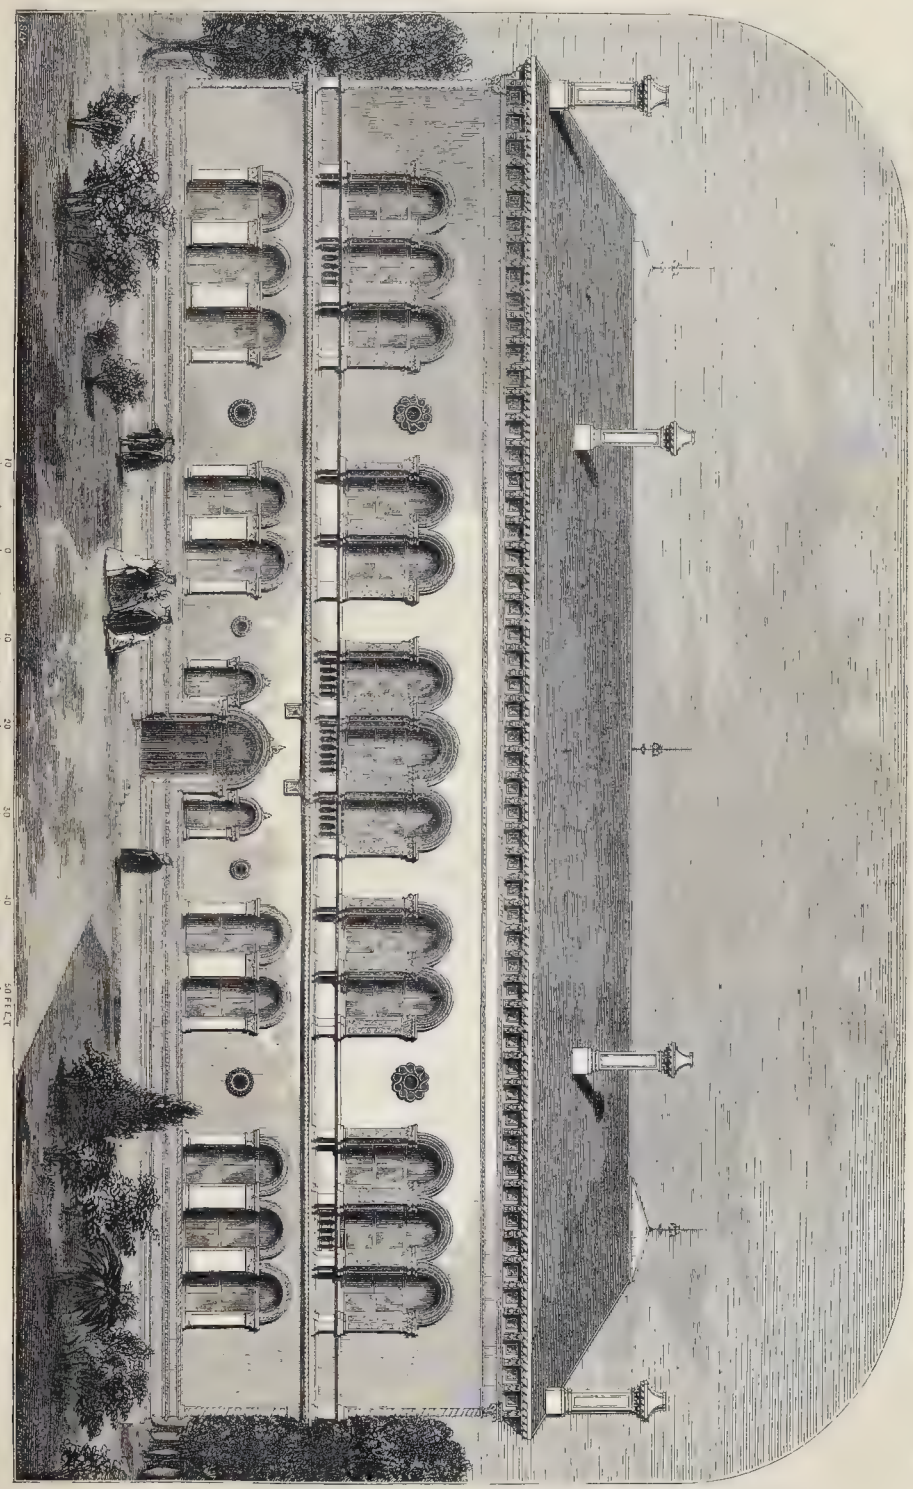
NEW MUSEUMS, &c. TRINITY COLLEGE, DUBLIN.

The accompanying engravings illustrate the new museums and lecture-rooms now in progress of erection at Trinity College, Dublin, under the direction of Messrs. Deane and Woodward, noticed in a former number of this journal.* It will be seen that the general style of the building is the Venetian form of the Renaissance or Cinque-cento style. The mouldings and carved work are, however, intended by the architects to be of somewhat earlier character, that is to say, as far as is attainable, Tre-Cento or "Giottesque." The general effect will mainly depend on the decoration and recessing of the openings, the carved string-courses, and bracketed cornice. The latter is a stone gutter with the dog-tooth notching and cable moulding on the lower edge, resting on double consoled brackets, between which are carved panels.

All the windows in the building are formed with semicircular arches with carved and notched mouldings, borne by square pilasters, or rather piers, with capitals and bases, those on the upper story having carved panels on the face, and, together with the arches resting on them, recessed in two orders. The lower ones are plain, but have carved capitals. Of the latter there are 108 on the exterior of the building alone, and it is proposed that of these scarcely two are to be exactly alike. The architects are seeking to carry out views lately advocated, by leaving the *design* of the ornament to the workmen themselves, in order to obtain variety; the only assistance afforded being verbal instructions from the architects as to the arrangement by geometrical forms, &c.

The piers between the groups of windows are relieved by lunettes or disks, filled with specimens of the various coloured marbles of Ireland red, green, purple, &c. after the manner of those on the Venetian palaces. The angles of the building are decorated with the Venetian twisted quoin moulding, finished with capitals and bases at the principal and middle cornices and base mouldings. All the exterior dressings are of Portland stone, the wall-facing being of county Dublin granite.

In the interior the dressings and the wall-lining of the outer and inner halls are of Caen stone: the staircase is also to be of Caen stone, with a polished marble hand-rail, and native marble of different colours is to be used in string courses and columns. The inner hall, and the corridors opening to it, at each end, by open arches, are to be covered by dome vaulting of hollow bricks, coloured and enamelled on the soffit, and discharging arches of the same material are to be turned over the Caen stone mouldings of all the arches. There will be bands also of ornamental open tiles round the walls (connected with the ventilation). By these means and a tesselated or encaustic tile pavement, a good deal of natural colour will be obtained, contrasting agreeably with Caen stone. The museums will have open timber roofs, the other rooms framed timber ceilings, with lath and plaster panels between the timbers. The inside dressings to the windows of the first-floor are to be in coloured bricks, similar to those used in the vaultings of the hall. The contractors are Messrs. Cockburn and Son. The amount of the contract is 25,000*l.* exclusive of galleries in the museums, and fittings.



The ventilation of the building is to be provided for in the following manner:—For the ingress of fresh air, a fresh air drain or pipe of earthenware, 18 inches diameter, is laid under the floors of the hall and lecture-rooms (these floors are 6 feet above the ground), from the east to the west sides of the building, opening into the air at each end by apertures above the plinth in the west elevation, at a height above the ground of 4 feet 6 inches, and opening into the hall, at the middle of its length, under the staircase, by means of a vertical branch pipe. The fresh air is supplied to the several rooms from the hall (which is to be considered as a reservoir of air for the purpose) by means of hollow bricks laid in the walls, the openings of which are to be covered by the bands of open tiles before alluded to. There is

* See vol. xi. page 430.

DOORWAY, TRINITY COLLEGE MUSEUMS, DUBLIN.

to be no regulation of the supply of air, no "exhausting" or "forcing-in powers," but as much vitiated air as is withdrawn (by its own levity) from the lecture-rooms, &c. so much and no more fresh air is to enter (in theory) to supply its place. There is to be no warming of the air for the purpose of heating the apartments, but means will be provided of slightly tempering it in very cold weather, by passing it through earthenware pipes fixed in a hot water cistern. The system of heating recommended by the architects, but not finally decided on, is by stoves constructed on a principle of heating by direct radiation alone. It only remains to describe the means provided for the exit of foul air, viz.,—small earthenware trumpet-shaped tubes are fixed between the joists on the lath and plaster, 18 inches from centre to centre, forming a sort of *diaper* over the whole of the ceilings (ground-floor). Through these, the vitiated air passes into the spaces between the joists, which thus become foul air trunks, opening into the external atmosphere at each end by openings in the middle cornice, and the wind passes through from one side to the other, cleansing them out, while any tendency in the vitiated air (or the wind) to fall back is to be prevented, it is hoped, by the form of ventilator, which rises to within half an inch of the under side of the slates forming the counter-flooring. The readers of our journal will not fail to recognise the source of some of the architects' inspirations.

TRINITY COLLEGE MUSEUMS, DUBLIN.—Messrs. Deane and Woolward, Architects.

PROVINCIAL NEWS.

Norwich.—Plans for the new free public library and museum have been submitted to the corporation committee. One plan has been approved. The front elevation is plain, and extends from the present museum to the corner of Duke's Palace-street, and the building will be 74 feet in length, and 55 feet in width. The basement is to include an additional room for the museum, 54 feet by 26 feet, a reading-room, 44 feet by 33, and a vestibule and hall at the corner. The first floor is intended to include two rooms for the literary institution, one 26 feet by 17 feet, and another 36 feet 3 inches by 36 feet; also a room for a library, 33 feet by 29 feet 6 inches, a back committee-room and private room, and a small reading-room.

Lydd.—Concrete of lime and beach sand has been extensively used here for the erection of walls and cottages, and is said to be as durable as bricks, and much cheaper.

Lurgashall, Sussex.— A new rectory house, with offices and stables, has just been built here for the Rev. S. Fairles. The walls are of Blackdown sandstone, in random courses, with dressings of the same material. Mr. William White was the architect, and Mr. Joseph Butler, of Sussex, was the builder.

Abingdon.—The local commissioners of paving here have entered into a contract with Mr. Tilney, of Leeds, for laying down 5,000 feet of Yorkshire paving-stone immediately in the footways where most wanted. The wearing away and tearing up of the asphalte has left many parts in bad plight, and their repair has become absolutely necessary.

Bath.—The committee appointed with the view of increasing the attractions of this city have determined to revive and extend the old Improvement Society, and various plans have been suggested; but the town council, as trustees of a large amount of property, in possession or reversion, should, it is thought, take the initiative, contributing from the city rates in proportion to the large property they hold.

Uttoxeter.—The ground in the market-place of this town is being broken up for the purpose of putting down a weighing-machine. The building, to combine the uses of a pump and weighing machine, will be erected on the site of the old conduit, and be of stone. The plan is Tuscan, with four sides, each presenting a front consisting of four pilasters supporting a pediment, on the apex a gas-lamp, the whole crowned by a semi-circular dome. The design is by Mr. Thomas Fradgley, of Uttoxeter, architect, and the whole is to be finished in about a month.

Manchester.—The new market here is rapidly progressing to completion, under the contractor, Mr. James Heywood, of Derby. The first column was raised on 18th January last, since which period the whole of the drainage, paving of the market and streets, and the covering in, has been completed, save some 1,500 square yards; and the local *Courier* calculates that the whole will be finished by the end of next month. The erection was entrusted to Mr. Robert Dawes, under the superintendence of Mr. James Heywood, jun. The bays are spanned with iron principals, 8 feet distance, the ends being set down on cast-iron girder gutters, which convey the water from the roof, and carry it down the columns to the drains. The roof is supported by cast-iron columns, the bottom plates being bolted through, and bedded in stone blocks 5 feet square and 2 feet thick, having a foundation of concrete. The internal columns are 11 inches in diameter, with foliated caps, with escutcheons over, covering the girder joints. The internal columns to Oswald-street are 13 inches in diameter, and have foliated caps and escutcheons over, with pierced elliptical spandrel arches supporting the cornice and girders. At the ends of Oak-street, Higher Oswald-street terminating each line of columns, are square-pierced pilasters, 18 inches by 18 inches, with foliated caps, from which spring bold open frame wood arches and screens glazed with strong sheet glass of Sunderland manufacture. There is 28 feet in width of strong rough sheet glass the whole length of each bay. The ventilation is by louvres the whole length: the remainder is covered with boards laid reversed diagonally from purlin to purlin, and covered with Welsh slate. The lighting after dark will be by gas lamps, six in each bay, suspended down the centre. The approximate weight of cast and wrought iron approaches nearly to 700 tons, the whole of the castings being made at the Phœnix and Derwent Foundries, Derby.

Bolton.—On the 29th ultimo, we stated, that in consequence of the groined arches which were to support the flooring of the new market house having been "made unequal in the construction" of them, they had fallen under the pressure of their own weight. To prevent misconstruction, we are asked to say, that it was from inequality in construction, to some extent destroying their equilibrium, as stated in Mr. Fairbairn's report, and not from defective design, that the arches came down; and, moreover, that the accident, in the words of that report, "is not, however, of that nature to affect the ultimate security of the structure," if properly executed.

North Shields.—The baths and washhouses just opened in Saville-street and Church-way, stand on a piece of ground belonging to the Duke of Northumberland. Should the present building be found too small, it is hoped, according to the local *Gazette*, that the convenience of those residing at the two extremities of the town will be met by the erection of others, at the Low Lights, on one side, and Milburn-place or the Bull-ring, on the other. The architects for the present building are Messrs. Ashpitel and Whichcord. The boilers and cockle are placed under the washhouse, and on the ground-floor are two first-class ladies' baths, three first-class, and seven second-class men's baths, and a vapour bath, which, besides the pay office and the superintendent's house, occupy the front part of the building. The main portion behind, is a department for women, and contains twenty washing stalls, with drying closets, a pay office, and four second-class baths. The south end of the building comprises the two principal entrances, an office, and apartments above for the residence of the superintendent and family. The whole of the baths and washhouses are upon one floor. The largest room in the place is the washhouse department, which contains twenty distinct recesses. The contractors were Messrs. Rutter and Towns, of North Shields, for the builders' work; and Mr. Thomas Potter, of London, who had the engineers' work ——The new building in Norfolk-street, nearly completed, consists of an addition to the Albion Hotel, and three shops with extensive cellars underneath. The shop fronts are ornamental, with arched tops, carved caps, consols, &c. Each window is filled in with one square of plate-glass. Above the shops, archway, &c. and extending the full length of the building, is the large hall, which is 84 feet 6 inches long, 36 feet wide, and nearly 30 feet in height. The walls are panelled with wood to the height of 6 feet, and behind this a current of air can be regulated. Between the circular windows are pilasters with carved caps, having a truss running up to meet the moulded beams which divide the coved ceiling into compartments. There are three stone fire-places, with pilasters, carved caps, and trusses. Above the staircase is a gallery or orchestra, capable of accommodating above 100 persons. It is entered by a circular staircase. Behind the hall entrance are dressing and cloak rooms for ladies, fitted up with wash basins and other conveniences. Underneath the gallery is an ante, or coat room, for gentlemen. There are entrances to the hall from the Albion Hotel, as well as by a wide staircase from Norfolk-street. The hall is intended to be lighted with four circular chandeliers, each having sixty jets. The exterior of the building is of polished ashlar. The mason work and stone carving are by Mr. J. Ridley Robson, and the joiner work by Mr. Thomas Dawson, both of North Shields; the plastering by Mr. James Aitken; and the wood carving by Mr. Jobson, of Newcastle. The whole has been carried out from designs by, and under the superintendence of, Mr. J. E. Watson, of Newcastle, architect.

Glasgow.—The plan of Sir Joseph Paxton for the decoration of the West-end Park has been received by the city council, and is described in the local papers. It is proposed to form an island on the low grounds of Kelvingrove, a little to the north of the mansion-house, which will be connected by two rustic bridges. About the site of the present Kelvingrove-gardens, a circular flower-garden of 200 feet in diameter is shown on the plan, which is recommended to be covered in with glass, and formed into a winter-garden or promenade. There are three principal entrances to the park—one situated to the south-east corner of Clifton-street, another at the north end of Kelvingrove-road, and a third at the north-west extremity communicating with the road to Hillhead. The terrace in front and circling the whole ridge of the hill is approached by the steps at present in course of erection, and will have a public esplanade 30 feet in width, skirted by a flower margin and undulating surface in front. Along the wall enclosing the private pleasure ground appropriated to the fenars of the upper terrace, Sir Joseph proposes to form alcoves, or shady retreats similar to those on the terraces at Sydenham. The carriage-drive in and around the park will be 30 feet in breadth, and extend about two miles. The only drawback to the completion of the whole scene is the filthy river which forms the western boundary to the park, and the committee should see to its purification, which, it is said, can easily be done by the formation of a sewer parallel with Pinkston burn.

ARCHITECTURAL CONTRAST OF PARIS AND LONDON.

THE Council of the Society of Arts, considering that great public advantage would arise from contrasting the architectural state of Paris with that of London, have resolved to appoint a committee to consider the improvements which are in progress in the city of Paris, ascertain the cost and the system on which they are paid for, and report what suggestions they appear to offer for the improvement of the metropolis, especially with reference to the Thames and the principal thoroughfares.

The idea is a very excellent one, and we hope it will be effectively carried out.

THE TOWER OF ST. MARY'S, TAUNTON.

A MEETING of the ratepayers was held last week to take into consideration the report of the architects appointed at a previous vestry meeting to examine the tower of St. Mary's.

The following resolution was proposed by the churchwardens:—"That this meeting is satisfied by the report of Messrs. Manners, Cornish, and Scott, in confirmation of those of Mr. Ferrey and Mr. Giles, that no complete restoration of the tower can be effected without taking down and rebuilding the same; and that therefore the churchwardens be, and they are hereby authorised and directed to proceed forthwith to take down the said tower, and to rebuild the same, adhering strictly to the original design, down to the minutest details, and to use for that purpose the sums already authorised to be borrowed for the restoration of the tower."

After some discussion a poll of the parish was determined on; the result of which was—for pulling down the tower, 83; against, 295: majority against, 212.

The churchwardens stated that the subscriptions already obtained, amounting to 860*l.* were given for "the complete restoration of the tower," and must be repaid to the subscribers if anything short of such complete restoration be attempted without their consent. The expense already incurred, amounting to about 1,000*l.* including the scaffolding, would, in such case, fall wholly on the parish, and, they said, in a considerable measure be wasted.

We cannot suppose it is intended to allow the tower to fall to pieces, uncared for. It will be the duty of the churchwardens now to take the steps best calculated to consolidate and maintain it.

THE ART-UNION of LONDON EXHIBITION is now open in the Suffolk-street galleries, and will be found to contain a number of excellent works, especially in the landscape department. The places of honour in the large room are occupied by pictures by Mr. S. Cooper, A.R.A. and Mr. Uwins, R.A.

SCHOOLS OF PRACTICAL ART.

Cheltenham.—The annual vacation meeting of the School of Art, established in Cheltenham about a year and a half ago, was held on Saturday, in week before last, in the School-room, Winchcomb-street, where a number of specimens of drawings executed by the students, were exhibited. The attendance was composed chiefly of ladies. The proceedings were opened by Mr. Brown, the chairman, and Mr. Tartt entered more fully into the history of the school. According to the statements made to the meeting by Mr. Tartt, the number of quarterly tickets issued by the Cheltenham school during the past year, was six hundred, thus giving an average attendance upon the different classes, of 150, exclusive of the classes in the training and other schools, to which instructions were given at their respective school-rooms. It is satisfactory to learn that, although not yet self supporting, sufficient interest has been manifested in the movement initiated for art education in Cheltenham, to afford reasonable ground for hope that its future progress will prove of a more encouraging character.

Wolverhampton.—The opening of the school for Wolverhampton and South Staffordshire took place on Tuesday in last week, when the proceedings attracted a large and highly respectable assemblage. For the purposes of the school, as we have before noticed, a new building has been erected. The lower school-room of this building was almost completely filled by ladies and gentlemen, including the Earl Granville, the Earl of Dartmouth, Lord Lyttleton, Lord and Lady Hatherton, the Hon. A. Wrottesley, the Hon. E. R. Littleton, M.P. Mr. Thomas Thornely, M.P. Mr. J. Neve (Mayor of Wolverhampton), and numerous other persons of influence. Earl Granville having been for some time delayed on the rail, Lord Hatherton temporarily took the chair, and addressed the meeting, as did Mr. Cole, who in course of his remarks said that if we wished to infuse a love of art into the people of this country they must be taught its elements in their infancy. There were five schools connected with the school of design in Wolverhampton, and he hoped that when they next assembled together, the remaining ten or twelve schools in the town would be connected with it. He urged upon the corporations of towns to promote the teaching of elementary drawing in our public schools, and asserted that the permanent success of the Wolverhampton School of Design depended upon the seeds of art-education being sown broad-cast among the poor people of the town. He urged upon those present who could not draw to join the day classes for ladies and gentlemen, and by paying their guinea a quarter, contribute to support the institution, and train their clumsy fingers. He deprecated the maintenance of such an institution being made a matter of charity: begging subscriptions of people to teach artisans to draw well in order that manufacturers might make more money, and workmen get better wages, seemed to him repulsive and degrading. Earl Granville shortly after arrived. His lordship delivered a practical and sensible address. While alluding to the reasons why France had gone ahead of us in art as applied to manufactures, he deprecated an inclination which he believed still existed on the part of manufacturers to conceal the name of the artists who designed for them. In France it was absolutely used as a sort of puff to the article, to advertise as much as possible the name of the person who gave the design. And this, of course, gave a great stimulus to a man who had a character to support in this respect. In concluding his address, his lordship said,—"As a Staffordshire man, as a collier, and as an ironmaster, I do feel some pride that it is in the land of the tall chimneys, in the land of the blazing furnaces and almost eternal fires—undeterred by fire, or smoke, or soot—not discouraged by the eminently useful and practical character of the operations which are daily going out—that you should have set the example to the whole country of erecting a really magnificent temple of art—doing that without any extraneous assistance whatever, but carried on by the liberality, the energy, and the intelligence of the district itself." At this stage of the proceedings an address from the artisans' committee of the town was presented to Earl Granville. The address was engrossed upon parchment, and bound up in the form of a book, in morocco, gilt. The book was enclosed in a papier-maché case, designed and executed by the workmen of Messrs. F. Walton and Co. richly ornamented with pearl, the centre of the lid being formed of glass, with an inscription in gold on light ground. After the conclusion of the proceedings at the school, a company, numbering about 300, sat down to luncheon in the Corn Exchange, which had been decorated with banners, evergreens, &c. for the occasion. Earl Granville occupied the chair, and after the repast various other speeches were delivered, of which we regret that our space prevents us from giving any account.

Chester.—This school has been little more than a year in existence, but is said to be proceeding favourably. During the past year seven medals were awarded to the Chester students by the Government Department of Science and Art. The central school is held in the Mechanics' Institution rooms, and was to be re-opened after vacation on 2nd inst. It comprises various classes, including some for ladies and gentlemen and for daughters and wives of artisans, as well as for artisans themselves.

THE BUILDERS' BENEVOLENT INSTITUTION.

The seventh annual general meeting of this charity, founded for granting pensions and giving relief to aged and decayed members of the various building trades and their widows, was held last week, at the London Tavern, for the purpose of receiving the report, and upon other business; Mr. G. Bird in the chair.

Mr. A. G. Harris, the secretary, read the report, which stated that, during the past year, there had been two elections of pensioners, and three deaths—making the total now upon the funds twenty-four, viz. fourteen males and ten females. The sum paid for pensions since the commencement of the institution amounts to 1,390*l.* The annual ball held at Willis's Rooms realised a profit of 136*l.* 5s. 6d. being an increase over the preceding year of 15*l.* 19s. The report, after stating that Mr. W. Lee, M.P. for Maidstone, had consented to act as president for the year ensuing, and that the directors had determined to reduce the sum necessary to be collected previous to the building of almshouses, from 5,000*l.* to 2,000*l.*, concluded by expressing a hope that efforts would not be spared to increase the funds of the charity, and thus to make it one of the foremost among the many noble institutions which adorn this land. The subscriptions and donations received during the past year amounted to 1,206*l.* 18s. The directors have added to the funded stock 700*l.* Three per Cent. Consols, and the building fund has been increased by 400*l.*, making the total amount 4,350*l.*, divided as follows, viz., 3,050*l.* to the relief fund, and 1,300*l.* building fund.

The adoption of the report was carried *nem. dis.*; and after the usual complimentary votes of thanks, the meeting separated.

THE ORIENTAL AND TURKISH MUSEUM.

St. George's Gallery, Hyde-park Corner, which seems to have an ethnological mission, illustrating with completeness now the Chinese and then the Kafirs, is at this moment the site of a very interesting exhibition, setting forth Turkey and the Turks, objects of considerable regard at this time. There in their habits as they live, or rather did live, because the magnificent costumes of the country are being fast superseded by European modes of dress, we have the Sultan and his court, the Janissaries, officers of the Turkish army, religious functionaries, some of the beauties of the Sultan's harem, a bath, a shoe-shop, the delicate little slippers speaking flatteringly for—

"The fair forms which terminate so well;"

the famous porters, and, in fact, specimens of all sorts and conditions of men and women, including a group of Bashi-Bozouks, or irregular volunteers of the present Turkish army, — *very* irregular volunteers, if the accounts be correct. These fellows come from all parts, many of them from Albania; and the title means literally, it seems, disorderly head-gear. A glance round the Exhibition will remind visitors, what is the fact, that every rank and profession was formerly designated by its peculiar turban (very curious some of them are), and those persons who had no calling, and, therefore, no special head-dress, were called Bashi-Bozouks.

We need scarcely add, that we advise a visit to the Turkish Museum. Going on at this rate, we shall soon know all people better than we know—ourselves.

MISMANAGEMENT OF A BUILDING SOCIETY.

LAMBETH COUNTY COURT.

Gregory v. *Lighton.*—This was an action to recover 6*l.* and the evidence disclosed the way in which the Union Building Society, of Southwark, is *managed*. It appeared from the evidence that the plaintiff and defendant were, until recently, directors of the Union Building Society, and the latter feeling dissatisfied at the way his colleagues were conducting the affairs of the society, got himself into hot water, and attacked the management upon every opportunity. In July, 1852, a special meeting of the society was called, for the purpose of a sale of shares, and the defendant did his best to prevent the sale, by bidding against the promoters of the sale. The plaintiff and other directors, inimical to the defendant, bantered and insulted Mr. Lighton, telling him that he had no money to bid; and at last the plaintiff put 6*l.* into the defendant's hand, who told him if he persisted in forcing the money upon him, he should give it to some charity, which laudable object was duly carried out. The plaintiff now sought to recover the money back. In the course of the inquiry, the defendant acquainted the court with what occurred at this special meeting, when Mr. Lighton made the following revelation. He said he attended the meeting to state a few plain facts, and oppose the sale of shares. From the commencement of the society, in 1845, to 1850, there were 195 shares sold at a premium of 65*l.* to 55*l.* each member receiving an average of 60*l.* 4s. 8d. each share, which proved that the society was then in a most prosperous condition. In 1850 some of the directors agreed to have a speculation amongst themselves, and resolved to have a sale of shares, although the society had no money to lend, nor had the directors any money to offer the society as security, or any shares of their own to take up. He, defendant, bid at this sale, and ran the shares up to 55*l.* premium, which was a fair price, but higher than the directors intended to give, consequently only one share was taken. His colleagues told him he had done the society a great injury, by preventing the sale of fifty shares, but they would call another sale, and have them at their price; and if he would not bid against them, he should have as many as he liked, at the same rate as themselves. At the next sale he bid up to 44*l.* premium. The plaintiff and another director would not bid against him, and he could not bid against his own bidding, upon which he left off, when the plaintiff and another took fifty shares at the same low rate. Another sale was called, at which fifty more shares were sold to two of the directors, at 29*l.* 5s. premium. He told the board building societies were not intended for such gambling transactions, and he was censured for so doing. It had also been agreed that the chairman was to have five shares at half price, but he prevented this by bidding against him. The defendant at great length detailed some other extraordinary measures of the directors, and swore that the plaintiff had received 8,000*l.* on property not worth 4,000*l.*

The judge (Tayler) said it was not in human nature for a man to have such charges publicly made against him, and not feel hurt. He therefore thought the plaintiff was not likely to lend Mr. Lighton 6*l.* for the purpose of assisting him in his opposition to the plaintiff. He thought that the money was put in defendant's hands to insult him, and against his wishes.—Verdict for defendant, with costs.

ARCHITECTURAL PUBLIC LIBRARY.

Is there no one in the architectural profession who has the inclination, time, or opportunity, to make some efforts to establish an Architectural Lending Library?

I believe the want of such a thing has been long felt by the greater part of the profession. At a time when many are striving for architectural honours, and few of that many can obtain the best works on their subject, and on the sciences connected with it, such an institution is very desirable. The greater part of the professional works now published—and, what are of far greater importance, the works of the old masters—are entirely beyond the reach of students of the present day. Were such an institution as I am advocating introduced, by furnishing the student with lists of books, on the particular subject he wanted, it would enable him to choose those which he thought proper, and place him in a position to obtain a thorough knowledge of the subject. As it is, he reads that such and such a book is very valuable, and should be read by every student; but apart from his never having heard of it before, in nine cases out of ten, he cannot procure it. Doubtless such a thing could be made self-supporting.

H. J. T.

VALUE OF LAND AT SYDENHAM.

A jury was empanelled on Saturday, July 29th, at the Bridge-house Hotel, London-bridge, to assess the value of 3a. 1r. 4p. of land situate at the back of the North Surrey Industrial Schools, and facing the high road from Anerly station to Norwood, belonging to Mr. E. R. Adams, required for the formation of the West-end and Crystal Palace Railway. Mr. Adams's claim of 10,133*l.* including severance (being 9,000*l.* for land and 1,133*l.* for severance), was supported by Messrs. J. G. Hammack, Henry Crawter, George Smith, and Thomas Little. For the company were Messrs. R. A. Whithall, Charles Lee, William Rogers, H. A. Hunt, and D. Hoggart. The jury returned a verdict of 2,000*l.* for the land, or 610*l.* per acre, and 750*l.* for severance; together, 2,750*l.*

ST. ALBAN'S ABBEY.

IN reply to the complaints of "Archi," permit me to submit to his consideration and that of your other readers the following plain statement of facts. St. Alban's Abbey is simply a parish church, open only on the days appointed for public worship. In former times the casual visitor had to find the clerk, take him from his business, and for the trouble of accompanying him to the Abbey and around its curious antiquities, to present him with a handsome gratuity. When this worthy official died the rector sought to correct this unsatisfactory state of things. To ensure, therefore, greater facilities to the public, he provided for the constant attendance of a person at the Abbey itself, charging a moderate fixed fee of 6d. and making the verger a settled annual salary; any surplus that might arise being appropriated to those little expenses and reparations for which the parish was not liable. The rector considered it desirable to avoid the unseemly appearance of receiving money at the church, consequently tickets are issued to booksellers and other tradesmen in the town; and to meet still more the convenience of travellers, the landlords of two respectable inns have tickets, so that their customers may at once procure them without the trouble of going to any other place. Your correspondent complains that an additional 1s. is charged for going up the tower; but the truth is, that to meet the varied wishes of all parties, there are two classes of tickets, the one for admission to the lower parts, charged 6d.; the other for inspection of the lower and upper parts of the Abbey, charged 1s. the extra 6d. being a moderate remuneration for the additional necessary attendance—a not unreasonable charge, considering the paucity of visitors, the height the attendant has to mount in order to guide the frequently solitary visitor through the intricate passages, and to prevent accidents to incautious explorers. Objection is taken that special permission is required for making sketches. When it is considered how liable to damage are the delicately-carved monuments, and the frail nature of the soft Totternhoe stone of which they are built, as also the wanton destructiveness of unscrupulous curiosity collectors, it can hardly be considered superfluous to require personal application to be made at the rectory, immediately close to the church door, in order that from personal inquiry the *bonâ fide* character of the applicant may be ascertained; which being satisfactory, the permission required is granted at once, and the student is free at all times to enter and draw as much as he likes. In case of the rector's absence, the verger is empowered to afford every facility. It is due to this highly respectable officer and his modest, respectful daughter, who acts as his assistant, to state, that hitherto no complaint has ever been made of their conduct: on the contrary, their intelligence and obliging civil attentions have been the theme of general approval. Whatever may be the case at other buildings, it is ungenerous, by implication, to mix up the authorities of St. Alban's Abbey with the reputation of irregularities elsewhere.—M. I. B. A.

Notices of Books.

VARIORUM.

"THE Smoke Question simplified" is a lecture on a very important subject by one thoroughly qualified to treat of it—namely, Mr. T. S. Prideaux, patentee of the graduating valve for furnace-doors, and manager of the Smoke Prevention Company, Charing-cross, where the pamphlet is published, as well as by Mr. Weale, of High Holborn, whose "Economy of Fuel," it may be remembered, was written by the same able inventor. The lecture under notice was delivered before the United Service Institution, at the request of their own council.——"The Prudent Man; or, How to acquire Land and bequeath Money by Means of Co-operation" (Ballière, Regent-street, and the Friendly Societies' Institute, Pall-mall), is a little work by Mr. William Bridges, secretary to the institute just named, and comprises chiefly a system of Co-operative Colonization, together with rules for an Emigration and Land Society, by Mr. A. Scratchley, M.A. a well-known author.——"Elements of Geometry and Mensuration, with easy Exercises,—Part I. Geometry as a Science," by the Rev. Thomas Lund, B.D. is a sort of abridged and popularized Euclid, with practical exercises, and is designed for schools and adult classes. It is recommended as a preparation for "Geometry as an Art," which is to form the second part of the work. —— "The Prevention of Strikes, Lock-outs, and Turn-outs, by Means of Arbitration and Mediation," constitutes the tenth annual report of the Central Committee of the National Association of United Trades, presented to the annual conference held on 5th June last, and printed for the association. Its main object appears to be the national or universal organization of trades, and the transfer of all power as between masters and workmen into the hands of a workmen's association; at least, we cannot draw any other conclusion from the contents of the present "Report," which details, amongst other things, the active and organised assistance given by this "central committee" to various bodies of men engaged in positive or negative strife with their employers; and urges the deficiency of all present organizations for such purposes, and the immense advantages of a *national* organization of all trades.——"Orr's Circle of the Sciences," published by Messrs. W. S. Orr and Co. of Paternoster-row, has reached its thirty-first twopenny number, containing a portion of Professor Ansted's "Treatise on Geology," in which cements and mortars, building-stones, and other subjects of interest are treated of. A previous number constitutes a portion, on Algebra, of the Rev. J. F. Twisden's "Treatise on the Mathematical Sciences."—— The "Special Report of Sir Charles Lyell," on the "New York Industrial Exhibition," has been published by order of Parliament. It treats of mining and mineral products, and contains a sort of epitome of the geological formations of the United States, with an account of its natural building stones, limes, and other minerals, as well as its metals, &c.——A Report, by Mr. T. Wicksteed, C.E. on the most advantageous mode of dealing with the sewage matter of the metropolis, with a view to the preparation of sewage manure, has been published by authority of the Metropolitan Commission of Sewers. The construction of works on the solid manure principle, on at least four separate sites, and at a cost of not more than 1,000,000*l.* for the whole metropolis, is proposed.

Miscellanea.

ILLUSTRATIONS OF THE WAR.—To gratify the curiosity of the public as to the sites in the Baltic to which attention is now directed, Messrs. Dominic Colnaghi, and Co. have issued a series of views, from sketches on the spot, of Cronstadt, Sevastopol, Odessa, &c. To these they have just now added "Swenborg and Helsinfors," from sketches taken by Mr. E. T. Dolby, and various official documents; showing in a bird's-eye view the nature of the islands forming the fortifications of Sweaborg, the construction of the batteries, and the guns mounted upon them; together with the picturesque city of Helsinfors. It is executed in double-tinted lithography, by Mr. W. Simpson, and printed by Messrs. Day and Son.

BRISTOL ARCHÆOLOGICAL SOCIETY.—A meeting of the members of this society was held at the Philosophical Institution, Park-street, Bristol, on Tuesday in last week, Mr. T. Garrard in the chair, when Mr. George Pryce read a paper on "The Religious and Secular Guilds and Fraternities in Bristol during the Middle Ages;" at the conclusion of which a conversation on the subject ensued. Mr. Garrard then announced his intention to read at next meeting a memoir of Dr. White, founder of the almshouse in Temple-street; and Mr. Pryce his intention at some future time to treat upon a subject which he might call "The Underground Architecture of Bristol." It was extraordinary, he said, what beautiful cellars there were attached to many houses of the city, many of which he was surprised to find, when viewing them, had splendid groined roofs. He had recently walked through the subterranean passage leading from the river to the Guard House, and was about to explore the one leading from it into Wine-street.

CAMBRIDGE FREE LIBRARY.—Messrs. Gray and Son have undertaken, at a cost of 133*l.* to convert a chapel formerly occupied by members of the Society of Friends to the purpose of a free library. Two other tenders were sent in; viz. Messrs. Quinsee and Attack for 134*l.*, and Messrs. Bell and Son for 139*l.* The library will be formed by a horizontal gallery, and the basement of the building is estimated to hold about 200 persons. There will be no attempt at ornamental display, and it is calculated that the work will be completed by the month of September next.

RECENT EXCAVATIONS AT POMPEII.—A large house *in wood*, the walls ornamented with paintings and the roof with bas-reliefs, is said to have been recently uncovered.

TURNER'S BEQUEST TO THE NATION.—After discussion in the Vice-Chancellor's Court, as to Turner's pictures, it has been ordered, "that the pictures, drawings, and engravings shall, with the consent of the trustees of the National Gallery, who appear by counsel and submit to be bound by this order, be removed from Queen Anne-street to the National Gallery, to be there deposited in the rooms Nos. 1, 2, and 3, on the ground-floor, for safe custody, and there to remain, subject to the control and direction of this Court; and it is agreed that the pictures, drawings, and engravings shall not be shown or exhibited to, or inspected by, any person, or in any manner dealt with without the order of the executors; but that the same pictures, drawings, and engravings, when in the National Gallery, be in all respects considered as in the legal and actual custody of the executors. Let the executors transfer the insurances now effected, the keys of the rooms to be sealed up by the executors, or some one or more of them, and left in the hands of Mr. Uwins, or the keeper of the National Gallery for the time being, and held by him for and on the behalf of the executors."

THREATENED OMNIBUS STRIKE.—The metropolitan omnibus proprietors have held a meeting in resistance of a regulation issued by Sir R. Mayne, the chief commissioner of police, requiring that between the cushion on the seat and the shelving roof immediately behind the passenger, there shall be a clear height of 40 inches, and 54 inches from back to back, giving to each passenger 27 inches for his legs. The proprietors, of course, contend, that the requirements are unnecessary, and they talk of a withdrawal of their vehicles, unless Sir Richard's requirements be withdrawn. The Paris omnibuses, we believe, as well as those at Glasgow, Liverpool, and elsewhere, are much higher, wider, and more commodious than those of London, and why the proprietors of the latter should not expand their dimensions to those of the former, we cannot see, more especially considering the way in which they oblige the metropolitan public to submit to their capricious and exactive requirements.

SCHOOLS.—The Infant School at Lamberhurst, was publicly opened on 25th ult. It has been built entirely at the expense of Mr. W. C. Morland, and is of brick and stone, with a lofty open roof, and of late Gothic design. The residence for the mistress has a living room, kitchen, and two bed-rooms. The west window of the school is partially filled with painted glass, and the porch paved with encaustic tiles. The architects are Messrs. Caveler and Hooker, of Margate; the builder, Mr. Tompson, of Maidstone.——The foundation stone of a new Infant School for the parish of Gravesend and district of St. James, was laid by the Earl of Darnley, on Saturday in last week ——New Roman Catholic Schools have been opened at Claughton, in Lancashire. The building stands near Claughton Hall and Claughton Chapel. The design, comprising schools for boys and girls, was furnished by the late Mr. Tuach, architect, and the erection was entrusted to Mr. John Thompson, of Fleetwood, builder. The building is in the domestic style prevalent in the fifteenth century. The north front presents three gables, and two entrances. The interior comprises five compartments—a boys' schoolroom, 27 feet by 17 feet, a library and instruction room, 24 feet 6 inches by 20 feet; a girls' school, 27 feet by 17 feet, and cloak-rooms to each school, 12 feet by 8 feet. The material is stone from a quarry near Lancaster.

INSTITUTION OF MECHANICAL ENGINEERS, BIRMINGHAM.—A general meeting of the members of this institution, was held on Wednesday in last week, Mr. William Fairbairn, F.R.S. president, in the chair. The first paper read was by Mr. E. A. Cowper, of London, and gave a description of the iron roof of the central railway station, in this town. It was illustrated by drawings on a large scale; and an account was given of experiments made for testing the roof. In a paper by Mr. S. H. Blackwell, of Dudley, a description was given of Kind's apparatus for boring. A third paper was by Mr. Fairbairn, "On Dunn's Improved Steam Travelling Crane." Another paper read was "On a new Steam-engine Boiler," by Mr. Thomas Forsyth, of Wolverton. An instrument by Fessel, of Cologne, exhibiting the stability of the axis in a rotating body, was brought under notice by Mr. Siemens.

LIGHT, HEAT, AND MOTIVE FORCE FROM WATER.—The *Worcester* (U.S.) *Spy* announces that "Mr. Paine has overcome the difficulty arising from electric explosions, and has perfected his invention for producing light, heat, and motive power from the decomposition of water."

THE SEA-BOUNDARY.—The long-disputed question as to the boundary between land and sea has been at last settled. The Lord Chancellor, in a recent case, decided that the average medium of all tides, spring and autumnal, formed the limit of the right of the Crown.

Railway Matters.—The traffic returns of railways in the United Kingdom for week ending July 22, amounted to 397,321*l.* and for the corresponding week of last year to 362,012*l.* showing an increase of 35,309*l.* The gross receipts of the eight railways having their termini in the metropolis, amounted for the week ending as above to 183,711*l.* and for the corresponding week of last year to 168,356*l.* showing an increase of 15,355*l.* The increase on the Eastern Counties Railway amounted to 3,281*l.*; on the Great Northern to 2,939*l.*; on the London and North-Western to 3,616*l.*; on the London and Blackwall to 356*l.*, on the London, Brighton, and South-Coast, to 2,946*l.*; on the London and South-Western to 703*l.*; and on the South-Eastern to 1,936*l.*: total, 15,777*l.*; but from this must be deducted 422*l.* decrease on the Great Western, leaving the increase, as above, 15,355*l.*——The London and North-Western dividend for the past half-year will be at the rate of 5 per cent. per annum, with a balance of about 30,000*l.* to be carried forward to the December, or better half-year. Revenue, it is said, has been burdened to the utmost extent with everything that can be legitimately charged against it.——A new difficulty has arisen amongst the engine-drivers. About 100 of the drivers and firemen employed by the North-Western Company met lately at the Monarch Tavern, Hampstead-road, on the subject of certain grievances, to which, as they allege, they are subjected by the present management of the locomotive department of the southern division of that line. It appeared that, among the things they particularly object to, is the contract system. Lists were handed in from various stations, requesting Mr. Rawlins, the solicitor for the men, to lay their names before the directors as objecting to the contract system, and praying inquiry into the management of the locomotive department. A committee was appointed to conduct the negotiation on the part of the men.

A Novel Reading-room.—Several stands for newspapers have been placed along the promenade of the new "Lion Arcade" at Huddersfield, and the *Times* and several local journals placed upon them. Placards are posted up in the town inviting the working classes to visit the arcade, free of charge, a request which the *Leeds Intelligencer* says has been amply responded to. The object of the proprietor is said to be to make the arcade a rendezvous for the working classes.

Builders' Holidays.—We have had notices of very pleasant holiday doings, to which several masters had of late invited their workmen. As these very commendable manifestations of good feeling on the part of masters are becoming general, it would appear to be somewhat invidious to single out a few for special notice.

New Engines, Steam, and Air.—Mr. Thibbets, of Washington (U.S.), has invented a steam-engine, the peculiarity of which is, that it has no boiler, but at each stroke of the engine a small quantity of cold water is forced through a small generator, consisting of an inner and outer cylinder, the water occupying the space between, and thus becoming heated into steam.——A hot-air engine has lately been patented by Mr. Philander Shaw, of East Abington, Massachusetts. The cylinder is an oscillating horizontal one. The air-pump takes in air from the compressor, where it is maintained at 60 lbs. on the square inch: from this it is admitted into the tubes. The heater is composed of a series of tubes, forming a coil, connected with a perforated rotating top plate, moved round by the vibrating beam. This heater gives time for the air to be heated. The hot air, after acting upon the piston, is employed to feed the fire, thereby effecting a considerable saving in fuel. It is intended to have a stream of cold water circulating through the compressor, so as to carry off the heat of air developed by compression, and thus have the air in as condensed a state as possible when it enters the heater. The engine, it is alleged, has been approved of by several scientific and practical engineers.

Disfiguring Church Doors.—I wish I could induce you to condemn a barbarous practice in vogue with churchwardens, viz that of screwing boards containing public notices upon the doors of churches, not in the blank parts only, but on the *most ornamental parts* of these doors, whereby many beautiful designs are completely marred. The fine south entrance to Great St. Helen's, Bishopsgate, has lately been treated most ignominiously. The carved panelling in the semicircular part of the door, which is, indeed, worthy of inspection, is now entirely hidden by the churchwardens' board. The same thing has been lately done to an iron-gate to St Paul's Churchyard, Covent-garden.——I congratulate you upon the improved form of the "mod-rateur lamp." The strictures which, from time to time, you have made upon the original lamp from France, would appear to have made impression in the right quarters.—A. W. H.

Devon Society of Architects and Engineers.—A society, established through the instrumentality of a few architects and engineers at the early part of last year, but now numbering upwards of twenty members, called the "Devon and Cornwall Society of Architects and Engineers," held its ordinary monthly meeting on the 11th inst. the president, Mr. A. H. Bampton, M.I.C.E. in the chair. A communication from Mr. Brunel, on the objects of the society, was read. The following extract from the minutes of the previous meeting, which was held at Exeter, in June, will give some insight into the proceedings and objects of the society:—"The members present, ably guided by Mr. Hayward, visited the cathedral. A general feeling of regret was expressed at the want of sentiment shown in the restorations and alterations now being carried on; a remarkable instance being presented in the window of the nave by the north porch, which, in want of energy and general effect, exhibited a marked contrast with an old one of a similar pattern closely adjoining. Many internal fittings, especially the seating of the Morning Chapel, betrayed also the hand of the carpenter rather than of the architect, and much regret was expressed that so noble an edifice should so suffer from want of proper professional restoration." The subjects of various papers for preparation by members were suggested; as, for instance, the probabilities of wrought superseding the use of cast-iron for general purposes; the causes of failure in tubular drainage; any method of preventing damp, so frequent in walls in this locality, &c.

Re-opening of the Tumulus on Uley Bury.—This tumulus, after a lapse of thirty-four years, has been re-opened by permission of Colonel Kingscote. It was first opened by the Rev. W. Lloyd Baker, of Uley, father of Mr. T. B. Ll. Baker, of Hardwick Court. Among those who were at the re-opening, were the Rev. John Earle, professor of Anglo-Saxon in the University of Oxford; Mr. T. B. Ll. Baker, and family; and the Rev. S. Lysons, nephew of the antiquary. Mr. J. Freeman, who was also present, delivered a short speech, in which he expressed his persuasion of its very high antiquity, stating that it was no doubt far anterior to the Roman invasion, and belonged to what antiquarians designated the stone period. Dr. Thurnham laid before the meeting a ground plan of the building. He gave the dimensions as follows:—the whole length 22 feet, height 5 feet. There are two chambers in a straight line from the entrance, and also two smaller ones on the left. It is supposed there were formerly two corresponding small chambers on the right, thus giving to the erection the form of a double cross. Over the entrance was placed a very large stone (a correspondent of the *Gloucestershire Chronicle*, thinks this stone weighed six tons). Dr. Thurnham believed that the whole had been many times opened by several races, for the purpose of depositing their dead. In this way it had been divested of some of its architectural features. It was evidently built when edge-tools were not in use. It could not be less ancient, he maintained, than 700 or 1,000 years before Christ.

Great Extension of the Liverpool Docks.—An important report has been presented to the Dock Committee of Liverpool by the sub-committee appointed to consider the arrangements for dock extension and improvement. It has reference to an extensive scheme for the construction of new docks on land at the north end, proposed to be purchased from the Earl of Derby, Mr. John Shaw Leigh, and others; the improvement of some of the existing docks, the erection of additional warehouses, purchase of land, &c.; the whole to cost 3,416,686*l.*, composed as follows:—New docks, improvements, works, &c. 1,561,527*l.*; Harrington dock estate, 200,000*l.*; warehouses, 952,459*l.*; land, 702,700*l.* The price asked for the Earl of Derby's land was 105,000*l.* but has been reduced to 90,000*l.* or about 8*s.* a yard. The purchase is proposed to extend over a period of eleven years, at the rate of 300,000*l.* a year, and next session application to be made to Parliament for powers to carry out the scheme. The report was to be considered at the ensuing meeting of the Dock Committee.

Cyclorama of Naples and Pompeii.—These new dioramic views are now rendered more interesting by the manner in which the eruption of Vesuvius, A.D. 79, is exhibited: the view of the excavated city of Pompeii conveys an exact idea of its present state.

The Tottenham Sewage.—A pipe sewer is made through Tottenham to take the sewage to the river Lea. It acts to perfection, as both eyes and nose will prove; yet water is supplied from that source by the East London Company. There is a sewer made as far as Ponders' End, Enfield, to empty the drainage in the low water of the Lea, and a cut made to supply the company's works from the high water, which is more pure. The drainage of the towns lower down go into the said high water, which ought to be altered directly.—Inhab.

The Wolverhampton Baths.—These baths were sold by auction on Wednesday in last week. The property cost the original shareholders about 4,000*l.* and included, besides the building, 1,350 square yards of land adjoining. The final bidder was Mr. Thomas Walker, the town clerk, who purchased the property for 1,700*l.* Since they have been closed, it is said, the want of them has been severely felt. There seems, however, to have been no bath applicable to the requirements of the working classes, open at a low price, namely, a penny or twopence each time of bathing, whereby a considerable income might have been realized.

Deodorizing Water in Sinks and Closets.—Mr. Horace Dobell has, from purely sanitary motives, and to prevent appropriation by patent-eaters, published a suggestion of his own, whereby chlorinated water may always be supplied to the refuse and sewage of houses, by simply enclosing a small quantity of chloride of lime in a perforated box, in such a position as to impregnate the water with the deodorizing chlorine of the chloride, and which may be done, as he states, at the cost of one shilling. Were such a practice to become general, the benefit would be municipal as well as individual, and large quantities of sewage matter would be much more completely deodorized in this way than by deodorizers applied in the mass.

Restoration of Ilkeston Church.—A historical sketch of this church, with an appeal in favour of its restoration and enlargement, has been published in form of a tract; from which it appears that the works proposed by the plans already prepared by the architect appointed by the building committee and the Duke of Rutland, namely Mr. T. L. Walker, of Leicester, will cost, in round numbers, 3,000*l.* two-thirds of which have been realised, including 500*l.* contributed by the working classes of Ilkeston; and the committee now appeal to all in the county, as well as in the town itself, who take an interest in church architecture, for help towards completing the requisite sum.

Glass Shop-fronts.—Dr. Lloyd, of Birmingham, has patented some flint-glass pillars, or sash-bars, for shop-fronts, which have a novel appearance. The price varies from 7*s.* per foot up to 21*s.* These flint-glass sash-bars are also applicable for other purposes.

A Mountain of Mineral Paint.—Spanish brown, almost in inexhaustible abundance, is said to have been discovered near Elytown, Alabama.

ADVERTISEMENTS.

TO BUILDERS AND OTHERS.

A DESIRABLE PLOT of FREEHOLD GROUND (land-tax redeemed) TO BE LET on lease for the term of ninety years, situate in the Upton-road, West Ham, Essex.—For particulars, apply to Mr. T. J. GAGEN, Surveyor, Coborn-street, Bow-road.

TO CARPENTERS, BUILDERS, AND OTHERS.

DESIRABLE BUSINESS PREMISES TO BE LET on lease, with immediate possession, consisting of large workshops, cellar, shed, yard, and stable, with dwelling-house adjoining, containing nine rooms and other conveniences, situate in a populous neighbourhood and good thoroughfare, where the business of a carpenter and builder has been carried on for many years.—For particulars and cards to view, apply to SINCLAIR and SON, House and Estate Agents, 4, Finsbury-terrace, City-road, and 14, Southgate-terrace, Southgate-road, De Beauvoir Town.

UPPER TOOTING, near Wandsworth and Clapham Commons, six miles only from the Royal Exchange. TO BE LET, on Building Leases, an exceedingly eligible FREEHOLD ESTATE, of about Eight Acres, suitable for the erection of detached or semi-detached villa residences. The neighbourhood is highly respectable, healthy, and conveniently accessible. A site has been appropriated on the estate for a new church, which is now in course of erection.—For particulars, apply to Mr. LAMBERT, Surveyor, 4, New Basinghall-street.

VICTORIA DOCKS.—PLOTS of FREEHOLD BUILDING GROUND, for two or more fourth-rate houses, at 26s. per foot frontage, on the estate directly facing the Abbey Arms Inn, Bark-ne-road.—For particulars apply to the owner, Mr SCALES, 395, Shoreditch.

BUILDING LAND TO BE SOLD, or LET, on long building lease, in plots, at Ealing, Putney, Woodgreen, near Hornsey, Ware-road, Hertford, Brockley-hill, near Forest-hill, Round-hill-park, Brighton, Enfield, and Castle-hill, Reading.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

LANDING WHARF and DRAWING DOCK, LETT'S WHARF, near Waterloo-bridge, Surrey side. — Every accommodation is offered at this extensive wharf for landing, shipping, drawing, and warehousing goods. English and foreign timber, iron, stone, bricks, sand, coals, &c. &c. 160 feet river frontage for floats of timber, large wapples, a thirty-ton crane for heavy goods, boilers, &c; also a ten-ton crane. Apply to ROUTLEDGE and SON, on the Wharf.

HOWARD-ROAD, ALBERT-TOWN, STOKE-NEWINGTON (five minutes' walk from Kingsland-gate).—A convenient HOUSE for a family, with office and large manufacturing premises in the rear, TO BE LET on very moderate terms.—For particulars inquire of Mr. HARVEY, on the premises.

HULLAH'S HALL, LONG-ACRE.—TO BE LET, a very eligible PLOT of BUILDING LAND in this locality, with double frontage. Apply to Mr. BARLOW, 11, Portman-street, Portman-square.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane, or to Mr. LONG, Red Lion-street, Richmond.

PARTNERSHIP in a VALUABLE PATENT.—An established firm is desirous to offer to any one possessed of a moderate capital, a SHARE in their business, either as ACTIVE or DORMANT PARTNER, to work a patent, promising results the most lucrative of any of the present day, and the only one in this country. A very large sum of money has already been expended in perfecting and erecting the machinery, which will very shortly set to work. None but principals or their solicitors will be treated with. For particulars apply to S. HAMILTON, Esq. Solicitor, 20, King's-road, Bedford-row.

PARTNERSHIP.—To ARCHITECTS and SURVEYORS.—A Gentleman, possessing capital and experience, wishes to UNITE with a well-established LONDON ARCHITECT.—Particulars to be addressed to A. B. care of Messrs. Ricketts and Co. 6, Cross-lane, St. Mary-at-Hill, City.

TO ARCHITECTS' ASSISTANTS.

WANTED, immediately, TEMPORARY ASSISTANCE in the OFFICE of a SURVEYOR, in the City; one competent to prepare finished and working drawings of the dwelling house class. The engagement would be for at least six weeks; but if the party proved efficient, it might be rendered permanent.—Address, A. B. stating age, terms, qualification, and where last engaged, care of Messrs. Cockshaw, Printers, Ludgate-hill.

WANTS a SITUATION, a steady practical staircase hand, of considerable experience. Address, by letter, M. C. Messrs. Abbott, Barton, and Co's, 11, Wellington-street North, Strand.

WANTED, by a respectable well-educated Youth, aged 16, a SITUATION in an engineer, architect, or builder's office. Is acquainted with drawing, and the most satisfactory references given as to character and respectability. Apply to J. S. 5, Beaumont-street, Mile end.

WANTED, by an experienced person, a RE-ENGAGEMENT as GENERAL FOREMAN, or SHOP FOREMAN, to a respectable builder, or to manage and superintend railway or other works. He is a fair draughtsman, and well versed in his business, age 35.—Address, J. J. 4, Vaughan-terrace, City-road.

WANTED, by a highly respectable Man, a SITUATION as FOREMAN of a Brickfield, or would take it by contract. Good references can be given.—Address, L. M. 3, Church-street, Manor place, Walworth.

TO PAINTERS, BUILDERS, AND CONTRACTORS.

WANTED, by an experienced Man, a SITUATION as GENERAL or WALKING FOREMAN, or to MANAGE a BUSINESS. Competent to measure, estimate, and keep books.—Address, free, A. O. D. 24, Great Warner-street, Clerkenwell.

TO ENGINEERS OF LOCAL BOARDS OF HEALTH.

WANTED, by the Advertiser, who has lately been similarly employed, an ENGAGEMENT to assist in the DESIGNING or CARRYING OUT of WATER or DRAINAGE WORKS. Address, SURVEYOR, No. 8, Manchester-street, King's cross.

TO PAINTERS, PLUMBERS, AND GLAZIERS.

WANTED, by a person who has been in business some years, a SITUATION where confidence and integrity may be relied upon, to keep a set of books, measure and square up work, &c. &c.—Address, A. B. 21, Hornsey-street, Walworth-road.

TO ARCHITECTS AND SURVEYORS' ASSISTANTS.

WANTED, by an Architect in the suburbs of London, an ASSISTANT for a few weeks: office hours, Nine till Six.—Address, R. Q. P. 3, Kent-place, Kennington, stating age, salary required, where last engaged, and qualifications.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION by a BUILDERS' ACCOUNTANT and BOOKKEEPER of experience in prime cost and the trade's charges. Town or country. No objection to temporary employment.—Address, X. Z. Mr. Henry Carpenter's, Carpenter and Undertaker, New-street, Batter-sea-fields, Surrey.

WANTED, EMPLOYMENT from SIX till NINE or TEN o'clock in the evening, by a young man who is engaged in an architect and surveyor's office during the day. Any moderate remuneration would be required.—Address, A. W. care of Messrs. Pollard, 23, Moorgate-street, City.

WANTED, a SITUATION, by a Young Man, aged 21, who is thoroughly conversant with the duties of a builder's shop, is capable of measuring up works, and is a tolerable draughtsman. Amount of salary a secondary consideration.—Please address to A. S Office of "The Builder."

TO SURVEYORS, BUILDERS, &c.

VALUABLE and PROMPT ASSISTANCE, upon moderate terms, is OFFERED by a proficient PRACTICAL PERSON to BUILDERS, &c. whose accounts are in arrear (or otherwise), and who may require plans or estimates prepared, works measured, quantities taken out, or any other office business transacted. Apply to A. B No 24, Cross-street, Islington.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

THE Advertiser, having been for many years in the constant habit of putting up staircases and handrails of every description for his trade, takes the liberty of soliciting your favours in this department, and will undertake on the most reasonable terms the work in the best manner and on the lowest terms. Patent veneered handrails without joints. Estimates given. W. STARR, No. 88, Dean-street, Soho, London.

TO BUILDERS AND CONTRACTORS.

THE Advertiser requires a RE-ENGAGEMENT as GENERAL or MANAGING CLERK.—Address to C. B. 32, Bemerton-street, Great Northern Terminus, King's-cross.

TO ARCHITECTS AND BUILDERS.

THE Father of a healthy, industrious, and arduous Young Man, just out of his apprenticeship, and who has worked nearly four years at the bench, and the rest of his time in the architect's office of one of the first and most extensive firms in London, wishes to PLACE him under the principal of an old-established firm, who may require assistance or relaxation from the laborious part of his business, and where there is a prospect, when of mature age, of a junior partnership, and when 10,000*l.* or 15,000*l.* will be advanced, if required.—Address, post paid, to GEORGE BENTINCK LEFROY, Esq. 217, Piccadilly.

TO DRAIN-PIPE, CLOSET-PAN MANUFACTURERS, and OTHERS connected with Building Materials.—WANTED, an AGENCY, or otherwise as agreed, by a party connected with the Building Trade, and having premises to show samples, and in one of the best situations in London.—Apply, with particulars, from manufacturers only, to H. H. 450, New Oxford-street.

TO ENGINEERS AND MANUFACTURING FIRMS.

CLERKSHIP WANTED.—An active and intelligent Man, aged 31, fully qualified to take the entire charge of the Counting-house, wishes for a permanent ENGAGEMENT in town or country. His last situation, which he filled for upwards of eight years, was that of a bookkeeper and collector to an eminent engineering firm in town. This will be found a desirable opportunity for any parties requiring the services of a trustworthy, and confidential man. References of the first class.—Address to F. L. 18, College place, Camden-town.

AN experienced Builder's Foreman is open for a RE-ENGAGEMENT as general or shop foreman.—Address E. M. office of "The Builder."

A MODELLER, practical and general in the ornamental line, WANTS EMPLOYMENT.—Address, O. L. 5, Gower-street North. Best references given.

MESSRS. RODGERS and STYRING, of SHEFFIELD, beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the DECORATIVE PAINTING OF CHURCHES, MANSIONS, CLUBS, PUBLIC BUILDINGS, &c in the most correct style of Art, from designs, and under the direction of H. TAYLOR BULMER, Esq. of 38, Pall-mall, London, and Sheffield, whose works may be seen at St. Barnabas Church, Pimlico; St. Mary's, Farm-street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; the Council Hall, and numerous others in town and country; also the Decorations executed by him in the English, French, and German Mediæval Courts, Crystal Palace, Sydenham.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,.....}

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are is id with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and CO., and by the Company's Grinding Agents, in London, Messrs CHARLES DEVAUX and CO Wholesale Agents, 62, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road and 80 Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO, of 49, Norfolk-street, Liverpool who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO Timber-bnsl. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with the high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the improvements of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the leathery of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK'S—LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks, London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 10s and 21s. each, casks extrinsic.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 5d. each

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon, ordinary colours; Mineral chocolate brown, 8s. Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 8s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 1s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT, (Langston Scott's Patent.)
CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is but very little more than half the cost of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 16, Lombard-street, London.

HAGAN and CO.'S NEW PATENT LIQUID COLOUR is particularly suited for noblemen's mansions, outside of stucco fronts, also for halls, kitchens, bedrooms, areas, hospitals, school-rooms, railway stations, and all other private and public buildings, as a perfect substitute for oil-paint; is without any smell, and dries in one hour. May be applied over wood, on-paint, or any other surface, to any tone or tint of colour, or various shades of granite stones; it gives a mellow tone and richness of colour, presenting the appearance of flatted oil-paint, at less than one-half the cost of oil-paint.—It is prepared and manufactured by HAGAN and CO 323, Regent-street. Experienced men sent to superintend the work; and estimates given for public buildings.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.
PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rodney's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Fact street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to the Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days —CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no drowning.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster: and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties: that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Lathe, Blushes, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shelf time for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pencil-terr, Paddington-basin, where pieces and designs can be seen at all times. Examples of Terra-cotta, by J M blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby large and more even surfaces can be produced, and a higher degree of vitrification attained.

ENCAUSTIC TILE PAVEMENTS, MAW and CO. BENTHALL WORKS, BROSELEY, Salop, manufacturers of the Cloister Pavement of Mediæval Court, and
THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM,
in the beautiful ENCAUSTIC TILE PAVEMENT of CLOISTERS of BYZANTINE COURT, Crystal Palace. M. D. Wyatt, Esq. in Official "Hand Book"), forward with out charge, designs and estimates adapted to any given dimensions of Entrance-halls, Conservatories, Verandahs, &c. in every style.
Specimens at 11, Aldersgate-street, London.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Alhambra Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Curbs for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Dances, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-waisted Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton.

N.B. Lucky-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO BUILDERS, CONTRACTORS, AND OTHERS
MR. BENJAMIN GOUGH, in returning thanks for the liberal patronage with which he has been favoured during more than twenty-one years in the brick and stone trade, begs to announce that he has disposed of his business to Messrs. MILLS and PRICE and strongly recommends those gentlemen as his successors, to the continued support of the building trade in general.—37, Newington crescent, Newington-butts, August 1, 1854.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAGSTONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address, Mr WM WEBB, Brick-fields, Stoke Newington.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 2, Portland-street, Regent-street. Illustrated list of prices or samples forwarded on application.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 38s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Bullers, Engineers, Gas Companies, and others supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Cow-clipping perforated Tiles, real Dutch Clinkers, River Sand, Coarse Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

TO BE LET or SOLD, a BRICKFIELD, now in full work, well situated, within a few miles of London. Lease, 99 years.—For particulars apply by letter to HUNT and CO. Printers, High-street, Borough.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERED STONE. Estimates given for large or small quantities. Builders and Publicans supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50 130, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfied with the Filtered Water in quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half yearly report of the Directors of the Midland Railway, February 14, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way is that the contractors are bound to reduce their charges 5d per rail per annum, whenever the Fish Joint, or certain other improvements, are here after introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or to Mr. WILLIAM HOWDEN, the Secretary, 26, Great George street, Westminster.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 24, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT CHEAPER than any other house in the trade Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

FOR SALE, about 3,000 SCAFFOLD POLES (from 28 to 45 feet in length), and 6,000 PUTLOGS. The above are to be disposed of at a low price. Lying at LETTS'S Wharf, Commercial-road, Lambeth. Apply to Mr. JONES

BATH.—A full-sized COPPER BATH for SALE, in framed wood case, and mahogany top and lid. Large brass levers, taps, stop cocks, &c. all complete, ready for immediate erection.—Apply, 11, Portman-street, Portman-square.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 3 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being translucent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—

These Shades, manufactured exclusively by RICE HARRIS and SON, Jetmoor Glass Works, Birmingham, on an entirely new principle, effectually destroy the offensive and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and others where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas, of the latest designs constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass now manufactured at WHOLESALE PRICES.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

LICENSES GRANTED

FOR THE USE OF

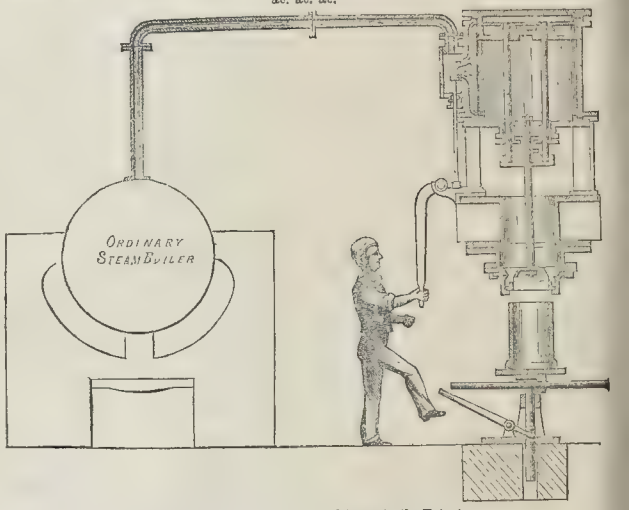
SPENCER'S PATENT;

VIZ. FOR

DIRECT-ACTION STEAM-PRESS, SOCKETING DIES,

These Dies are used without crosses or arms);

DIES FOR HOLLOW EARTHENWARE,



(As Garden-pots, Pans, Basins, Crucibles, &c.);

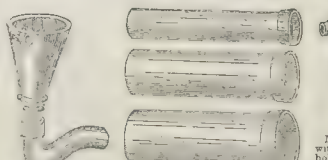
Bends direct from the Machine, Stilts and Kiln for Vitrifying and Burning;

FOR MAKING

SANITARY TUBES, DRAIN-PIPES, EARTHENWARE,

&c. &c. &c.

Apply for further information and terms to the Patentee,



THOMAS SPENCER, PRESCOT.

N.B. Licenses are already granted to parties in London, York, Leeds, Sheffield, Newcastle, Darlington, Birmingham, Liverpool, Wrexham, Edinburgh, Glasgow, and Aberdeen, or their localities.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, strength, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimation superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs GLADDISH'S LIME WHARFS, Pellatt-grove, Westminster-bridge; City-road Wharf, City Basin; Peckham, Bermondsey, Dancer's Wharf, foot of Battersea-bridge, Chelsea, Pratt Wharf, King's-road, Camden New Town; T. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 39, Brydges-street, Covent Garden; and at EDWARD COCKS, 24, Warwick-street, Oxford-street

Drawings and List of Prices will be forwarded free, on application.

THE SUPERIORITY OF JENNINGS'S CLOSETS ARE NOW GENERALLY ACKNOWLEDGED.

THEY ARE TO BE FOUND IN NEARLY EVERY HOSPITAL, ASYLUM, AND UNION THROUGHOUT THE UNITED KINGDOM.

They are IMPERISHABLE in their material, free from all complication, save the Lead trap, displace no impure air, are as easily understood and fixed as a Cock to a sink. Are cleaner and more efficient than any closet before the public.

As a proof of the latter only one fact will suffice. Nearly three years ago THIRTY-SIX of these Closets were fixed in GUY'S HOSPITAL, since then TWENTY more have been introduced, and their action has been so satisfactory, that H. CURRY, Esq. the Architect to ST. THOMAS'S HOSPITAL, has just introduced them throughout that building, as also JENNINGS'S LAVATORIES, URINALS &c.

THE ROYAL APARTMENTS OF THE CRYSTAL PALACE ARE FITTED WITH THESE CLOSETS,

And Architects will find on inspection that they are fit for the MANSION or COTTAGE.

To prevent Cholera and Fever, all Drains should be properly trapped.

JENNINGS'S TRAPS

Will be found to work without stopping up, and the removal of the grating does not affect the principle of the Trap.

JENNINGS'S PATENT SHOP-SHUTTER SHOES SHOE AND SECURE SHOP SHUTTERS AT HALF THE COST OF THE TROUBLESOME AND DESTRUCTIVE SHUTTER-BAR.

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

J. TYLOR AND SONS'

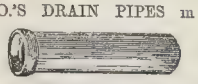
PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON.

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.



No 1.—J. TYLOR AND SONS' PATENT HIGH PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal hand e. 2l. 4s.
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 5l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 3l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

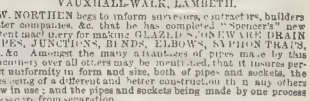
They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

MILL WALL POTTERY (near Scott Russell's).

—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application



TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connel's Registered Mode, Water closet"—This Water closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

J. TURNER, Pottery, 2, South Wharf,

Pmed-street, Paddington.

Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 34, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the fitting of a different and better construction than any others now in use; and the pipes and sockets being made by one process never separate from separation

W. N. invites particular attention to the superior quality of the glaze used in this manufacture, which is equal to glass, and renders leakage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's Park Basin.—J. C. Hilton's, Crown and Horse shoe Wharf, No. 6, Upper Thames-street.—C. Richardson's South Wharf, Paddington.—Smith's, Cambridge Heath Wharf, Hackney.—Nixon and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

SALES BY AUCTION.

ADVERTISEMENTS.

TO the Worshipful the MAGISTRATES of the COUNTY of MIDDLESEX.

MY LORDS AND GENTLEMEN,—Having been declared by your committee, on Monday last, a qualified candidate for the appointment of District Surveyor of Hammersmith, I beg most respectfully to solicit the honour of your support. It is my intention, should I be elected, to reside within the district, and to devote myself to the faithful discharge of the duties which the appointment so honourable confers upon the Metropolitan Building Act.

I have the honour to be, my Lords and Gentlemen, Your most obedient servant,

JAMES THOMSON.

57, Devonshire-street, Portland-place.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The THIRD of a COURSE of LECTURES, chiefly intended for the benefit of Art-Workmen, will be delivered at the ROOMS of the Museum, on MONDAY, AUGUST 21st, at 8 o'clock, on "On Progressive Changes in Ornament in the successive Styles of Mediæval Architecture," by GEORGE GILBERT SCOTT, Esq. Architect.

Door of admission, SEVEN o'clock. The Chair to be taken at EIGHT o'clock.

Cards for the whole Course of Lectures will be presented to Art Workmen and others on application to the Curator on any day except Saturday, between Ten and Four

HENRY CLUTTON, Hon Sec.

COMPETITIONS.

PARTIES who wish to TENDER for the ERECTION of a MANSION-HOUSE at LILLESDEN, Hawkhurst, are requested to apply to the Architect, WM. FRED GIBSON, 5, South-parade, Leeds, Yorkshire, who will forward particulars as to the time when the plans will be on view. They will be for inspection at Elden Hill, near Hawkhurst, which is 45 miles from Eredgate Station.

TO BUILDERS.

TENDERS are required for the ERECTION of FOUR DETACHED VILLA RESIDENCES at Walsham-road, Plaistow, Essex. Plans, &c. may be seen at the Offices of Mr. W. WILLIAMS, Architect and Surveyor, No. 75, Gloucester-street, City, on and after the 22nd AUGUST, between the hours of TEN and FIVE o'clock. Mr. W. E. WILLIAMS does not bind himself to accept the lowest or any of the Tenders.

TO LIME BURNERS, TAR DISTILLERS, AND OTHERS.

THE DIRECTORS of the CHARTERED GAS COMPANY are desirous of receiving TENDERS for the PURCHASE of the BREEZE, to be removed from their Westminster Station, also of TAR, to be taken from their several stations, viz. Horseferry-road, Westminster, Brick-lane, Old-street, and Curtain-road, Shoreditch, during a period of twelve months. Quantity of Breeze, between 3000 and 4000 chaldrons, as per Contract. Quantity of Tar about seven millions at per station. Parties to be made known to each Tender to be sent in addressed to the SECRETARY, THURSDAY, the 24th instant, addressed to the Secretary, Horseferry-road, Westminster, and endorsed, "Tender for Breeze" or "Tar," as the case may be.

32nd August, 1854.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a PAIR of HOUSES at Eltham, Kent, seen by application at the office of Mr. T. CHESTER HAWORTH, Surveyor, Eltham, Kent, on and after the 21st instant. Tenders for the proposed Works to be forwarded to Mr. T. CHESTER HAWORTH, on or before the 28th instant. The lowest Tender will not necessarily be accepted.

TO BUILDERS.

NEW BANK at BRISTOL.—Parties desirous of undertaking the ERECTION of a NEW BANK are invited to CONTRACT for the whole or any of the Works required in the ERECTION of a new building for the West of England and South Wales District Bank, and are invited to forward their tenders, accompanied by detailed prices of the specification and also of the quantities (taken by Mr. J. WILLIAMS, Surveyor, of London), within sealed cases addressed to the Directors, not later than the 31st instant, at which time they will be opened in the presence of those from whom Tenders may have been received.

CONTRACTS.

CONTRACT for CAST-IRON PIPES.—The Local Board of Health for the Borough of Preston are required to receive PROPOSALS from parties willing to CONTRACT for about 2,000 TONS of CAST-IRON PIPES, of which a portion are 30 inches in diameter. The conditions and form of Tender may be seen at the Office of the Engineer on and after MONDAY, the 21st inst. and parties reading at a distance desiring the purpose may be supplied with a copy of the specification and form of Tender up on payment of 1s. Tenders must be delivered by the 7th of SEPTEMBER, 1854.—Further information that may be required may be obtained from the Engineer.

HENRY WRIGG,
Engineer to the Preston Board of Health.

Preston, 15th August, 1854.

THEATRE ROYAL, DRURY-LANE.—TO BUILDERS and OTHERS.—Parties desirous of TENDERING for the EXECUTION of CARPENTRY WORK to be done to increase the depth of the stage &c. can see the specification and drawings by applying to Mr. T. N. NELSON, Architect, 33, Regent-street.

TO CONTRACTORS, BUILDERS, AND OTHERS.

THE CORPORATION of NEWCASTLE-UPON-TYNE will be prepared, on or before the 30th instant, to receive TENDERS for the several WORKS required to be done in the ERECTION of the NEW TOWN HALL, MUSIC-HALL, and PUBLIC OFFICES, in the Sandhill, Newcastle. The drawings and specification may be seen at the Office of the Architects, Messrs. JOHNSTONE and KNOWLES, 17, Clayton-street West, Newcastle, on and after MONDAY, the 14th instant, where bills of quantities may be obtained. Tenders to be sent in, under cover, to the Town Clerk's Office, endorsed "Tender for Public Building, St. Nicholas square." By order of the Building Committee.

August 10th, 1854.

CHATHAM LOCAL BOARD of HEALTH.—DRAINAGE WORKS.—TO CONTRACTORS AND BUILDERS.—The Local Board of Health for the district of Chatham extra hereby give Notice, that they are ready to receive TENDERS for CONSTRUCTING the OUTLET WORKS, PENTSTOCK, and TIDE FLAPS, and also a MAIN BRICK SEWER, to commence at Holborn-wharf, continuing under and across Watts'-place, Gibraltar Military-road, and along the course of the Middle Dyke for a length of 1,958 feet or thereabouts, with side entrances, gullies, air shafts, and other works connected therewith.

The contract drawings, specification, and general conditions, may be examined on and after MONDAY, the 21st INST. and printed bills of quantities with form of Tender, may be had upon payment of 5s. per copy, with any further information, at the Office of the Local Board, 311, High-street, Chatham, or at the office of Mr. EDWARD GOTTO, C.E. 45a, Great George-street, Westminster.

Tenders to be delivered at the Office of the said Local Board, Chatham, by or before ELEVEN o'clock on FRIDAY, the 1st of SEPTEMBER next, addressed to the Local Board of Health, and endorsed "Tender for Contract No. 1."

N.B. The Local Board do not bind themselves to accept the lowest or any Tender.—By order of the Local Board,

THOMAS HILLS, Clerk.

Chatham, 17th August, 1854.

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Ladles, and Steam-engines; Range and Hot-plate Metal. An improved Boot Door, adapted for interior use.

A large stock of Rain-water Pipes, Plain and OG Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Fresh Gates, Staircases, Wrought-iron Girders, Fireproof Doors, Book Safes, and Strong Rooms,

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 3 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot super.	
No. 12	"	"	20	oz. do. do.
No. 13	"	"	23	oz. do. do.
No. 14	"	"	26	oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 16 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London.

PROTECTION FROM LIGHTNING.

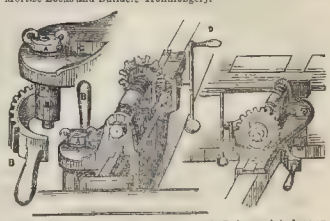
The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.



ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE,

WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
D. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a novel cramp of the best kind, and as well suits for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES

CHUBBS' PATENT DETECTOR LOCKS

give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all a size, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.

CHUBBS' PATENT LATCH, for front doors, counting house doors, &c is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.

CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHESTS, &c made entirely of strong wrought-iron, so as effectually to resist the falling of brickwork, timber, &c in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.

CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.

CHUBB and SON, 57, St. Paul's Churchyard, London.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Founder's Nails, wrought and cast), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the Lowest prices.

1a, Stanhope street, Clare-market, London

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought iron rolled in one piece, and constructed to receive a flat floor; it becomes to other a beam of artificial stone when hardened; the arch structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, being superior to the necessity for employing timber and brick arches, and is free from the great inconvenience of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, when the cost is no more.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

ROPEMAKERS, IRONMONGERS, PAINTERS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

WIRE STRAND FENCING,

as furnished with all its fittings, by H. S. NEWALL and Co. having effected the most perfect practical union of simplicity, economy, and durability, is confidently recommended as the most effective, and cheapest form of fencing for parks, farms, gardens, and plantations, for fencing round arable, pasture, or meadow lands, for rabbit warrens, and for all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by H. S. Newall and Co. under the patent, is formed of wire rod and rail in the Staples and Rail principle, at Wood or Iron posts, and presents a row of round rails, equally tight and rigid, and as durable as if they were part of the post.

N.B. Estimates given at so much per running yard, for fencing, &c. complete with posts, staples, or any other particulars, will be forwarded on application.

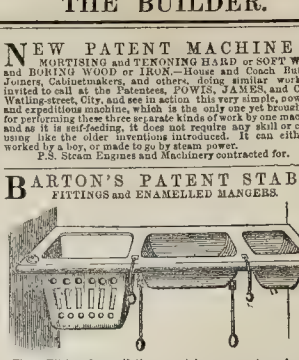
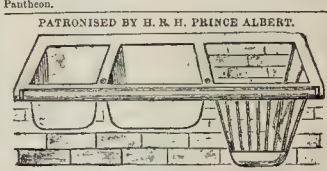
THOMAS EDINGTON, late of the Phœnix Iron Works, Glasgow, Iron Merchant, Contractor, Inspector of Railway Bars and Castings, Agent for Patents, General Commission Agent.—WANTED, AGENCIES for the Sale on Commission of English Boiler and Ship Plates, Angle and Kiret Iron, Tinned Plates, &c.—17, GORDON-STREET, GLASGOW.



COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

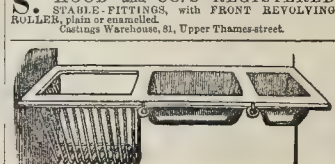
GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London. Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas-works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general, IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.



These Fittings have all the newest improvements, and are the only Patented invention of this description to be had, Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in Stock. Iron Hurdles, Gates, Fencing, &c.—JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

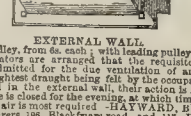
PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. Castings Warehouse, 81, Upper Thames-street.

COTTAM'S ENAMELLED MANGERS.—Those Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show. COTTAM & HAILEN, 2, Winsley-street, Oxford-street, London.

KIMBERLEY'S Patent Mortising Machine, 12l. each.
Kimberley's Patent Flooring Cramps, 20s. and 28s. each.
Kimberley's Patent Window Stays and Door Springs.
Kimberley's Patent Gas Stoves, Ovens, and Ranges.
Kimberley's Registered Fancy Burns, and Shakspearian Brass Foundry.
Thousands of all are now in daily use.
These well-estabished Articles to be had from ROBINSON, LANGTON, and CO. 7, Talbot-court, Gracechurch-street, London; or from the Patentee, Birmingham, or to be seen at, &c.

Books of testimonials and references to any extent throughout the United Kingdom can be given.



ARTESIAN WELLS.—Boring for Water, Sinking Shafts, &c.—The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

STEAM-ENGINE and BOILER.—TO BE SOLD, a Ten-horse Power High-pressure STEAM-ENGINE and BOILER, both quite new, constructed for the purpose of being worked in the country where they now are, but not now required for that purpose.—Inquire of Messrs. BUNNETT and CO. Engineers, New-cross-road, Deptford.

CHEAP PEWTERING, GAS-FITTING, and BELL-HANGING. Improved Moulded Counter-engines, 63s. per pull; Private Residences fitted with Gas, Four Lights complete, 6os.; Bells hung in Secret, with best Porcelain Levers, 8s. per pull. BARRAT'S, Pewterer, Beer-engine Manufacturer, and Gas-Fitter, 12, Spa-road, Bermondsey.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 186, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
CASE-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS, with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

IMPROVED CONSTRUCTION, to cure and avoid Smoky Chimneys, Unsightly Cowls, &c. Cast Iron Chimney Contractor, Register, and Chimney Bar, all in one, made for Flues 14 by 9 and 9 by 9. Also, Cast Iron Mouth-pieces for the horizontal escape of the smoke.

To be had of the Manufacturers, Messrs. PARRY and SON, Atlas Foundry, 105, Golden lane, St. Luke's.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Lathe, and Fire Goods.—WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

THE MARBLE WHARF, Thames Bank, Pimlico, adjoining Vauxhall-bridge.—THOMPSON and HOLMES, Marble, Wood, and Stone Brokers and Contractors, and Builders' Agents. Every description of English, Italian, Belgian, and other Marbles. Temporary Office, 9, Crescent-terrace, Milbank.—General Landing Wharf.

TO SCULPTORS, MASONS, AND BUILDERS.

MESSRS. BRINE (BROTHERS), beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SON, of Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary, Vein, and Sicilian, will arrive next month. They already have 100 blocks of Vein and Sicilian to select from, at their extensive depôt, Great Northern Wharf, Canal-road, King's-cross, where may also be found marble slab of various descriptions, sawn by their powerful machinery. H. W. WILKINS, Manager.

"	.....	Third Class, 1s. 6d.

In order to afford every facility to the public, and to prevent any delay at London Bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.

Fares between London Bridge and the Crystal Palace Station, not including admission to the Palace:

Single Tickets	.....	First Class, 1s. 3d.
"	.....	Second Class, 1s. 0d.
"	.....	Third Class, 0s. 9d.
Return Tickets	.....	First Class, 2s. 0d.
"	.....	Second Class, 1s. 6d.
"	.....	Third Class, 1s. 0d.

The last-named tickets can be obtained at the London Terminus, and at the Company's Offices, 4, Regent-circus, Piccadilly.

Special first-class return tickets from London bridge to the Crystal Palace Station are'd back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d. each. These tickets can only be issued on production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class cars, but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London-bridge, or at the Crystal Palace Stations; re-seegers must therefore provide themselves with the necessary silver.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by railway, 2l. 2s. each; without conveyance by railway, 1l. 5s. (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

MUNDEN HAMMOND, Agent, No 27, Lombard-street.

ROYAL POLYTECHNIC INSTITUTION.

Under entirely new Management. Course of Monday Evening Lectures, specially addressed to the Industrial Classes, to which they and their families will be admitted on payment of Sixpence each, on producing a ticket signed by the Foreman or superintendent of the works to which they may belong. The Second Lecture of this Course will be delivered by J. H. Pepper Esq on Monday Evening, the 21st inst. at Eight o'clock, on the Chemistry of the Non-Metallic Elements. Great Scientific Novelties. Nature-Printing, by Dr Bachhoffner. Exhibition of the Modern Greek Fire, and of Dobrosen's Illuminated Cascade, in addition to all the Fixed Lectures, by Messrs. Pepper and Bachhoffner. Optical Exhibition, Photographic Portrait Gallery, &c. &c. &c. A Band of music under the direction of Mr. Wand, of the Royal Italian Opera. The Gas-lighting has been re-arranged by John Leslie, Esq. For Mr. Penny Hand-printing Apparatus explained daily, with many other inventions.

GUILD of LITERATURE and ART

incorporated by Act of Parliament, 17 Vict. cap. 51) to ENCOURAGE LIFE ASSURANCE, and other provident habits among authors and artists, to render such assurance to both as shall never compromise their independence; and effectively to found a new institution, where honourable rest from arduous labour shall still be associated with the discharge of congenial duties. The council is now ready to enrol members, and to receive subscriptions in conformity with the rules set forth in the printed exposition, of the objects and constitution of the Guild. Copies of this document, containing the Queen's charter, the rules and council, list of the subscribers; an abstract of the Act of Incorporation, the proposed bye-laws and tables of premiums for life assurance deferred annuities, &c. &c. can be obtained by application personally at the Chambers of the Guild, No. 10 Lancaster place, Strand; of Mr. Mitchell, 33 Old Bond-street; at the Athenæum; of Mr. George Simms, Bookseller, Manchester; of Messrs. Welsh and Hunt, Booksellers, Liverpool; Messrs. Simms and Son, Booksellers, Bath; Messrs. Fraser and Arrowsmith, Booksellers, Bristol; Messrs. Rogers and Fowler, Booksellers, Sheffield; Mr. Sang, Bookseller, Newcastle upon-Tyne; Mr. Bell, Bookseller, Birmingham; Mr J. Menzies, Book-seller, Edinburgh; Messrs. Murray and Son, Booksellers, Glasgow; Mr. M'Glashen, Bookseller, Dublin; and also by post on receipt at the Guild Chambers, of a stamped and addressed envelope. W HENRY WILLS, Secretary.

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS

HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to any Companies or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St Margaret and St John the Evangelist, St Anne, Soho, St Clement Danes, St. George, Hanover-square, St. James', St. Martin-in the Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to bear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties Printed Forms of Application, and all necessary information, may be obtained by applying (personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD R. STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in, one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

PARTNERSHIP or otherwise.—WANTED,

1,000l. to Cooperate to extend an established and profitable Manufacture of Agricultural Implements of unlimited demand.—Applications from principals only by letter, with reference entertained. Address, W. W. B 95, Hatton-garden.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL

MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
H B medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

NOTICE to INVENTORS.—New Patent

Law—PATENT OFFICE, 4, Trafalgar square, Charing-cross. The "Circular of Information," and plain instructions for the protection of inventions in the United Kingdom or foreign countries, may be had gratis, by applying personally, or by letter, prepaid, to Messrs. PRINCE and CO.

TO TIMBER-MERCHANTS, BUILDERS, PLASTERERS, &c.

MR. JOHN RICE, 79, Tithebarn-street,

Liverpool, has ON SALE at all times a quantity of PLASTERERS' HAIR of the best description, which he offers to the trade in general.—Price and terms on application.

SWISS DRAWING INSTRUMENTS,

equal in quality to the very best London-made instruments, and considerably cheaper—Apply to Mr S. BARLOW, 3, Charlestan, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Ex hange, Manchester.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous

of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in setting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.
Address, 8, Rathbone-place

MESSRS. RODGERS and STYRING, of

SHEFFIELD, beg to acquaint the Nobility, Clergy, Gentry, and Architects, that they have made arrangements for the
DECORATIVE PAINTING OF CHURCHES, MANSIONS, CLUBS, PUBLIC BUILDINGS, &c.
In the most correct style of Art, from Designs, and under the direction of R. TAYLOR BULMER, Esq. of 38, Fallowfield, London, and Sheffield, whose works may be seen at St Barnabas Church, Pimlico; St. Mary's, Farm-street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; the Council Hall, and numerous others in town and country; also the Decorations executed by him in the English French, and German Mediæval Courts, Crystal Palace, Sydenham

New Tale by the Author of "Mary Barton," to be published Weekly in "HOUSEHOLD WORDS."
On Wednesday, 26th of August, will be published, in "Household Words," the First Portion of a New Work of Fiction, called

NORTH AND SOUTH.

By the Author of "MARY BARTON."
The publication of this Story will be continued in "Household Words" from week to week, and completed in five months.
Office, 16, Wellington-street North, Strand; and sold by all Booksellers and Newsvendors.

TO MEMBERS OF FREEHOLD LAND SOCIETIES.

Just published, in one volume, with upwards of Forty Plates, price 5s.; by post Sixty-six Stamps,

DESIGNS, SKETCHES, PLANS, and

SPECIFICATIONS for SUBURBAN VILLAS and COTTAGES; with estimates of cost, from 150l. to 1,000l. per house, adapted for erection on the building estates of the various societies.
By GEORGE ALDEN RHODES, Architect and Surveyor;
Author of "Remarks on the Purchase of Landed Property," now ready
London: J. R. HALE, 6, Tavistock-row, Covent-garden; or by Post from the Author, Lincoln's-inn-fields-chambers.

IMPORTANT TO MEMBERS OF FREEHOLD LAND SOCIETIES.

Preparing for publication, and will shortly appear, Part I. of an entirely new and original work, entitled,

THE BUILDER'S PRACTICAL

DIRECTOR, containing buildings for all classes, enabling every freeholder to be his own surveyor and builder; with plans, sections, and elevations, for the erection of cottages, villas, farm buildings, dispensaries, public schools, &c. Also detailed estimates, quantities, prices, &c. Illustrated by numerous diagrams and steel engravings, by eminent architectural artists.
Edited by E. V. GARDNER, Esq. C.E. author of "Railway Mensuration," "Builder's Guides," &c. &c.
Assisted by J. GARDNER, Esq. and other eminent Architects and Surveyors.
The work will be published in parts, each containing four plates. To be completed in from twenty-five to thirty parts, at 1s. 6d. each.
Published for the proprietors by J. HAGGER (late W. French), 67, Paternoster-row, London.

The Builder.

SATURDAY, AUGUST 19, 1854.

THE spread of the modern plague renders necessary a renewal of our sanitary exhortations, and calls for earnest endeavours to lessen its power on the part of who have means and authority. We are not be considered as mere alarmists on the roach of danger. At a time when cholera ot we did not fail to point out again and in the existence of a condition of things ourable to its progress, and to ask for that vision against the enemy which science and erience have shown to be potent. Those o have the care of the lives of multitudes, who when the time of seeming safety had ne, discharged the officers of health, with view towards a paltry saving, and in e of all warning allowed matters to go on the old-established manner, have incurred at responsibility. It is true that certain es shown to be abominable and disgraceful e been improved, but it is also true that se remain unnoticed and unremedied.

holera has entered into a new and a more n ever appalling phase of its existence. In ner years it passed successively round the be, so that we had, as it were, but one or two gue-spots on the face of the earth at any time; but now it is a fearful fact that it sts at one and the same moment in every rter of the globe,—east, west, north, and th. The subject, therefore, is at present upying the anxious thoughts of men in every ie and country. With the risk of universal we have the dread of universal pestilence: a terrible time, whatever may be its issue; that this issue will be for good to the an race we do not for a moment doubt,—d, however, which is to be attained, it would ear, only through and beyond a terrible al. Full time it is that every town and in the nation, and every nation in the ld, were engaged, in thorough earnest, in adoption of those well-known means and sures whereby the virulence of this pest be neutralized, and whereby its very exist- might, under Providence, be rendered ossible. Amongst these preventive measures re is probably not one more important a the general adoption of means for constant purification of the air in ellings and in towns. This is a question which every one is interested, more espe- ly those of course who dwell in towns, most especially those who reside in near the poorer, closer, and more crowded icts; but scarcely less interested than se latter are those who dwell even in openest and otherwise least unhealthful es; for it is a law of nature that impure generated in one locality, immediately uses itself far and wide, palliating the mis- f certainly at its source, but only by diffusing t mischief elsewhere all around. Thus as . Hopley remarks, in a recently published ure on "Respiration,"—"Thousands of the don poor are daily saved because the poisons erated about their homes are rapidly spread ough the surrounding atmosphere; and ugh they thereby become diluted and are s rendered proportionally innocuous, yet that y do contribute to the contamination of the breathed by every member of the metropolis, n the Queen on her throne to the beggar in cellar, is a truth as indubitable as the best ublished fact in natural philosophy."*

Pure air is the vivifier of the blood; indeed, it is the perfecter or completer of the dissolved and chylified food into the form of blood. The vital air, moreover, is not only that which contributes life to the dead blood or chyle, but that which converts it into the fibrinous strength of the body. This fact is only now beginning to be seen by physiologists, but it is one essentially involved in the principle which we announced some years since in this journal, while noticing a work by Liebig on respiration and other vital and chemical functions of the living organism. We there intimated reasons for the belief that the precise nature of the energy or vigour contributed to the blood by the vital oxygen of the atmosphere was *concentrative*. It is under the influence of such an energy that every process of composition and consolidation, as well as every effort of physical strength or muscular contraction, takes place,—nay, that every concentrative effort of the brain is effected. Of truly vital importance, then, to the health and strength—to the life and spirit—of the community is the subject of respiration, and the question of the purification of the air of dwellings and towns.

True it is, that "to purify the atmosphere for a nation is to purify a nation's blood; and to purify a nation's blood is to improve the entire nation physically, intellectually, and morally."

In all places, both at home and abroad, which the cholera has visited, we find it governed by the same laws, destroying numbers in places ill drained, overcrowded, or in which human and vegetable decomposition is permitted to go on amongst the dwellings of the living. In 1849 and 1850, the cholera attacked most of the towns in the United States of America, and it is curious to note how closely the neighbourhoods visited resemble those attacked by it in London, and the large towns of England. In a report of the cholera in the United States in 1849, prepared by Dr. James Wynne, and printed in our parliamentary reports (Vol. 20, A.D. 1852, in the British Museum), Dr. Buel, one of the medical men attached to the New York dispensary, being called to attend some cases of cholera in No. 20, Orange-street, New York, thus describes the locality:—

"This place, so to speak, having been the birthplace and natal soil of cholera, is perhaps deserving a moment's notice. It will be found no matter of surprise that here cholera selected its first victims. A more befitting birthplace could hardly be found within the limits of this or any city.

No. 20, Orange-street, lies about thirty or forty yards in a south-easterly direction from the 'Five Points.' The entrance to the rear lot is gained by an opening scarcely 2 feet in width, or more than 6 feet in height, pierced through the front house; and, passing through this a distance of 40 feet, you reach the rear lot, on which are two old and ruinous tenements, one a prolongation backwards of the front house, the other standing across it at right angles. The adjoining houses are extended backwards in the same manner, thus cutting off almost completely all ventilation, or admission of fresh air. The small area left unbuilt upon is covered with black pools of filthy water.

The apartment, where the first cases occurred, is a basement or cellar, in one of these buildings, sunk entirely below the ground level. The room is about 10 feet or 12 feet square. The door had fallen from the hinges: the sashes of one or two small windows were destitute of glass. There was not in the room, bed, chair, or table, or a single movable, except two empty barrels: the door, removed from its hinges, and laid across these, formed the only substitute for a table. On my first visit, on the 16th May, 1849, five human beings,—one man and four women—lay upon the floor in different stages of cholera. There was nothing under them but mud and filth, and nothing over them but a few rags of the filthiest condition. It is not easy to conceive of human beings reduced to a more abject condition. Civilization and a great city could only offer a parallel to this scene. They were lower than the savages, because the latter would at least have the sky above them, and the pure air of heaven to breathe. They were actually lower than the brutes."

In this locality, in a circle of a few yards, the cholera continued without touching any other neighbourhood for fourteen days. The next place seized was about a mile distant. At the time of the first attack the weather was so cold that it was necessary to light fires for the comfort of the patients. The spring had been cold and wet. In June intensely hot weather set in, and then the disease spread throughout the city.

As is the case in London, there were in many of the sixteen districts of New York crowds of Irish and Germans. This city had also districts which agree with our Agar-town, Maiden-lane, and others: for instance, the sixteenth district or division, was less crowded than other parts; "but," says the report, "there were in operation local causes which sufficiently explain the mortality." There were numerous pigs and pools of stagnant water. "Horse-killing and bone-boiling establishments send forth their putrid miasmata: these, with glue, starch, and soap manufactories, produce a combination of villainous odours without parallel."

When the pestilence was sweeping with the besom of destruction over the neighbourhood, *and not till that time of alarm*, did the authorities of New York begin to inquire into and put a stop for a time to these nuisances; when they found in places piles of bones partly covered with flesh putrefying in stacks, and other noxious matters which we will not pain our readers by describing. In the excess of zeal and perhaps fear, these places, as we have already stated, were abruptly closed, and then no other provision having been made for the reception of dead animals, they were thrown here and there—some into the river, where horses, in different stages of decay might be seen moved about by the tide, and lodged in various places to the damage and death of many. Surely this ought to be a lesson to us not to wait, but rather, as we have before observed, to use the greatest exertions before the danger comes, and at a time when these efforts will be attended with benefit instead of evil.

In New York those portions of the city occupied by wide, airy, and well-drained streets, and inhabited by a population whose circumstances and habits of life, by reason of diet, ventilation, and cleanliness, are favourable to health, enjoyed almost a total exemption from the ravages of the pestilence.

The number of deaths in New York, in 1849, amounted to 5,071: of these, 2,219 were Irish, 1,627 natives, and the remainder from different countries.

Dr. Wynne alludes to the number of deaths in New York from cholera in 1832 compared with those in 1849. In the former year the deaths were about double the number of the latter, and the population had increased one-third. "But," says Dr. Wynne, "New York had in the interval between the former and the last epidemic *undergone a considerable change for the better*."

"The introduction of the Croton water likewise exerted a decidedly beneficial influence in all parts of the town, and contributed largely to the prevention of the rapid spread of the disease."

Our space will not allow us to enter into many

* Churchill, New Burlington-street. 1854. This fifty-seventh "tract" is intended to form the sixth of a series of plain and simple lectures on the education of man, written with a view to delivery in London, but now separately published as a timely contribution towards the sanitary exhortation addressed to the middle and upper classes, which the advent of the plague to our metropolis renders so advisable at the present moment.

particulars respecting the condition of other cities in the United States: many were, however, as ill off as New York. In East Boston, where whole streets are built on made-ground without means of carrying off the water, there were a number of fatal cases. In New Liverpool-street, a locality similar to Orange-street, New York, —in every instance, says the medical officer, as far as could be ascertained, the houses which were visited by the pestilence *were without proper drains*, while others in the *same locality* and in other ways similarly circumstanced, but well drained, escaped untouched. The cellars in Boston which are inhabited, are said to be numerous: some are used in front for the sale of goods, and the back parts are damp dungeons, without light, —places in which it is wonderful how the lamp of life, under such circumstances, continues to burn for even a day. "It is, perhaps," says the physician, "as great a wonder that such a state of things should in this community be suffered to exist."

Our object is not to alarm, but to encourage, by showing how dependent the disease is on conditions which we have the power to change.

In 1665, the year after the Great Plague, E. Coates, printer to the Company of Parish Clerks of London, published a series of tables showing the particulars of "London's dreadful visitation." In this valuable mass of statistics the bills of mortality beginning 27th December, 1664, and ending 19th December following, are given for each metropolitan parish. The worthy printer, in introducing his sheets to the "Courteous Reader," observes, "I presume that the candour of thy ingenuity is such, that thou wilt not rashly condemn me of imprudence in reprinting these sad sheets; first understanding the reasons moving me thereunto, and then I am somewhat confident thou wilt approve my design." The printer then at some length exhorts his readers to take benefit by the warning and experience they have, and says, "But I am a *printer*—no preacher; I shall therefore waive such discourse, and briefly yet perspicuously render faithful account why I undertake this publication."

"In the year 1625 the stroke of the Lord's hand was heavy upon this city and suburbs, which year was ever since called the *Great Plague*.* Now, though thou hast probably seen several printed general reports given by the parish clerks in that year, yet I am not able to recover all the particular weekly bills thereof: the sight of them hath been much desired these times, but it is beyond my power as yet to answer expectation. That posterity may not again have such loss, I resolved to communicate to the nation these subsequent leaves."

More exhortation follows, and the printer concludes by expressing a hope that "neither myself nor any other of my profession may have occasion for the future to print such dreadful lines." What he did is valuable.

Although it would not be without its use or interest to trace the progress of that great pestilence from parish to parish, and mark its increase and decline as shown in the Parish Clerks' report, we will briefly give a few particulars which are illustrative of our present views:—

The first death from plague mentioned in the report occurred in the parish of St. Giles-in-the-Fields, in the week beginning December 20th, and ending December 27th, 1664. The second death from plague occurred in the same parish in the week commencing February 7th, 1665. From April 18th to the 25th, two deaths from plague are reported in St. Giles-in-the-Fields' parish. All the other 129 London parishes are reported clear. From May 9th to the 16th, we find one death from plague in St. Giles's-in-the-Fields, and two in St. Clement's Danes.

It will be seen by the above statement, that the plague at three different times attacked the parish of St. Giles-in-the-Fields, and left the rest of London untouched. This circumstance is suggestive. It is the popular opinion that the disease was imported from abroad; but the fact that it broke out at intervals during a period of upwards of four months, goes far to prove that, like the cholera and typhus fever, the plague was influenced by local causes.

During the whole time of the visitation of the plague, this particular parish was not for a single week clear; and although the population at that time was small compared with that of other parishes, 3,216 persons perished there of the plague.

The number of deaths from plague in some of the other London parishes in 1664-65 was as follows:—

St. Clement's Danes	1,391
St. Giles's, Cripplegate	4,838
St. Botolph's, Aldgate	4,051
St. Andrew's, Holborn	3,958
St. Margaret's, Westminster	3,742
St. Mary's, Whitechapel	5,583
Stepney parish	6,583
St. Saviour's, Southwark	4,235

And so the population of the parishes was swept away by the pestilence—a scourge so great as to be but feebly understood even by the aid of these figures. Within the metropolitan bills of mortality, says the Parish Clerks' report, 68,596 persons perished; and at that time, it is almost needless to say, St. Pancras, Marylebone, Islington, Paddington, and other immense districts were not in existence.

A comparison of the present with the past is cheering. We see how enormously even the too slow progress of improvement has tended to the preservation of life. The ravages of the cholera in 1849 with an enormously increased population were small as compared with those of the plague in 1664. Nevertheless, it then carried off 14,000 persons in London, to say nothing of those who have fallen victims to this disorder in Newcastle, Edinburgh, Glasgow, and other parts of the kingdom.

It is a frightful thing to think of—but, nevertheless, a fact—that these deaths were caused mainly by our own ignorance and perverseness. We say this, however, not in complaint, but as a reason for acting differently now.

We learn from a valuable body of statistics deposited in the Guildhall Library, that of the 729 deaths by cholera within the precincts of the City, in 1849, 174 occurred in 77 houses; and 4 deaths by cholera took place in each of the following houses, viz. in No. 7, New-street, St. Andrew's-hill, Blackfriars; at No. 13, Seacoal-lane, Snow-hill; and at No. 8, St. Dunstan's-court, Fleet-street. Three hundred streets, courts, alleys, &c. were returned by the nine City registrars as having in each one or more deaths by cholera. Sixteen deaths by cholera occurred in Fleet-street, 9 on the north side and 7 on the south; 12 in Poppin's-court, Fleet-street; 11 in Farringdon-street, 10 on the west side and 1 on the east; 11 in Plumtree-court, Shoe-lane; 9 in Upper Thames-street; 8 in Shoe-lane; 8 in Ludgate-hill; 8 in Sevenstep-alley; 8 in Harp-alley; 8 in Half-moon-street; 8 in Whitefriars-street; 7 in Peahen-court; 7 in Fleet-lane; 6 in Seacoal-lane; 6 in New Bridge-street; 6 in Black Horse-court, Fleet-street, &c.

In the City without the walls, containing 8·2 inhabitants to each house, and 16·2 square yards to each person, there was one death from cholera in each 137 persons.

In the City within the walls, containing 6·6 inhabitants to each house, and 32·0 square yards to each person, there was one death from cholera in each 245 persons.

In the City liberties one in each 171 persons died of cholera.

In London, north of the river Thames, exclusive of the City, the deaths from cholera in 1849, were 6,263, in a population of 1,320,306, or one death from cholera in each 211 persons.

In London, south of the river Thames, the deaths from cholera were 7,133; the population 503,346, or one death in each 71 persons!

In London, within the bills of mortality, exclusive of the City, the deaths from cholera were 13,396, population 1,823,652, or one death in each 136 persons.

It will be seen that the comparative immunity of parts of London may be stated thus: 1st, the City within the walls; 2nd, London north of the Thames (exclusive of the City); 3rd, the City without the walls; 4th, London on the south of the Thames. In the latter division the fearful mortality of 1 in each 71 of the population took place: this was the natural consequence of its ill-drained state—the multitude of cesspools, open ditches, dilapidated dwellings, noisome trades, and those sure accompaniments, a large amount of abject and degraded population, who increase the evil by a manner of living for which the atmosphere they breathe forms too ready an excuse, and, in fact, is in many instances a leading cause.

The following table will explain itself:—

LOCALITY.	Deaths by Cholera.	Percent. of the Total.
In 91 narrow streets, lanes, alleys, &c. there were	239	33
„ 108 courts, yards, &c.	221	30
„ 45 open streets, docks, wharfs, &c.	113	16
„ 53 squares, buildings, places, gardens, rows, rents, &c.	99	14
„ East London Union House	33	5
„ West London ditto	14	2
„ St. Bartholomew's Hospital—Deaths by cholera of persons belonging to the City	110	15
„ Ditto, not belonging to the City	88	12

The registrar's returns for the last fortnight show with frightfully vivid distinctness, by the results, that the same causes are now in operation*!

Several deaths, as we have shown, took place in Fleet-street, yet few in comparison with those in Poppin's-court and other courts, if we take into consideration the difference of extent. The houses in Fleet-street are generally ill drained, and it must be noticed that, in many of the large printing establishments which abound here, both drainage and ventilation are neglected. In most instances the boilers of the steam printing-presses, and the presses themselves, are in the cellars: each room is usually thickly crowded with workmen, and on the staircases there are generally two or three offensive water-closets. In summer nights the blazing gaslights overheat the atmosphere, ventilation is neglected, and a state of things is produced, calculated to lower the standard of health and shorten life. This is a question which concerns us all vitally.

As the Registrar-General observes in his last report,—"The prolongation of the life of the people must become an essential part of family, municipal, and national policy. Although it is right and glorious to incur risk, and to sacrifice life, for public objects, it has always been felt that length of days is the measure, and that the completion by the people of the full term of natural existence is the groundwork of their felicity. For untimely death is a great evil. What is so bitter as the premature death of a wife, a child, a father? What dashes to the earth so many hopes, breaks so many sweet alliances, blasts so many auspicious enterprises, as the unnatural death? The poets, as faithful interpreters of our aspirations, have always sung that in the happier ages of the world this source of tears shall be dried up."

* This plague carried off 68,596 in London, besides upwards of 10,000 who died of other disorders.

* Out of 617 deaths from cholera in the metropolis last week 460 occurred on the south side of the river!

Common sense, energy, and science have here a grand work before them, and one comparatively easy. Look at this one simple fact made obvious by the last census. The mean "lifetime" in Liverpool is but twenty-five years, while the mean "lifetime" in Surrey is forty-five years! The people die twenty years on an average before their time in Liverpool, tried even by the result of a defective state of things in Surrey. The mean "lifetime" of all England is about forty years. *If all England were to form themselves into one large "Society for making the average Lifetime Seventy," and would one and all carry out the rules which science and experience point out and God permits,* THEY WOULD EFFECT THEIR PURPOSE! We should be saying only what we believe to be feasible if we suggested a Society for Living to a Hundred! Who'll join?

The new president of the Board of Health, Sir Benjamin Hall, takes office at a momentous period. In his address to the Marylebone vestry last week, the president said,—"Perhaps you are not aware that the General Board of Health has no jurisdiction within the metropolis. Anything I do must be by suggestions and recommendations. I shall not attempt to interfere in an arbitrary manner in a district over which I have no authority by statute, and in the other districts of the kingdom I think the board should be one of supervision, advice, and counsel, rather than of arbitrary character. I think—and this I wish to go forth—that those who are interested in matters of this kind in their several localities (that is, the ratepayers), ought to undertake as much as possible themselves. But, at the same time, if I find that local authorities having powers given to them essentially for the public good choose to be inactive, and that they allow evils to exist contrary to the good and welfare of the community, then I think it is the duty of the Minister to step in and to take part with the public." It is sincerely to be hoped that he will vigilantly act up to this promise. If he content himself with "advising," little will be done.

At the present moment the most energetic measures should be adopted in the metropolis and all over the country. Not a day should be lost. Every pound spent wisely will save ten even in a pecuniary point of view. As a first step, let us remove all decomposing refuse of every description; lessen the overcrowding of dwelling-places as much as possible; look to the drainage; obtain a good supply of water for all on *Sundays* as well as week-days, and appoint proper inspectors to see the necessary regulations carried out. To those who are nervous personally, and with this we will close our present article, written not to create despondency, but to inspire confidence—not to create a panic, but to organise a resistance certain to be successful,—we would suggest that good spirits resulting from good deeds are amongst the best preservatives.

IS THE NATIONAL GALLERY INDISPENSABLE TO ART CULTURE?

THE public is periodically reminded of the existence of the National Gallery by a fierce paper war, in which imputations are cast either on its management, the originality, or the cleaning of its pictures. To settle these numerous periodical disputes, a committee of the House of Commons examines witnesses—the heated combatants of the number—arranges the collected evidence with great skill to fit a preconceived formula, and publishes a Blue Book. In all these annual controversies, the importance of the gallery is taken for granted, whereas this is far from being an established invincible truth. To me, the attempt to raise art and taste by ancient example appears fraught with inconsistencies, abortive in its results—in a word, rotten with objections. A few years ago such an opinion would have been scouted—it is now, however, gradually becoming a public conviction. I shall disregard, therefore, those secondary and more ordinary questions concerning either management, picture cleaning, or originality, to discuss the one of primary import, and endeavour to prove to those as yet unconvinced, *that the National Gallery is not indispensable to the art culture of the country.**

This institution did not emanate from any spontaneous feeling on the part of the people that it was needed, nor from any deliberate consideration on the part of the Government, whether it might or not be the most direct means of cultivating taste, but from that very fertile source of error in this country, the propensity to imitate the educational systems of nations differing fundamentally in their political constitution from our own, and consequently unadapted to English circumstances and character.

The most celebrated art epochs were not created by national collections of a more ancient art—such galleries are peculiarly of modern institution. If history be interrogated it bears unequivocal testimony to the important fact, that the most distinctive styles of art did not emanate from peoples enslaved by the conventions of pre-existing styles, but from those who wrought at once from nature inspired by the more genial influence either of faith or philosophy. There has never been any attempt, that I am aware of, to prove that the Hindoo, Egyptian, Grecian, Gothic, &c. were tastes created, nurtured, and perfected by galleries of antiquities—scarcely a step can be taken in the investigation of this subject without discovering overwhelming evidence to the contrary, as well as of the ill effects of the modern system; for it may be observed that those nations which possess the best national stores of ancient art—unless as mere formal luxuries—exhibit the least originality. Whenever a nation anchors its art-faith in ancient or foreign example, it only attains a second or third rate position in painting, sculpture, and architecture, and, like the hindmost chariot-wheels, is destined

"Still to be near, but ne'er to be the first."

Rome robbed Greece of her artistic treasures, but after all was only able to heap her spoils together incongruously. Look at Italy and Spain, with their centuries of art, their cathedrals and palaces literally embalmed in painting and sculpture, surpassing both in quantity and quality any possible aggregation of old masters in our National Gallery, yet what is its educational power? What is the modern art and taste resulting from its presence? Many a provincial church even in these countries would be a far better school than the collection in Trafalgar-square if ancient example had power to re-establish the vitality of art, instead of merely encouraging effete ecclecticism.

The historical value of ancient art cannot be denied, but æsthetical and historical value are not necessarily co-related; neither is it unimportant that a people advanced in art should possess memoranda of the various epochs of art: for these purposes, however, the possession of the originals is not necessary; copies, engravings, and casts would answer every purpose required at a far less cost than at present, and without incurring the stigma of spoliation—a spoliation oftentimes sacrificing the decoration as well as the building; for a work of art removed from the position for which it was designed can give but a fragmentary notion of the triumph of successful adaptation—a triumph which may be ranked perhaps as the greatest achievement of art.

Not having a code of simple and perspicuous art principles which will bear the logical scrutiny characteristic of science to satisfy the judgment and guide sense, the proper temper for contemplating ancient art is one of doubt. If there were such criteria, then, indeed, we might affirm or deny the claims of Grecian and Italian art to be considered the *ne plus ultra* of human attainment, criticism might then exercise its high prerogative, judge past and present efforts, emancipate art education from all trammels, and pilot the taste of the future; but, instead of scientific, we have, for the most part, diffuse mystical treatises, which might be a reprint from the age of astrology and alchemy, so little do they partake of the clear practical spirit of the age. The cause of this appears to be the very fashionable but false notion that mystery is the essential element of the poetic. It was, perhaps, oftener and more necessarily so in rude ages, which were not in a condition of mental development to comprehend the higher poetry of real knowledge, which substitutes for the undefined the grandeur of definite conceptions. The mysticism of art compared with the certainty of scientific theory will, perhaps, be better understood by assuming the following positions, viz.:—If all the results of modern science were to be destroyed, these could be presently reproduced, because the criteria or pure theory is possessed which governed their production; but were all the famed Grecian statues and Italian paintings to be destroyed, would art feel that it had merely lost instances, not creative power? If it be affirmed that the creative power of art would not be affected by such a catastrophe, the independence of modern art is virtually acknowledged; if, on the contrary, such a loss be pronounced irremediable and fatal to modern practice, it must be from a consciousness that the true principles of art production do not exist. If modern art works on regardless of galleries of ancient art, why have them? If the true principles of æsthetics be known, why go to the cost of examples we could do without? If we are ignorant of the true principles of practice and judgment, why collect what is not understood, that of which we cannot with any certainty affirm the rectitude? In short, if the true principles of art be known, ancient example is unnecessary; and if they be not, it is useless, because not understood.

It has been often asserted that art power is totally distinct from scientific knowledge; the former is said to be instinctive, and too ethereal to be grasped by the firm apprehension of science: so inconsistent are the opinions which pass current on art topics, that the skill which is one moment exalted with the appellation of "divine," is the next debased, and declared to be the offspring of instinct. If instinct be the ruling power, why lament the degeneracy of art? which in this case must result from an inherent deficiency for which there can be no human remedy; and if this instinct does exist in the people, why spend hundreds of thousands on its past manifestations, which must be useless to a faculty, the charisteristic of which is spontaneity? Unless judgment be superior to instinct, all attempts to ameliorate taste must be futile.

Mere imitation, it is true, does not require that higher exercise of the faculties demanded by art. Art begins where imitation ends—art is the essential separated from its accidents. The end of art no less than that of science, is to discover "amidst the mass of fleeting phenomena, the stable pole:" until this invariable point is found, taste must be synonymous with caprice, and we must remain without a criterion by which to rectify the bad influences of fashion and false education, which reconcile men to the grossest absurdities. Habit is the stronghold which holds out longest against truth.

We have been taught to venerate Grecian and Italian works as standards of perfection—our eyes have been moulded to them, and we have been taught to reason from them as established truths; whereas these should conform to principles independently established. Until this be achieved, we must remain in the dark, and must either trust or doubt;—a blind trust is the fruitful source of most art superstitions, but the doubt of true minds is the first step to real knowledge. The conflict of opinion which would result from an abatement of our blind veneration would liberate truth in the long-run, establish taste and modern practice on a more catholic basis, and render picture dealers and art committees quite unnecessary; in fact, a state of things might be brought about in which the profession of the artist might be honoured, and the capacity of its members to rule in matters of taste be acknowledged, and which would finally put an end to that insult-

* Admitting the truth of much that is said by the able writer of the following remarks, we must not be understood as concurring in the full issue of his objections.—ED.

ing and ignorant non-professional interference to which no contemporary profession is subjected

If it were proposed to read Euclid backwards or to commence teaching in any branch of education with the more difficult instead of the easier forms, the theory would not meet probably with many advocates, yet this is precisely the system of educating by old masters and antiques. Those who uphold the present system declare "that it requires immense acumen and study to understand the perfect, and still more to penetrate the motives of injured examples of ancient art;" and yet from these premises draw the absurd conclusion that therefore such works are well adapted to tutor the student and the public, who are comparatively ignorant in such matters. In the arts as in mathematics there is no royal road to knowledge—there is no magic spell whereby art may be called forth perfect as Minerva from the brain of Jupiter, it must submit to grow and obey the true laws of progression. The same sources of information are open to the moderns as to the artists of the middle ages and of antiquity, why should they not therefore derive directly from these their facts and principles? If the moderns had continued to pin their faith to ancient philosophy as long as they have to ancient art, there would have been no practical science, and it is now familiar to most people that a new era commenced as soon as Bacon convinced the world that it had too trustingly believed in the infallibility of antiquity, and taken for granted dogmas that stood very much in need of verification. It is in the course of nature that arts and sciences should degenerate after their principles have been used for a long period deductively. The experience by which they were built up is forgotten, and the principles themselves are either perverted or misunderstood: an art or science, like an edifice, dates its decadence from the striking of the scaffold, passing through all the lapses of decay, and subjected to all the tamperings of ignorance till it lies an utter ruin.

The arguments opposed to the study of ancient art are often thought to be shaken by the following question:—Are we, it is asked, to cast aside the experience of ages and begin over again? This question, however, arises from a misconception of the exact position taken—experience is confounded with its results. We have the results of the ancient masters' experience, and that is all. The vital "nous" by which these were produced has no record wherein the steps of the experience and the induction of those art canons which were realised can be traced with any degree of certainty. During the great art epochs, experience was transmitted in unbroken succession from master to pupil, and the progressive development of Grecism and Italian art may be observed under the influence of this vital power; but, as with other ancient arts, the transmission of experience ceased in ages past, leaving us mute example instead of speaking principles. There are but two courses to pursue, therefore, —either to think for ourselves, or to imitate what has already been accomplished.

Those who throw off allegiance to the past, however, must bear in mind—a point which cannot be too strictly enforced—that mere literal imitation is inadequate to attain the heights of art. The aphorism which has been so frequently repeated of late, "Imitate nature," is calculated to set the young artist contented at the base of knowledge, instead of awakening that spirit of inquiry and investigation which mounts from facts to principles. Instead of exhorting the student to "imitate nature," it would be far better to exhort him to "study." Imitation will never lead him to comprehend nature, but study may. "Imitate nature!" Why, what else is there to imitate? Photography obeys the injunction. Is the art student to be a camera or a thinking being? As the philosopher and man of science respectively seek to know the central laws of moral and physical phenomena, so, in like manner, the true artist aspires to know and realize the central forms and aspects of the visible world.

If the system of art education by ancient example were correct in theory, there would be insuperable difficulties against its realization in this country. In the first place, we have no one who is qualified to guarantee the originality of works purchased for the national collections, nor do we believe that any one at all conversant with art can conscientiously assert that judgment at all approaching infallibility is possible in this respect. It is quite possible, however, to forge "old masters" without much fear of detection. Artists, dealers, and critics have been deceived over and over again, and will still be deceived as long as the present absurd system is maintained. If the nation buys Raphaels, Correggios, &c. at all, therefore, it must necessarily be at the "mercy" of the dealer and parties interested in the sale of pictures, whose policy it is and will be to abuse all purchases till they get the power of recommending on their own account, and then everything will be well varnished and original.

The *chef d'œuvres* of ancient and mediæval art are guarded with jealous care, and are seldom to be obtained at any price from the continental cities and towns to which they belong. The opportunities, therefore, for purchasing first-rate works, must consequently be very, very rare. The possession of dingy paintings, however, being fashionable, and therefore much coveted, this morbid taste must be appeased by second or third rate works, which, if not forgeries, are from the scum of antiquity, which is constantly floating into the English market.

Let, however, the supposition be entertained for a moment, that specimens may be obtained of unimpeachable originality; yet, as examples, they would still be imperfect, not merely from artistic short-comings, but from those deteriorations effected by time and chemical changes, which are far from inconsiderable. The least acquaintance with the nature of the vehicles and pigments used, would be sufficient to convince most persons, that even such masterpieces would neither be faithful representations of what they were when fresh from their author's hands, nor of the intentions of those who may have painted them. At best, therefore, such specimens are calculated to mis-educate; for these very imperfections come at last to be esteemed beautiful by force of habit. The power to separate truth from its obscuring accidents could scarcely be expected from those who are taught to revere these works as the criteria of judgment. The only objects successfully accomplished by the present system, appear to be the encouragement of the old-master mania—the "keeping up" of the exorbitant prices of old pictures, and the patronage of imposition by the premium offered to deception.

If the present system of art-education be false in principle, it may be asked, what is to be substituted? To which it may be replied,—Continue to improve the system of general education; insist that ocular and aural art be included in that education. The more general education is improved, the more elevated will taste become,—the greater will be the demand for the exercise of art, and the greater the stimulus to achieve excellence. Employ art more extensively in public buildings; let the National Gallery be entirely modern—chiefly, but not exclusively, English; let there be specimens of the talents of eminent foreign artists as well as of our own. These are — as they always have been—the only successful methods of raising and fostering art. We are told that "Greece and Italy demanded sculptures and mural paintings,—the one to commemorate its heroes and realise its mythology, the other to adorn its churches and altars with illustrations of faith;" that "art gradually rose through successive gradations, rising from the feebleness of infancy and the beauty of youth to the grandeur of manhood;" and that "in the pre-Phidian and pre-Raphaelite babyhood, art merely endeavoured to imitate the individual, but as it grew in years and strength, better reason led to the contemplation and realization of the ideal." Why, then, if the excellence of the result of this progressive development be acknowledged, should another course be adopted under the false impression that art may be forced to culminate by unusual means. It is as vain as would be the attempt to make infants wield the weapons and armour of men. Imagine the stimulus modern art would have received had the more common-sense means indicated been adopted, and the hundreds of thousands spent in the purchase of old pictures been devoted to the employment of English artists. All that is necessary to insure the progress of art is to educate the people properly and employ the artist. But no, — non-professionals have the presumption to set themselves up as teachers, and lord it over those immeasurably more capable. From these it would appear that the English artist is not to be trusted; he is so ignorant, base, and indolent, that a committee of taste must teach, chastise, and rouse. We do know that such tribunals embarrass invention, give the artist many heart-pangs, and ultimately enfeeble his work. Has not art struggles enough in this country, without this "break" upon its progress? Away with this absurd system,—employ the accredited only, if the talent of unaccredited men cannot be discerned, and let them act without interference. The nation may wait long enough for the perfecting of art, if artists are not employed. It is the business of the nation to set talent into activity, to make it worth men's ambition to devote their energies to the study and improvement of the fine-arts, not to interfere with the legitimate pursuits of artists. It may safely leave the rest to that spirit of emulation which perfected art in ages past. At present England has to look forward to the possessors of industrial wealth for its art-future; their sympathies are not with dead forms, but living ideas. They are becoming extensive purchasers of easel pictures, and, in some cases, have even commissioned mural paintings. Their example will, by and by, be followed by public companies in their halls and buildings; and there can be but little doubt that, in the course of time, our railway stations will be decorated with paintings, offering, as they do, splendid surfaces for the display of historic and poetic art.

METER.

CHURCH-BUILDING NEWS.

Fishtoft.—The parish church (St. Guthlac's) having undergone various decorations and restorations, has been re-opened. In scraping away the yellow plaster, three windows were revealed, evidently of early Norman architecture, and two aumbries in the chancel, of same period; thus rendering it probable that the present nave and aisles were added to the old Norman building. The old square pews are replaced with open oak seats; the west gallery, which blocked up the tower arch, has been removed; and the chancel screen has been restored. The walls throughout have been stripped of plaster, and pointed, the sacrarium repaved with encaustic tiles, and the altar raised on its foot-pace, and elevated. The organ now stands at the east end of the south aisle. The east window, it is hoped, will soon be filled with stained glass.

Spilsby.—Hundleby Church, which has for a long time been mouldering to decay, is being demolished preparatory to a new one being built on its site. The contractors for its erection are Messrs. Ruddall and Thompson, of Peterborough.

Louth.—The foundation-stones of two chapels at the new burial-ground on Julian Bower-hill, were laid on Friday week. One of these chapels is intended for Dissenters, and the other for those of the Established Church. Messrs. Bellamy and Hardy, of Lincoln, are the architects, and Mr. Levitt is the contractor. The grounds will be entered by arches, or gates, from the east and west,—the latter, on the London-road, in the old baronial style.

Newport (Isle of Wight).—The foundation-stone of the new church of St. Thomas is to be laid on 24th instant, by his Royal Highness Prince Albert, according to the *Hampshire Advertiser*. The interior fittings of the old church and the roof are being removed, and a large north-eastern portion of the outer walls will be levelled so as to arrange most conveniently for the laying the foundation-stone, it being intended to have standing room for at least 2,000 persons on that occasion. The numerous vaults, which appear to cover the whole area of the interior, will scarcely be disturbed in any way. A quantity of square mozaic paving tiles—black, white, and yellow—have been found under the pew flooring. Mr. Halls, artist, has made several sketches of the

old church, giving different views of the exterior; and Mr. Frampton has just published a view of the interior by Mr. Philip Brannon. It is said to be the intention of her Majesty to erect a monument to the Princess Elizabeth, daughter of Charles I. who was buried in this church, and whose remains were found in a vault near the altar, in 1793, when the churchwardens removed an old copper-plate from the churchyard wall (placed there *over* an inscription to the memory of an old pastor of the parish, who "disliked that dead bodies should be buried in God's house"), and inserted it into a stone near the altar, with an inscription on the back of it, to the memory of the princess.

Northfield.—The parish church, the chancel of which was restored a few years since by the rector, Rev. H. Clarke, is undergoing repair. The flat ceilings which have hitherto disfigured the edifice have been removed, and the original oak principals are being worked as far as possible into the new roofs, which will be open, and in conformity with the original design. The south wall is being restored, new buttresses having been added; as also mullions and weather mouldings to the windows. In the chapel in the south aisle, a decorated piscina (indicating the former existence of an altar) has been brought to light. The sum necessary for the completion of the work, about 500*l.*, has been raised chiefly by subscription. The Rev. H. Clarke has, at his own expense, recently restored the chancel of Cofton Hacket, one of the chapels of ease to the parish church.

Mold.—On Thursday week, according to the *Chester Chronicle*, the corner stone of the new apse, which is now being added to the parish church, through the liberality of Mr. J. W. Eyton, of Leeswood, was laid by Mr. Eyton.

Liverpool.—A local correspondent sends us some further particulars as to the new church of All Souls, to be built for the Vauxhall district. The style is Early Decorated, the plan cruciform, the porch being under the tower, which will be surmounted by a broach spire. The nave and transepts are in one span, and galleries will be erected across their extreme ends. Mr. A. H. Holme is the architect. The local prints inform us that "the interior will be free from unsightly pillars in the nave and every other part," and that Grassendale Church (with which it is almost identical in plan) has given great satisfaction to the public. Our correspondent adds, "As this church seems to be considered a model in Liverpool, it may be as well to point out some objectionable features in it. The absence of the 'unsightly pillars' gives place to an ungainly breadth of nave and transepts, while the apsidal chancel (by no means a large one) looks especially dwarfed by the contrast of the broad nave: for the same reason the side-walls are comparatively low; so that the small windows are not sufficient to light the more elevated pulpit, which has therefore to be lighted by a square skylight in the roof, which is anything but an addition to the beauty of the building. The pews are made after the model of last century, plain square boxes, and the whole of the interior mouldings, bosses, corbels, and other ornaments, instead of being carved in wood and stone, are shabby imitations in stucco and plaster. The chief defect in the comfort of the church arises from the huge expanse of roof, which, being exposed to the sun, causes great heat during summer. It is to be hoped that some of these defects will be avoided in the new church of All Souls. It would also be well to avoid the use of chimney-pots on the exterior, and especially one *sticking out of the side of the spire*, as at Grassendale. A new organ of considerable power and sweetness is now being erected in this church."

Birmingham.—The foundation-stone of a new chapel, about to be erected in Long-acre, Nechell's-green, in this town, for the Primitive Methodists, was laid on Monday in last week by Mrs. Sarah Cooke, of Aston Manor. The building will be erected by Messrs. Cornish, builders, of Bloomsbury, from a design by Messrs. Fallows and Smith, of this town, and will afford accommodation for about 250 persons.

Wem.—The new cemetery for the parish of Wem has been consecrated by the Bishop of Lichfield. The chapel is entirely composed of Grinshill stone, and is in the Early English style of architecture. A shafted doorway forms the entrance, the arch being enriched with the tooth ornament. Above this is a triangular window, which, with one of three lights at the opposite end, is filled with stained glass. The side walls contain single lancet lights. The roof is of the trussed rafter description, and open, and the timbers stained to imitate oak. The flooring of the entire building is of the Staffordshire red and blue tile. On the exterior effect is gained by elevating the building on a terrace about 18 inches above the general level of the ground. The cemetery is surrounded by a wall, the main front having an arched entrance with ornamental gates, the walls on either side being relieved by buttresses, finished by a moulded coping. Mr. Dodgson, of Shrewsbury, executed the several works, which it appears he also designed. The land comprises nearly an acre.

Elvaston.—Some time ago a painted window was erected in Elvaston Church to the memory of the late Earl of Harrington, by the Countess Dowager of Harrington. A voluntary memorial to the late earl has now been added in the form of a carved oak screen, under the superintendence of Mr. H. I. Stevens, of Derby. The screen stands in the chief arch under the tower, beneath the window, but about 16 feet in advance, and bears an inscription in Gothic characters.

Clifton (Derbyshire).—The foundation-stone of a church school was laid on Tuesday in last week at the village of Clifton, near Ashbourne. Mr. W. Evans, of Ellastone, is the contractor for the building, which will contain a teacher's residence besides the school.

Salford.—St. Stephen's, Salford, has been further restored at a cost of between 400*l.* and 500*l.* The body of the church has been repainted fawn colour; the pillars supporting the galleries and the roof painted in imitation of Sienna marble, and the old green baize on the pews has been taken off, and the whole stained. The front of the galleries has been painted in imitation of oak, with gilded mouldings. The chancel is painted in light green and drab, and on each side of the stained glass window placed there some time ago, niches are left open upon which to paint the Decalogue. The windows have been restored, and, at the same time, of altered shape. One gentleman has presented a medallion window, by Howe, of London, for the baptistry, the subjects being the Presentation in the Temple, and other events in the early history of our Lord. Another for the south side of the church is in preparation, by Hardman, of Birmingham. These, together with the east window, given a few years ago as a memorial of the late incumbent, will make three stained windows. A gentleman has offered a sum for the decoration of the new apse, also built a few years ago, which will be proceeded with as soon as the design is completed. The entrance into the body of the church has hitherto been by two side doors opening directly upon the aisles, exposing these parts of the edifice to draughts. The entrance is now through porches converging first into the baptistry, and then opening into the centre of the nave.

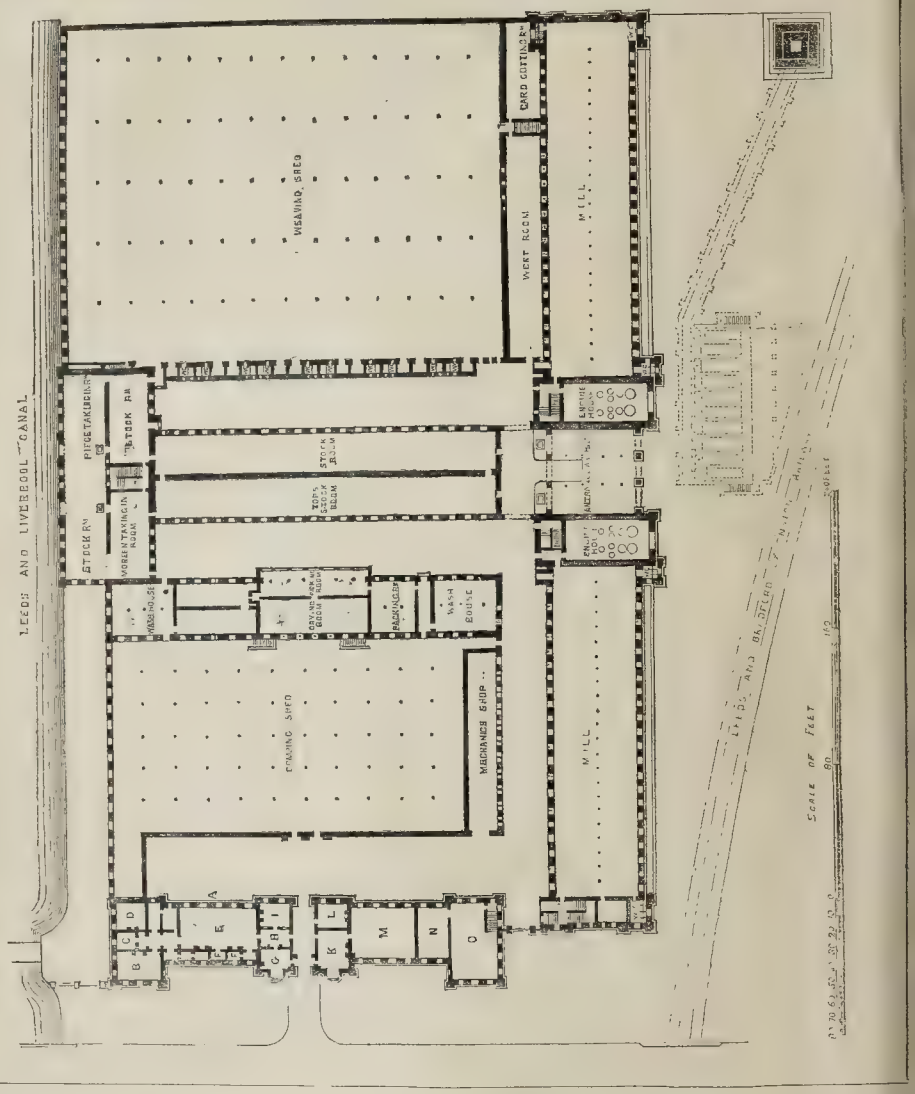
Crosby.—The foundation-stone of the new parish church of Crosby-upon-Eden was laid on 3rd inst. by Mr. W. N. Hodgson. The design was furnished by Mr. R. H. Billings, architect, and will be carried out by Mr. Charles Armstrong, builder.

THE SALTAIRE ALPACA MILLS, NEAR BRADFORD.

WE have, at different times, mentioned and described the enormous establishment erected in the valley of the Aire, near Bradford, in Yorkshire, by Mr. Titus Salt. The accompanying engraving represents the principal front of the mill proper, and we give also a plan of the ground floor. The architects were Messrs. Lockwood and Mawson; and Mr. Fairbairn, who has given full particulars of it in his recent work "On the Application of Cast and Wrought Iron to Building Purposes," reviewed at the time in our pages, was the engineer.

The size of the building is colossal. The floor area is about 12 acres. The main range of buildings, or the mill proper, runs from east to west, nearly parallel with the lines of railway from Shipley to Skipton and Lancaster. This pile is six stories high, 550 feet in length, 50 feet in width, and about 72 feet in height. A bold Italian style has been adopted, and it is carried out in stone. Immediately behind the centre of the main mill, and at right angles with it, runs another six-story building, devoted to warehouse purposes, such as the reception and examination of the newly-manufactured goods; and on either side of this, again, lie the combing-shed, or apartment, wherein the fibres of the alpaca, mohair, wool, &c. are combed by machinery, and the handsome range of buildings devoted to the reception of offices, and the great shed for weaving by power-looms.

The mill has a cellar-story 10 feet high, extending on either side of the engine-houses to the extreme ends of the mill. The first story is 16 feet from floor to floor; the next four stories are each 14 feet high; and the fifth, or attic story, measures 8 feet from the floor to the tie-rod, and a further distance of 9 feet 6 inches from the tie-rod to the apex of the roof, making the total height of this attic story 17 feet 6 inches. It must be further remarked, that this top story, being above the levels required for the entrance archway and the two engine-houses, extends from end to end of the building, 550 feet; and is supposed to be the largest room in Europe, not excepting the Long Gallery of the Louvre at Paris. The whole of this building is fire-proof, with stone walls, cast-iron columns, and hollow brick arches. The side-walls throughout the entire length of the structure are made hollow. Through these openings a supply of pure fresh air to each room is admitted and regulated a few inches above the floors; and corresponding outlets for the heated or vitiated air are provided above. Each room is longitudinally divided by a single row of columns: and it was found expedient to form two unequal spaces, in order to accommodate the machinery, and leave in the centre a thoroughfare free from obstruction. The divisions are, therefore, respectively, 27 feet 6 inches and 22 feet 10 inches. In its construction as a fire-proof structure, the mill varies from the usual practice in one important particular, the arches for supporting the floors being constructed of hollow bricks.



The roof, like the other parts of the building, is entirely fire-proof. It is composed of 128 principals, formed of T-iron, angle-iron, and tie-rods. The ends of the principals are fitted into cast-iron shoes, which rest upon the walls; and to these again are attached horizontal transverse rods, which support the principals, and retain the whole in form. From the top, on each side of the ridge, and along the whole length of the building, the room is lighted with glass, and the position of the frames is so situated as to render the room at once light and cheerful in appearance.

In the large weaving-shed, on the plan, it will be observed that it is divided into parallelograms of 36 feet in one direction, and 18 feet in the other. At the angles of each division cast-iron columns are fixed, which support thirteen lines of cast-iron gutters; and these gutters are constructed of such dimensions as to form entablatures for the columns, and supports for the reception of the roof, which extends from east to west, in the same direction; as also the glass divisions in every compartment which face the north, and give nearly at all times of the day a steady uniformity of light.

The peculiar features in this department are, that the mill-work and driving-gear are all below the floor; and the whole of the immense area is free from the obstruction of straps, wheels, drums, or other impediment, tending to obstruct the view. The result of this is, that the overlooker has full command of the whole room at a single glance.

The gas-works are situated at the lowest point of the land, between the canal and the river; and the gasometer-tank, 62 feet diameter, and 20 feet deep, is sufficiently low to be filled either from the large water-pipes or reservoir intended to supply the town of Saltaire, or from the canal, which flows at a level of about 23 feet above the bed of the river. The gasholder is 60 feet in diameter, 18 feet deep, and contains 50,000

GROUND PLAN OF THE SALTAIRE MILLS.

cubic feet of gas, or a supply sufficient to maintain 5,000 lights. The works are supplied with soft rain-water collected from the roofs, and the condensed water from the steam used in heating the mill.

The prime movers of the Saltaire mills are two separate pairs of condensing steam-engines, situated, as shown on the ground-plan, at each side of the main entrance. These engines are calculated to exert collectively a force of not less than 1,250 horses, calculated according to the usual rule of a horse-power, being equal to a weight of 33,000 lbs. raised one foot high in a minute. The flame and gases from the boiler-furnaces are gathered into one main flue, which runs direct to the chimney-shaft. The shaft stands at some little distance in front, and rises to a height of 250 feet! It is built of stone, in the style of an Italian campanile; but to preserve the column from the action of the heated currents, and to preserve a parallelism of flue from bottom to top, it is lined with a casing of fire-brick, which leaves a space of warm air protecting the external walls, and maintaining a perfectly uniform and efficient draught.

The total length of shafting is upwards of 10,000 feet, or very nearly two miles, varying from 14 inches to 2 inches diameter, weighing upwards of 600 tons, and revolving at velocities varying from 60 to 250 revolutions per minute.

The capabilities of Saltaire mills may be measured by the statement, that it will contain within itself the means, of every kind, of preparing, from the raw material, the supply for not less than 1,200 power-looms; and that the daily yield or production of these 1,200 looms is the astounding total of 30,000 yards of alpaca, or mixed cloth per day, or upwards of 5,000 miles per annum.

Amongst the collateral works, we may mention that only upwards of 700 houses and cottages for the workmen, with shops, &c. form part of the design, about 150 of which are now in hand or completed. Baths and wash-houses, a covered market, schools, church and parsonage, and model lodging-houses for the work-people are also projected, and will steadily be proceeded with. The gas works, constructed on White's hydro-carbon principle, are on the point of completion, while a tubular girder bridge, in 5 bays of about 70 feet length each, spans the canal and River Aire, thus giving access to the property lying on the left bank.

Our Roads.—Nothing short of granite masonry, it seems, and hardly that, is adequate to the incessant wheel traffic of a London highway; but admitting this, might not part of the benefit of the departed wood pavement be retained by a side border of wood or of an elastic body to deaden the noise and intercept the vibration from the houses, thus conducing to their longevity and the comfort of their occupiers. The latter half of the advantage, at all events, will be admitted by readers of the *Builder*.

T. T.

THE SALTAIRE MILLS, NEAR BRADFORD.—Messrs. Lockwood and Mawson, Architects.

RAILWAY REFORMS.

In your paper of the 5th inst. you notice very properly the inefficiency of our railway carriage system; and though many letters have appeared on the subject, there is a certain defiant position taken by these monopolists which can only be checked by a decree of Government.

On arrival at a junction or a terminus station, frequently a detention of ten or fifteen minutes takes place to collect the tickets, and sometimes much more before you can obtain your luggage from the van in which it is piled by ignorant porters, regardless of strength or weight; but remonstrance is useless, and a station-master is a mere myth. Now Crystal Palace detentions are excusable, they being pleasure excursions only; but when (considering the monopoly of all land transit) business is delayed by King Rail's mismanagement, it becomes a matter for a Government remedy, and more especially, as you notice, from the danger to the fair sex. The traveller, it appears, is no more secure than, in Dick Turpin's day, were Hounslow-heath and Shooter's-hill; or in the present day those unfortunate countries infested by Bashi-Bozouk *protectors*.

England is a most wonderfully enlightened country, but it appears the Far Westers beat us. However, leaving them far away, only cross the Channel, as I have frequently done since the time that the railway *convois* superseded those of Van Gend and Co. and enter the station at Ostend. Your luggage is weighed and ticketed, and you receive your duplicate: all the luggage which you have yourself pointed out is placed in a large van, divided into compartments, with the name of each station indicated. The carriages have *hand*-bars and *foot*-boards on each side, along which the guard can pass safely; so that as soon as a station is passed he enters the carriage and collects the tickets for the next, and so on to the end of the journey. On arrival, the luggage for that station only is taken from its compartment, and the traveller claims his own by his ticket.

Now this is not an affair of yesterday, but what occurred sixteen years back, and in a country which is considered primitive compared with this; and further, each carriage contains a danger-signal, which, on being sounded, brings the guard, and assistance of course.

R. D. C.

ZINC AS A COVERING.

In Mr. Burnell's last article in your paper, "On the influence of some external agents on the durability of building materials," he comes, as it seems to me, to a groundless conclusion respecting the fitness of zinc for roofing purposes.

Professor Berthier, of the French Scientific Academy, and other eminent French chymists, unite in the opinion, that the coating referred to is an oxide of zinc harder than the metal itself; and which forms itself immediately the sheets are exposed to the air, and adhering to them (without becoming any thicker), forms a permanent protection against the attacks of gases, and the impure atmosphere, in a similar manner to the verdigris on the ancient bronze statues.

The results of the numerous experiments made on this subject are confirmed by facts. Mr. Burnell is mistaken in saying it is only used in Paris, and other towns, where wood is the ordinary fuel. It is very generally used in the coal mining and manufacturing districts of Liege, and it certainly could not be put to any greater test than when applied as a covering to gas works, as at Charleroi, and I believe at other places. At Brussels coal is the usual fuel, yet the use of zinc for roofing is constantly on the increase, and the covering on the principal theatre there has had no repairs since it was laid on, now thirty-five years ago. And although it is employed in most of the French and Belgian seaport towns, I cannot choose a better example than Marseilles, where it is subject to the sea air, and noxious gases arising from the bad state of the water, increased by the great heat.

I think, however, I can give the real reason of the results not having been so satisfactory in England

It is well known by numerous experiments and examples that, in order for the oxide to protect the sheet, there must be a sufficient thickness of pure metal between the two coats of oxide, otherwise they will meet, and so consume the sheet; and it is for this reason that the thin layer of zinc over galvanized iron is so soon destroyed. It is, therefore, necessary to use a proper thickness of metal, which is very rarely the case in London, but if employed, would render zinc as advantageous a mode of covering here as on the continent, where the principal argument in its favour is its durability.

R. G. F.

RESULTS OF THE CENSUS OF 1851.

THE PROGRESS AND OCCUPATIONS OF THE PEOPLE.

The concluding volumes of the results of the Census of 1851, recently published, contain the ages, civil condition, occupations, and birthplace of the people, with the number and ages of the blind and dumb, and the inmates of workhouses, prisons, asylums, and hospitals.

The mass of information collected, and here tabularized, under the skilful direction of the Registrar-General, and his able coadjutors, Dr. Farr and Mr. Horace Mann, will sufficiently account for the length of time that has elapsed (since March 1851) before these volumes have appeared.

In former numbers of this journal,* a brief account will be found of the number of people, families, and homes.

The portion of the present Report referring to the ages and civil condition of the people, is replete with the most interesting and important facts, and summary tables of vast importance, presenting for the first time facts upon the most interesting social questions, and opening a field of philosophical inquiry, by which truth will supersede theory, and exact knowledge of facts will not only influence legislation, but regulate and improve the social condition of the British race.

A census being a national as well as a topographical survey, it is necessary, so as to reach the interest of all, to give, as far as is practicable, detail returns; and this accounts for the size of the present abstracts, for they give, not only county, but district returns of all males and females of the age of 20 and upwards, with their birth-places and occupation; their civil condition; whether unmarried, married, or widowed; of the blind and deaf—a branch of statistics hitherto comparatively unexplored; with a return of inhabitants of all public institutions. But the most interesting page, perhaps, is that to which Mr. Petermann's map is annexed, which he has compiled from the tabular data, and which shows the distribution of employment over the country, illustrated by means of ingenious symbolic devices representing the manufactures and crafts in which the masses are employed. Neither have the industrial or agricultural statistics been overlooked, for here is a return of the number of men employed by masters, and masters employing men, both in trade and labour, with the acreage of farms, cultivated and uncultivated; and although these latter may not be quite so complete as may be wished, and for which several reasons are given, yet the deductions made from the returns obtained may be received with faith, considering they have been compiled by men so well skilled in the science of statistics.

It is impossible in the limited space of a journal like the *Builder* to give anything more than a few of the prominent facts.

In previous returns of ages the number of males under 20 years of age and of 20 and upwards were considered nearly equal; but more elaborate deductions from those of 1851 reveal the facts that, with the army, navy, and merchant service omitted, the males of 20 years and upwards (5,475,540) exceed the males under 20 (4,779,313) by 696,227.

The number of the population of the age of 20 and upwards in 1851 exceeds that under the age of 20 by 2,068,782.

The Report states that the increase in the population under 20 years in the 30 years (1831-51) has been 2,577,046, whilst that of 20 and upwards has been 4,185,163. The males from 20 to 40 in the same period has increased 1,226,832, and the females 1,243,073. The population under 20 years has increased during the 30 years 37 per cent. whilst that of 20 to 40 years has been 60 per cent.; 40 to 60 years, 55 per cent.; 60 to 80 years, 45 per cent.; and that at the extreme period of life, after 80 years, only 34 per cent.

Assuming that the population under the age of 10 years and at 70 and upwards are ineffectives, and chiefly sustained by the industry of those from the age of 20 to the age of 60, it will follow that in 1821 the 6,367,991 persons of the two middle ages sustained 4,355,166, or 68 per cent. of the ineffectives; while in 1851 only 5,797,295, or 57 per cent. were sustained by 10,082,296 of effectives. Tested by these facts the strength of the nation has increased faster than its numbers.

In showing the proportion that enter each of the five ages that are characterised, the Report says, "If 100,000 children, born at the same time, are followed and numbered at equal intervals in the journey through life, it is found that, according to the present mortality in England, 66,061 enter at the age of 20 the second; that 53,824 enter at 40 the third; that 37,998 enter at 60 the fourth; that only 9,382 live through the four, and at 80 enter the fifth age, which it is not probable that more than one or two will pass over."

The *probable lifetime* of a male at birth in England is 45 years. The mean *lifetime* that males live after birth in England is 10·36. The mean age of the male population of Great Britain in 1851 is found to be 25·87. The average age of marriage in England is 25. The number of persons in 1851 under 25 being 11,573,377, and 25 and upwards, 9,611,633. The proportions of the married in the population of Great Britain, amount to 33 in every 100 males, and to 32 in every 100 females, of all ages.

If the women of Great Britain at the age of 20 and upwards are compared with the *men at home* only, the numbers in excess are 540,579, and at the age of 20—40 the excess is 261,060. Many women of this age are, however, married to men of ages further advanced.

Great Britain contains 3,391,271 *husbands*, and 3,461,524 *wives*, 382,969 *widowers*, and 795,590 *widows*. from the age of 20 and upwards the *bachelors* amount to 1,689,116; the *spinsters* to 1,767,194.

The Report, after considering at some length the principle and progress of population, concludes by stating, "that there is nothing, in the past or in the present conjugal condition of the population to inspire any apprehension of a redundancy or a scarcity of population in Great Britain, but a great deal to encourage the policy of further improvement in their condition—in the training of the young, in the circumstances in which children are born and families live; so that the British race, growing better and greater, may increase in numbers at home, and continue to send out every year thousands of new families to the colonies." The abstracts of occupations which follow, show how the 21,000,000 of people individually are employed. The greatest value must be attached to these, as numerous important results can be deduced, and much statistical information gathered of the state of industry and agriculture in the several classes.

The difficulties encountered in correcting and tabularising the errors of nomenclature were very great. The whole population had to be passed in review, and the several thousands of names classified under their respective heads. An alphabetical list, amounting to 1,260 distinct occupations, is given of males and females under twenty, and twenty years of age and upwards, from which any one can with ease make a classification for his own use. The double occupations were a source of great difficulty, as, for instance, a member of Parliament is often an occupier of land, and an innkeeper a farmer; but difficulties such as these have been surmounted, and a classification adopted, on which, "at a future census, such inquiry may be made into the industry of the country, in all its ramifications, as may be in every way useful, and tend at once to extend science, to promote production, and dissipate subversive theories." The distribution of the population is into two

* Aug. 6 and Nov. 12, 1853.

great groups, (1) those that work, and those (2) who have no definite occupation; and a due deduction being made for infirm persons, and parties retired from trade or professions, the number of the second class will not be found great.

Those engaged in definite occupations are arranged into fourteen distinct classes, and these again into sub-classes, so that producers, distributors, and consumers, can be ascertained at a glance.

The annexed table shows the occupations of males and females of Great Britain and Isles and London:—

It must be remarked, that each of these sub-classes is divided into further detail, *ex. gra.*—In Class III. in Great Britain, Sub-class No. 1 comprises 18,587 clergy of the Establishment, and No. 2, 3,111 barristers, and 13,256 solicitors; whilst in No. 3, 2,321 are returned as physicians, and 15,163 surgeons and apothecaries.

In Class IV. the sub-class 2 includes 4,915 painters, many being drawing-masters, whilst many of the 2,971 returned as architects in Great Britain (1,114 of whom are in London), are undoubtedly builders; "and here," says the Report, "the want of a better nomenclature is felt." To account for the singular few returned under No. 3, many undoubtedly are returned under the learned professions.

In Class XI. No. 15, comprises nearly 7 per cent. of the total males, of twenty and upwards of Great Britain. amongst these are 2,595 surveyors, 11,741 builders, 155,254 carpenters and joiners, 58,848 bricklayers, 87,338 masons and paviors, 6,255 slaters, 15,036 plasterers, 1,529 paperhangers, 51,382 house-painters, plumbers, and glaziers. Besides these, there are many connected with building that appear under other classes. Class XIII. includes 3,821 timber merchants, 32,436 sawyers; and in Class XIV. 23,333 are engaged as stone, 6,122 as slate, 5,423 as lime quarriers; 1,287 are marble masons, 23,374 men, and 6,586 youths, brickmakers; 4,873 are carvers and gilders. The copper, tin, lead, and iron mines employ 18,468, 12,912, 16,680, and 27,098 males respectively. The locksmiths' and bellhangers' are 6,332, and in the manufacture of nails, 28,533 persons are employed, 18,548 are males; 40,046 males are returned as engaged on railways, *exclusive* of 10,032 as road labourers specifically so returned.

In the elaborate tables of the *birth-place* of the *inhabitants* which have been framed, it appears that the soldiers and seamen abroad being deducted, 20,959,477 remain as the population of Great Britain: of these 17,234,490 were born in England and Wales, 2,754,360 in Scotland, 122,808 in the islands in the British seas, 733,866 in Ireland, 41,316 in the British colonies, and 72,637 abroad, 12,774 of the latter being British subjects. Of foreigners in Great Britain, there appear to be 56,665; but the number of British subjects abroad who are not counted in the population greatly exceeds these; 20,357 alone being returned as living in France.

The returns of the blind give a total of 21,487, or *one* in every 975 of the total population; but nearly one half of these are above sixty years of age.

The number of deaf and dumb is 12,553, or *one* in every 1,670. The number of the public institutions was given in the first Report: by further investigation, the present reports more accurately their numbers, ages, and occupations.

The concluding note in the Report states that the cost of the last census of England and Wales, exclusive of postage and printing, was at the rate of 5*l.* 9*s.* for every 1,000 of the population; whilst in 1851, when the inquiry was greatly exteuded, it was but 5*l.* 4*s.*

OCTAVIUS HANSARD.

WHITEHALL AND DOWNING-STREET.

IN my last communication, I suggested a design for a range of public offices on the site of Gwydyr House, Whitehall, to form a large and handsome building in continuation of, and in unison with, the Banqueting-house or Royal Chapel. By a curious coincidence, a discussion arose about the same time in Parliament, on the oversight of the Government, in having suffered the lease of Montague House to be renewed. Upon this point I shall not presume to offer an opinion, but there is no doubt that had the Government of the day thought proper to retain possession of the Crown lands adjoining Whitehall, as the leases fell in, they would have had ample space *for all the public offices in London*, and they might at the same time have let off a very valuable frontage towards the river for building private houses of the first class, like those of the Marquis of Ailsa and Sir Robert Peel!

Instead, however, of thus availing themselves of land already belonging to the Crown, they

purchased, nearly twenty-five years ago, at a very great expense, a large block of houses in Downing-street, Fludyer-street, and King-street, and so great was their haste to obtain possession of the ground, that they also bought up the interest of the leaseholders, and even compensated tenants-at-will for waiving the customary notice. The houses were pulled down without delay, and yet, from that day to the present, not a single brick has ever been laid for any new building, and high rents have been paid all the time for private houses in various situations. What an enormous loss has thus been occasioned to the public! whereas, if the old houses had been kept up till the ground was actually wanted, all the compensations, except to the ground landlords, would have been saved, and the rents would have brought in a large annual return for the original outlay. The present Government are of course not answerable for this serious blunder, but there must have been a great fault somewhere, and a reckless neglect of the public welfare and interest.

We are now given to understand that it is intended to rebuild the Secretary of State's offices on this site, and whenever this is done, I hope it will be a part of the plan to leave a handsome opening, with an ornamental gate, into St. James's-park, at the end of Downing-street, which would form a striking vista in a line with Richmond-terrace. I think it would also afford a distant view of Buckingham Palace. This entrance into the park might in time supersede the dark and gloomy one by the Horse Guards, and relieve the public offices in that building from the constant noise and vibration of carriages passing under the archway.

I have a strong opinion that Richmond-terrace, with such a termination towards the park as I have here suggested, would have been the best line for the new Westminster-bridge. It would then have been removed to a sufficient distance from the houses of Parliament, and would have fallen better into the line of the Bridge-road, at Lambeth, than the old course does; but the plans of the Government seem too far matured for so important an alteration to be entertained.

A Middlesex Magistrate.

THE HOLIDAY QUESTION.

We have 365 days a year; 52 Sundays and 313 working-days,—six working-days to one Sunday. Taking these figures, a reverend divine has made a very sensible suggestion. He says that the 52 Sundays have been consecrated for a special purpose, in which we are all very specially interested; that, as we consist of body and soul, and both must be attended to in order that we may be altogether happy, the 52 Sundays must be considered as the soul's days, and the 313 working-days as the body's days. "But then," say some, "we are so terribly hard worked on the 313 days, that we cannot attend to our souls' affairs properly on the 52 days; therefore let us have some of the 52 days for the ease of our bodies." "No," says he, "that is bad logic. The 313 days are for the good of your bodies; not for the bad of your bodies. If you overwork your bodies on the 313 days, you are misusing these days." "But we cannot help ourselves," say they: "the 313 days are working-days, and we must work them out." "O! ho," says he, "that's your logic again. Now, if you cannot stand 313 days' hard work in the year, without being so overworked as to force you to rob your soul of some of the 52 days, you must work less than 313 days a year: you had better begin by turning 13 of these days into holidays. You will then have 52 days for your souls; 300 days to work for your bodies, and 13 days to let your bodies take their ease." I do not mean to say that these are Dr. Cumming's words; for he is a gentleman who is a great preacher, and, of course, likes to say things grandly: but this is the short of what he says, and very sensible it is. Why, on earth, are we to work ourselves to death in order to live? Why are we to overwork our bodies so as to hurt both them and our souls? Why are people in other countries to have week-day holidays and we to have none? Why are we to rob Peter to pay Paul? Why are our employers to force us to spoil our Sundays in order that they may get 311 days' work a year out of us,—that is, 313 days, less Christmas Day and Good Friday? Now, I am a very hard-working man, and I know what overwork is, and I know also the good of moderate work. I was lazy till 16; then I had five years' moderate work: when I came of age I was all the better for not having been overworked before I came to my strength. For nearly thirty years I have worked about as hard as any man in London, scarcely ever taking a holiday; but I find that it will not do to go on so. I am obliged to make holiday now,—to cut down my 311 days to less than 300. And if 311 days' work would be too much for me, who was not overworked when young, it must be far too much for those who had, as too many of our working men have had, some of their pith taken out of them while they were growing.

But many will say, "We cannot afford to give up 13 working days: what shall we do for wages?" That is all nonsense: if every man, woman, and child kept 13 holidays a year, we should all be as well off as now. You say, "A fair *day's* wage for a fair *day's* work:" try another cry, and say, "A fair *year's* wage for a fair *year's* work." If we all kept the 13 holidays we should get the same wages in the year as we do now. We could do more in 300 days, with 13 holidays to give us a spring every now and then, than we can do in the 313 days without the spring. Nothing is so bad for a horse as all collar-work: I have tooled a four-horse stage-coach in a hilly country in my younger days; and I well recollect how we went up a hill when we had just had a bit of down hill, with a hand gallop along the little bottom between the two. That is just what we want on our journey through this world,—a steady trot through 300 days, with a springing hand gallop on 13 days every here and there, and a quiet rest at the end of every one of the 52 stages.

N. R.

PROVINCIAL NEWS.

Alverstoke.—The following tenders were delivered on 2nd inst. for alterations and additions to the Alverstoke House of Industry, near Gosport, Mr. W. Pines, of Portsea, architect; quantities supplied:—

Rogers (Gosport)	£856	0	0
Willis and Senior (Gosport)...	787	16	0
Camwell Portsmouth)	761	0	0
Rapley (Gosport)	760	0	0
Smith (Portsea)	719	0	0
Bramble (Portsmouth)	713	0	0
Absalom Portsea)	688	0	0
Aylen (Portsea)	675	0	0
King (Portsea)	628	0	0
Callaway (Southsea)	613	11	0
Dotterell (Gosport, accepted)	580	0	0
Hodges (Portsea)	540	0	0
Davis (Southsea).....	523	0	0

Swansea.—The centre, or great point stone, of the entrance-gates of the dock works was laid, with some formality, but without public demonstration, on Tuesday in last week, by the mayor of the town and secretary of the dock company, Mr. G. G. Francis, F.S.A. The stone came from the Craigleith quarries near Edinburgh, and weighed seven tons. Under it were placed the various current coins of the realm, expressly obtained from the Bank of England, together with plans and detailed statement of the works, &c. The contractor, W. Pickering, and resident engineer, Mr. Neill, proved the levels to be correct.

Wallasey.—The local Board of Health have resolved to obtain plans and estimates of the best system for the general drainage and sewerage of the district; also, to obtain the opinions and estimates of competent engineers on the best and most economical water supply for the district. The chairman read a letter which he had prepared to be forwarded to Lord Shaftesbury, expressive of confidence in the General Board of Health, and testifying to their general courtesy and consideration whenever consulted

Grantham.—The waterworks company, established on the constant supply principle, has found difficulty, it is said, in providing its customers with even an intermittent supply. No cisterns are used. The question is asked whether the company, having failed in its contract, can compel payment for the water. The deficiency is attributed to a leakage in the earthenware pipes from the spring at Stroxton to the tank on the top of Spittlegate-hill. This conclusion is arrived at from a calculation showing that much less water flows from the pipes into the tank than enters them at the spring. As these pipes traverse a distance of four or five miles, and pass under corn-fields, the attempt to discover the leakage is regarded as almost hopeless.

Grimsby.—A discussion has recently taken place in the local Board of Health on the merits of a letter received from Mr. H. Austin, engineer to the late general board. Mr. Austin was of opinion that the waterworks, as proposed by Mr. Rendel, could not be carried out for less than 30,000*l.* and thought the proposed works perfectly unnecessary: he stated that a complete system of more suitable and more efficient works than those before the board could be carried out for the sum of 17,000*l.* It was at length determined to send a copy of the letter to Mr. Rendel, who, it is said, gave evidence in the House of Commons, when the private Act was obtained, and stated that these works could be carried out for 15,000*l.* Mr. Austin, on the other hand, states that at the present price of materials and labour, 30,000*l.* must be required to carry Mr. Rendel's plans out, and that a rate of 3s. in the pound will be required to meet the expenditure, or one-half as much more as the Act provides for.

Kelso.—At a recent meeting of the local police commission, reported in the *Kelso Chronicle*, the report and estimates of Mr. Brunlees, of Manchester, engineer, for the sewerage and water supply of the burgh, with the relative plans, sections, &c. were laid before the commissioners. The engineer proposed a system of sewerage with three outlets, at a cost of 3,500*l.* in all, exclusive of a manure tank (160*l.*) at the principal outlet, and from which he estimated that an annual profit of about 300*l.* would accrue. The principal sewers, he proposed, should be brick barrel culverts and rubble side walls and arch, and the minor sewers earthenware pipes. The water supply might be drawn from the Tweed by pumping, from West Broomlands by draining and pumping, or from Eden water about Stitchel Linn, on the gravitation principle. The last, though the most expensive to begin with, was recommended in preference to either of the others. A large reservoir near the Shoulder of Mutton would be also required. The cost of pipes and reservoir would be about 1,500*l.* The whole cost of supply would be 3,473*l.* and the annual charge of management, including interest of capital, the engineer estimated at 224*l.* The annual income would be 250*l.* and an annual profit of 26*l.* would result.

POLYTECHNIC INSTITUTION AND WORKMEN.

Among many sects it is thought from time to time advisable to have what are technically called revival meetings, when it is considered necessary, either from dormant zeal, or more enlarged views of usefulness, to give a fillip to a congregation. The latter course, we are pleased to see, was alone the object of the large gathering at this institution on Monday evening last, when an inaugural lecture was delivered by the Rev. Bath Power, principal of the Diocesan Schools of Norwich, on the Advantages of a Knowledge of Science, introductory to a course of Monday evening lectures, to which the industrial classes will be admitted at the reduced charge of 6d. each, the foremen of factories being provided with tickets, for distribution, giving the right of admission on these terms.

The world of London need not be told, that if a new discovery in science is made, either in Europe or America, they have not long to wait before all that can be known on the subject is brought before them in a popular shape, either by the present director, Mr. Pepper, or his worthy coadjutor as lecturer, Dr. Bachhoffner. The thousands who have from time to time received amusement and instruction at the Polytechnic, have now an additional pleasure to reflect upon, that is, that their contributions as admission fees will enable the director to afford to a wider circle the advantages of the institution; and if the reception afforded to the lecturer on Monday night, and the evident relish with which his remarks were listened to, afford any index to the *success* of the experiment, that end is a "fact accomplished."

THE NEW MUSEUMS, &c. TRINITY COLLEGE, DUBLIN.

I WAS not a little surprised on looking over your publication of last week to find in it a description of the new museums, &c. now in course of erection in Trinity College, Dublin, attributing to Messrs. Deane and Woodward the whole and sole direction of it. I was unwillingly obliged, on a former occasion, to appear in your columns in order to set the public right as to the truth of the circumstances connected with this building. How much the more does it grieve me now to be obliged again to appear in print to disabuse the minds of your readers respecting this building, which is now being erected, *on my plans and under my superintendence*, the elevations and external decorations being from the office of Messrs. Deane and Woodward. I must regret the temerity which has caused your informant to give so unfair and incorrect a statement to the public. I wish in no way whatever to appropriate to myself the portions of this building which have been designed by Messrs. Deane and Woodward, or rather (as the paragraph, in one case, correctly states) by the workmen; but while giving those gentlemen all merit for their portion of the edifice, I am quite as determined that the plans and internal arrangements which have been made by me, and to one line of which they have not the most remote title, shall not be put to the credit of the Messrs. Deane and Woodward.—JOHN MCCURDY. [It is due to ourselves to say that in the correspondence we had on the subject with the Messrs. Deane and Woodward, Mr. McCurdy's name was never mentioned, and that all the working drawings of the exterior, to which our illustrations refer, are signed by the first-named architects alone. This, it will be seen, is quite consistent with Mr. McCurdy's claim; but a little more candour, if that claim be correct, would have prevented misconstruction.]

DESTRUCTION OF MR. THOMAS CUBITT'S ESTABLISHMENT.

OUR readers, we are sure, will hear with great regret, that the establishment of Mr. Thomas Cubitt, at Millbank, which we have more than once noticed with special reference to its appliances for the advantage of his workmen, as well as for its many other improved and extensive arrangements, was destroyed by fire, on the night of Wednesday last. A want of water unfortunately paralyzed the exertions of the firemen, and the flames spread with wonderful rapidity, throwing a singular glare over the river and its opposite bank. It happened that we saw the outbreak of the fire, and in a space of time surprisingly short, it seemed as if a town were in a blaze. We shall but give expression to the feeling of all who know Mr. Cubitt, when we say that we sincerely sympathize with him, and hope that his loss personally may not be large.

Notices of Books.

The Gilbart Prize Essay on the Adaptation of Recent Discoveries and Inventions in Science and Art to the Purposes of Practical Banking. By GRANVILLE SHARP. Third edition. London: Groombridge and Sons. 1854.

WE have already noticed this essay with commendation. It now assumes the form and dimensions of a substantial volume, much matter having been added both to the essay itself and in the shape of an appendix containing a large collection of curious matter, such as engravings showing improvements and novelties in a multitude of instances, in any way capable of promoting the safety, convenience, healthfulness, or comfort of banking edifices, and even forms of envelopes, wax impressions of office seals of an improved description, &c. &c. Amongst the engravings, too, are portraits of Mr. Gilbart and Mr. Sharp.

In respect to arrangement of the work as it now appears, it may be a question whether it would not have been better to have sacrificed the original form of the prize essay to the acquirement of a more strictly methodical form and order of parts in the whole composition. This may yet be carried out in a succeeding edition, which will doubtless be called for.

VARIORUM.

THE August number of the *Ecclesiologist* contains a valuable paper on the Royal Monastery of Batalha, in Portuguese Estremadura, by the Rev. J. M. Neale, with an illustrative plan. Santa Maria da Victoria, at Batalha, is well known to us all by the work of James Murphy, to whom, probably, we are indebted for the preservation of the structure by the regard for it which he induced; but his views were published at a time when Christian art was little understood; and, according to Mr. Neale, "there are gross and absolute blunders in many of them, which it is wonderful that any professed architect could have made.——"The Travellers' (Shilling) Library" of Messrs. Longman and Co. still thrives and multiplies. No. 65 is on that very interesting modern Mahomet, "Schamyl, the Sultan, Warrior, and Prophet of the Caucasus," and is a translation from the German of Dr. F. Wagner and F. Bodenstedt, by Mr. Lascelles Wraxhall. No. 64 is a reprint, with corrections, from the "Geographical Dictionary," of McCulloch's "Treatise on Russia and Turkey;" and Nos. 65 and 66 form the first series, in two parts, of Laing's "Notes of a Traveller on the Social and Political State of France, Russia, Switzerland, Italy, and other parts of Europe during the present Century." All of these are well timed as well as interesting numbers of "The Traveller's Library."——Gilbert, of Paternoster-row, has just published a new edition of "Ince's Outlines of English History," for the use of schools. It is revised and considerably enlarged, though not increased in price.

Miscellanea.

OPENING OF THE BRIDGEWATER EXHIBITION.—On Saturday in week before last, Bridgewater was in complete holiday attire, and seems to have formed one great flower-show in the midst of a forest of firs. Triumphal arches spanned the thoroughfares at every main point, and the vessels in the river were dressed in flags. The occasion was the opening of the Exhibition of Paintings, Sculpture, Antiquities, &c. for behoof of the church restorations. The paintings were hung round, and completely over, the walls of the Nisi Prius Court; specimens of natural history, articles of virtu, medals, coins, autographs, &c. crowding every available space. In the centre of the court is a fountain, in which are a number of gold fish. The other court is filled with Parian statuary, jewellery, plate, bronzes, drapery, pottery, stained glass, and articles of a miscellaneous character. Every accessible part of the building—courts, halls, galleries, staircases, grand jury room, in which is held a bazaar—contains objects vieing with each other in attractiveness and beauty. At the opening, the galleries were filled with a brilliant assemblage of ladies. The Choral Society were present, and the vicar read an address to the mayor on the objects of the Exhibition, and its origin and progress. Now that so good an idea has been so successfully inaugurated, it is to be hoped that due justice will be done to it and its excellent purpose by a crowded and continued attendance. The management ought to be able very handsomely to complete and decorate the church with the proceeds.

THE HACKNEY BROOK.—A deputation to Lord Palmerston from Stoke Newington, Kingsland, West Hackney, Stamford-hill, &c. on Wednesday in last week, represented to his lordship the necessity of having the noxious open sewer in that district built over through the parish of Stoke Newington. The cost, it was stated, would be about 20,000*l*. Lord Palmerston, after listening attentively to what was urged, expressed his strong interest in the subject, and advised the deputation to repeat their application on the reassembling of Parliament, in February next, or it might be in November preceding, as the Sewers Commission were not in a position to be able to do what was required previous to that time, and as there would then be fresh arrangements. Meantime, he assured the deputation that the matter would not escape his attention. There may be serious results before that time comes.

AUGHNACLOY (IRELAND).—The Jackson's Almhouse, which stands in a commanding situation at one end of the town, was opened on the 10th ult. The building is of the Late Tudor period, from the design of Mr. S. Symes, of Dublin, architect, and is executed in the sandstone of the neighbourhood, laid in random courses, having wrought-stone dressing, together with bold projecting eaves and ornamental gables. It contains fourteen sitting-rooms, with chambers over same, to which are added baths and wash-houses for the male and female departments, together with a room for the committee or general purposes. The grounds are laid out in terraces and slopes. This almshouse for unfortunate persons 50 years of age, was built and endowed under the bequest of the late Mr. Alexander Jackson, M.D. of Dublin, who left for this object the sum of 10,000*l*. Aughnacloy was the birthplace of Dr. Jackson.

ARCHÆOLOGICAL MATTERS.—The archæologists of Royston have just discovered under the heath near Cambridge, numerous passages, chiefly of a circular form, about 2 feet in width, and at the depth of about 6 feet from the surface, surrounding central blocks of chalk, also perforated into chambers or grottoes. From the circular passages others diverge, and several have been traced into a trench. In the principal passages, surrounding one of the central blocks, may be seen *columbaria*, resembling the ancient catacombs of Rome. In the grottoes beneath this block was found a Roman urn. Fragments of ancient British ware have also been found.——A stone with a Roman inscription has lately been turned up at Irchester. This inscription, it seems, has puzzled many, but on being referred to Mr. Roach Smith, it was soon deciphered. It appears thus on the stone:—

D. M. S.
AMICIVS · SATVRV
STRATOR COS · M · S · F

Mr. Smith says it is as follows:—

Diis Manibus Sacrum. Amicius Saturus Strator Consulis Monumentum Sibi Fecit.

——The opening of the ancient barrow on Gallibury Down, Isle of Wight, has commenced; but, from its dimensions and height, the large number of workmen employed had made but little progress at the end of the first day. It is composed of hundreds of loads of rough flints, with merely a covering of earth and turf about a foot thick.——On Thursday in last week an excursion took place under the direction of the Bedfordshire Archæological Society. The company met at Cranfield, where they were conducted to the church, which is dedicated to St. Peter and St. Paul. Mr. Langstone exhibited a quantity of Roman, Mediæval, and later coins found in the parish. The company next proceeded to Marston Moretaine. This church contains many objects of interest. It is dedicated to St. Mary. The visitors next drove on to Wootton Church, which is also dedicated to St. Mary. They then proceeded to Kempston Bury, first visiting the old mansion-house formerly belonging to Sir Wm. Long, and lately purchased by Mr. Talbot Barnard. Thence they proceeded to the church. Afterwards Mr. and Mrs. Talbot Barnard's invitation to the Hoo was accepted. Here a collation awaited them as a termination to the proceedings, and to which a party of upwards of forty sat down.

THE CHEMISTS AND THE EARLY CLOSING ASSOCIATION.—A meeting of metropolitan chemists' and druggists' assistants was held at the Freemasons' Tavern on Tuesday in last week, when measures were resolved on for closing the chemists' and druggists' shops at eight p.m. on week-days, and on Sunday throughout. A pamphlet is to be prepared, containing a plain statement of the grievances of this very hard-worked and meritorious class of the community, whose vigilance in the distribution of drugs to the public really absolutely requires that their attention should not be exhausted by long hours of labour, even out of mere regard to the safety of the public itself, were it for no other reason. It is urged, and it appears will be shown from statistics, that the purposes for which their services are required on Sundays, and after eight p.m. on week-days, have very little to do with the health of the public. Having taken a part in originating the early closing movement, we shall learn with pleasure that the chemists' and druggists' assistants have succeeded in their endeavour. A meeting of their employers, we understand, will shortly be held in favour of the movement.

NEW PIER AT BLACKFRIARS BRIDGE.—Workmen are driving piles on the south side of Blackfriars Bridge, for a landing pier, 200 feet long and 6 feet wide. The new pier is to be named "The Royal Surrey Watermen's Pier."

SHAM BUILDING.—A walk to Pall-mall just now would be most instructive to any one who would judge of the fitness and *truthfulness* of the *style* and *mode* of building now adopted, for there a respectable brick building or "core" may be seen, which might speak well for itself if allowed to do so, but in its present state it seems to imply that the *architectural character* of the work is yet to come,—sundry props and other like things doing the work hereafter to be done by finely polished columns of granite or porphyry. It would be very satisfactory if the architect or building committee would or could inform the public what use, advantage, or beauty is sought for in this net-work or casing of columns and cornices, that for the present do not either carry themselves or each other much less the main building: they really never will or can be anything else than a very expensive and ornamental packing case or crate framed about the solid package within, which, though perhaps good in itself, is not allowed to be seen. Can anything prove more thoroughly the falsity and unfitness of our style of building as thus practised.

NON NOBIS.

Strike of Crown Glassmakers.—Shields, August 12: The crown glassmakers of the Tyne and Wear are on strike. More than twelve months ago an arrangement was come to between the masters and men, that in case of a rise in glass the men should have a proportionate advance, and if prices should fall, the men should allow wages to come down. Until within the past two or three months the crown glass trade has been brisk, but in consequence of a stagnation in the building trade, the glass manufacturers have considerable stocks on hand, and about a fortnight ago they gave notice to the men of their intention to reduce their wages 6d. per 100 tables. The men, however, instead of complying with the reasonable request of the masters, have struck work, and in one house disgracefully left eight pots of metal unwrought. Like most workmen's strikes, this one is ill-advised and ill-chosen. For some years past sheet glass has been gradually superseding crown in the market, and this strike will, of course, further injure it. The sheet glass trade is very brisk, and the manufacturers can dispose of as much as they can make.—*Times*.

Iron Manufacture.—Mr. H. Brownentt, of Liverpool, has patented a method of treating scrap and waste iron so as to render the same more readily available in the manufacture of iron. The inventor takes scrap and waste iron, and collects it together in a box, frame, or binder, and submits it to great pressure, thus forming blocks or masses convenient for stowage and carriage.

Open Spaces.—There is an article in the *Law Review* for the present month titled "Where shall the New Law Courts be built?" The author objects strongly, on sanitary grounds, as we do, to the occupation of Lincoln's-inn-fields, and advocates the site proposed by Mr. M. D. Hill, between Bell-yard and Clement's-inn, and recommended by Sir C. Barry in preference to the Fields. As truly observed by the writer, —"Take Lincoln's-inn-fields and you create a nuisance: take the Strand site and you destroy one"—and what is more, convert a positive nuisance into a comparative benefit, even though still to be so far occupied by buildings. The advocates of Lincoln's-inn-fields site are still, it seems, bent on their project. We must urge, therefore, more than ever, the necessity of carefully and jealously preserving it amongst our few remaining open spaces.

Boston Corn Exchange and Athenæum Competition.—Fifteen designs for this building have been received. We understand three have been selected for final discussion, bearing respectively the signatures of "Fides," "Fidelitas," and "London."

A Willow Dock.—Such a dock is now being built at La Crosse, Michigan. It is constructed entirely of willow twigs, about 12 feet long, bound in bundles 1 foot thick, which are so ingeniously arranged and woven together that it is impossible for sand to work out or the water to work in. Each bundle contains about 100 small trees, and it will take 50,000 of these bundles to complete the work. It is said that the willows will sprout and grow, rooting firmly together, thereby forming a living superstructure which will last for ages without the least tendency to decay. Docks like these occur very frequently on the banks of the Rhine in Germany.

"The Wiltshire Archæological and Natural History Society" announces its first anniversary meeting at Salisbury on the 13th of September, under the presidency of the Right Hon. Sidney Herbert, whose fine mansion of Wilton House, with its interesting galleries of art and literature, will be freely opened to the members one day. The unique cathedral, the bishop's palace, ancient churches, and domestic buildings in the city, with Old Sarum, Salisbury plain, with its almost countless castrometations, barrows, and British earthworks; and lastly, the wonder and mystery, *Stonehenge*, will afford abundant objects for amusement, study, and reflection to the members and visitors.

Banbury.—I was truly sorry, on visiting Banbury, Oxon, yesterday, to see that they were about to pull down the old gaol, a building in good order, with walls above 4 feet in thickness. It is a great pity, being one of the few (remaining) old buildings in Banbury; one where many a Cavalier and Roundhead by turns have been confined. Do try and avert its doom.—H. K.

St. John's Church, Lowestoft.—With reference to a notice of the opening of this church, which appeared in our journal lately, we have received statements from Mr. John Brown, whose design was originally accepted, and Mr. Lacey, the builder who sent in the lowest tender for the execution of that design, complaining, singly, of the course which was pursued towards them, and reflecting on the conduct of those by whom the church has been erected. The architect, they state, was the clerk of the builders, and the builders, at least one of the firm, were on the committee for obtaining designs, and erecting the church.

Telegraphic Progress.—The British Telegraph Company has completed an arrangement with the Europeau, by which the two become one, under the former title. The purchase has been effected by the payment of 100,000*l.* in shares of the British, and 30,000*l.* in cash. The public are interested in this arrangement, as a more complete system of communication is established with more moderate charges, which, in some instances, amount to as much as one hundred per cent. on the cost of a message, besides which the fee for porterage is abolished, and the number of words contained in names and addresses are no longer subject to charge.——The project of connecting, telegraphically, Great Britain with America is still, it would appear, seriously engaging the attention of scientific and commercial men. Daring engineers are sanguine of the practicability of laying a submarine cable directly across the Atlantic, from Galway to Cape Race, in Newfoundland. The chief question is, whether, if a line were laid, an electric current can be passed through three thousand miles of cables? Professor Faraday and others, as we have already noted, believe that it could not. Hence the greater number of scientific men are said to favour the route to America *vid* Scotland. "To escape the at present dubious ocean path," says a writer in the *Quarterly Review*, "it is proposed to carry the cable from the northernmost point of the Highlands of Scotland to Iceland, by way of the Orkney, Shetland, and Ferroe Islands—to lay it from Iceland across to the nearest point in Greenland, thence down the coast to Cape Farewell, where the cable would again take to the water, span Davis' Straits, and make right away across Labrador and Upper Canada to Quebec. In no part would the cable require to be more than 900 miles long; and as a sand bank seems to extend to Cape Farewell, there would be little difficulty in mooring to a level and soft bottom. The only obstacle that we see is the strong partiality of the Esquimaux for old iron. The mere expense of making and laying the cable would not be much more than double that of building the new Westminster-bridge." Another obstacle besides the Esquimaux seems to have been as yet overlooked, except by ourselves, namely, the dragging influence of icebergs from the Arctic regions, which frequently plough up the bottom of the ocean, and must inevitably cross the path of the proposed telegraph *vid* Iceland and Davis' Straits.

Exhibition of the Belfast Fine Art Society.—We are glad to hear that the modern works of art lately exhibited at Belfast have sold well. The paintings were numerous, and a good many have been sold at prices ranging from 73*l.* 10s. downwards. Amongst those sold we may note a few, such as G. E. Herring's "Gulf of Spezzia," A. G. Woolmer's "Birds' Nest," T. Lound's "Pembrokeshire Coast," Fanny Geef's "Meditation," G. Bonavia's "Enfans Egarés," C. L. Nursey's "Muslin Sewer," C. Springer's "View in Groenlo," G. Stubbs's "From Market," E. G. Müller's "Santa Maria della Salute, with the Dogana, Venice," &c. &c. The success in effecting sales appears to have been much greater than could have been anticipated.

Aylesbury Church.—Observing in your last number a statement (from a local paper), highly prejudicial to the contractor for the execution of the fittings in Aylesbury Church, I beg to give at once my opinion that the statement is unfounded, and has arisen from the miserable jealousy of unsuccessful candidates for the work. I have reason to believe that the material is excellent, and of the quality specified.—Geo. Gilbert Scott.

New Parks in the Metropolis. — A parliamentary paper just issued, shows the amount contributed by the public to each of the new parks. Primrose-hill: purchase-money, 23,442*l.* defrayed out of land revenues of the Crown in 1842: expense of enclosure and bridges, 3,205*l.* 17s. 11d. Kensington: given by Duchy of Cornwall: expense of formation estimated at 3,554*l.* 19s. 7d. of which 720*l.* raised by local contributions. Victoria: cost 129,718*l.* 2s. 9d. of which 115,683*l.* 14s. 4d. produce of sale of York House: remainder defrayed out of land revenues of Crown: annual expense of maintenance, 2,000*l.* of which about 500*l.* from grazing rents, and remainder voted by Parliament. Battersea: cost up to 31st March, 1854, 222,079*l.* 6s. 5d. of which 200,000*l.* advanced by Public Works Loan Commissioners, and remainder voted by Parliament: about one-half of land purchased to be appropriated as building ground towards defraying cost.

Quicklime in Scotland.—A large mountain, Zore-More, near Applecross, on the west coast, on being accidentally excavated, presented a substratum of pure quicklime, within 5 feet of the surface; and by a further excavation, it was ascertained that the whole mountain, except an average surface of 20 feet, consists of lime fit for building or agricultural purposes. On the summit volcanic remains have been found.

The Plate-Glass Insurance Company.—A general meeting of shareholders was held on Wednesday in last week, when it was stated that it had been found necessary to extend the guarantee of plate-glass insurance to the provinces, as well as to Scotland and Ireland; that in one week 17,500 shares in the Plate-glass Universal Insurance Company were subscribed for; and that that company would now assume the direction of affairs. A dividend of 10 per cent. per annum was declared. The statement of accounts showed on the debtor side an amount (including 614*l.* 11s. 8d. surplus) of 2,290*l.* 2s. 4d. and on the credit side (including 529*l.* 14s. 6d. balance at bankers and in hand) a like amount. The chairman observed that the success of the undertaking had far exceeded their most sanguine expectations, and was rapidly increasing. The report was unanimously adopted.

The National Armoury at the Tower.—Having on several occasions exposed the mismanagement of the national collection of armoury at the Tower, we may add to what has already been said that in the quarterly "Journal of the British Archæological Association," printed for the Association (by Richards of Great Queen-street), we find the following statement, in an article, by Mr. Planché, "On English Helmets," in reference to French purchases:—"The plate accompanying this paper gives to the public a *second series* of helmets, of the principal forms from the fifteenth up to the twelfth century, all drawn from the originals discovered in this country! Alas, that so many should have been suffered to leave it; that we must seek in the *Musée d'Artillerie*, at Paris, for such unique specimens of the armour of our ancestors! I have just returned from an inspection of that interesting and finely-kept collection, and can safely declare that the majority of the rarer examples of helmets contained in it has been obtained from England at four and five times the sums offered by the parties to whom is entrusted the conservation and management of our national armoury."

Great Bridge in Canada.—A letter from Montreal, July 24, says—"The preparations for receiving the first stone of the Montreal Victoria Tubular Bridge—the connecting link between the Far West and the Atlantic seaboard—have been completed. Mr. Hodges is the manager of the affairs of the contractors.

Statues of Lord President Boyle and Lord Jeffrey.—Permission of Government is said to have been obtained for placing these statues in the recesses formerly used as Lord Ordinaries' Courts, on the East side of the Outer House of the Court of Session at Edinburgh. Lord Jeffrey's statue will probably be placed in its position before the meeting of the court in November.

Ancient Remains at Gloucester.—During the sewerage excavations in Westgate-street, the workmen came upon a part of the foundations either of Holy Trinity Church, removed about a century and a half ago, or of its tower. A stone ring, which is supposed to have once formed the upper part of the font, also turned up. In laying down the drainage-pipes in some of the streets where a deep cutting is necessary, a tunnel has been made with openings at short intervals. This plan of carrying on the works has been adopted in Longsmith-street; and while working in one of these headings, the excavators came upon the corner of a Roman tesselated pavement, in excellent preservation. Another tesselated pavement was found in the same street, about 20 feet from that first discovered, and 10 feet from the surface. An encaustic tile floor is spoken of as having been discovered in Westgate-street.

TENDERS

For the erection of national schools and teachers' residences, in the parish of Charles, Plymouth. Mr. W. Damant, architect. Quantities supplied by Mr. R. Elliott:—

J. Hicks	£5,610 15 3
W. Roberts	4,944 0 0
J. Matcham	4,900 0 0
W. H. Pethick	4,857 16 4
J. Marshall	4,600 0 0

TO CORRESPONDENTS.

"On the Present State of Taste."—We are forced to postpone the completion of Sir Gardner Wilkinson's papers.

"City Cemetery Tenders."—The second tender for the enclosure of new City cemetery was from Mr. Gerish, not Gent.

"F. and W." "E. L. C." "W. S. I." "T. R." "H. R. L." "J. B." "G." "H. S. B." "An Architect." "O. H. H." "F. P." "D. M." (declined with thanks), "J. V." (we cannot assist), "F. P." (there is no method that can be depended on). "F. T." (the total cost of St. Paul's, including the railing, was 747,954*l.*)

"*Books and Addresses.*"—We have not time to point out books or find addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the Editor, and not to the Publisher.

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

A SURVEYING ENGINEER and LAND AGENT, of good practice, wishes to take an ARTICLED PUPIL, who would be one among the family, and treated as a member of the family. Terms and particulars may be known on application to Mr LEVER-EDGE, Taunton, Somerset.

WANTED, a FOREMAN of MASONS, for general work.—Apply, by letter (post-paid), stating where previously employed, and amount of salary expected, to A. B. C. Office of "The Builder."

WANTED, a respectable Lad, as an APPRENTICE to a CARPENTER and JOINER.—Apply at 20, Charlton-place, Islington.—A small premium will be required.

WANTED, a BUILDER'S CLERK, accustomed to the usual routine of the office. Early hours expected. Address, by letter only, stating terms and where last employed, to A. B. 139, Leadenhall-street, City.

TO PAINTERS AND GRAINERS.

WANTED, EMPLOYMENT, or a situation as PLAIN WRITER and GRAINER. Address to B. Painter, 3, Brighton place, Halsing-road, Croydon.

TO CEMETERY COMPANIES, MASONS, &c.

THE Advertiser, a Young Man (age 26) who has had considerable practice in LETTER CUTTING, wishes to obtain EMPLOYMENT at a Cemetery or elsewhere.—Address, WILLIAM DIBLEY, Rock terrace, Higher Tranmere, near Birkenhead, Cheshire.

TO PLUMBERS AND BUILDERS.

THE Advertiser, a respectable young Man, aged 21 years, is desirous of further IMPROVEMENT in the Plumbing. Wages no object.—Address W. N. 7, George-street, Finsbury-place.

TO BUILDERS AND MASTER PAINTERS.

THE Advertiser, a respectable Married Man, is seeking a SITUATION as FOREMAN or otherwise. No objection to town or country.—Address, B. B. at the Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, aged 20, is desirous of obtaining an ENGAGEMENT in an ARCHITECT'S OFFICE. Is a good draughtsman (mechanical and ornamental), understands perspective &c but not being conversant with the routine of an office, would accept a small salary at first.—Address, T. A Mr Archer's 89, Cable-street, Wellclose-square.

TO BUILDERS MASTERS, CARPENTERS, HOUSE-AGENTS, AND OTHERS.

THE Advertiser, a Middle-aged Man, a bricklayer, wishes for PARTICULAR EMPLOYMENT; has a thorough knowledge of building, jobbing, fire work, &c.; would take work at a price if required. No objection to a time-keeper's place, or otherwise.—Address, A. B. 27, Edith street, Great Cambridge-street, Hackney-road.

TO CARPENTERS AND BUILDERS.

THE Friends of a respectable Youth, age 16, strong and active, are desirous to APPRENTICE him for 3, 4, or 5 years, where he could board with the family. He has been for some time a pupil at Marlborough-house, and possesses considerable ability in drawing. Price 5l. M. 1, Cullum-street, Fenchurch street, London. References will be given and required.

PLUMB No. &c.

THE Advertiser, having some surplus labour which he is desirous of employing, is desirous of TENDERING for any quantity of PLUMBING or PAINTING in town or country, with or without materials. Any party requiring work done will find this worthy their notice.—Address, F. S. 10, Dorset-street, Portman-square, London.

TIMBER TRADE. — The Advertiser is desirous of a RE-ENGAGEMENT, as either Clerk, Traveller, Manager's Assistant, or otherwise. Well acquainted with the trade. References and security. Address, ZERO, Post office, Wolverhampton.

THE Advertiser (age 24), a good Draughtsman, and of active business habits, wishes to obtain a SITUATION in a Builder's or Contractor's Office, or as Assistant Clerk of Works. He has been seven years with an architect and surveyor of high standing, and is accustomed to builders' accounts. Salary moderate.—Address, J. B. C. 32, Bridges-street, Covent-garden.

BUILDERS or Others requiring an experienced active person with an incumbrance, of respectability, integrity, and a desire to promote the interest of an employer, as Representative, Clerk of Works, &c. can address for an interview to A. JAMES, 17, Kinsland-road, near Shoreditch Church, London. Weekly salary two guineas.

TO ENGINEERS, ARCHITECTS AND SURVEYORS.

A YOUNG GENTLEMAN, accustomed to the routine of an architect's office, is desirous of obtaining a SITUATION in any of the above offices. Is an excellent draughtsman, and can give good references. Address Y. Z. Mr. Wilson's, 11, Royal Exchange.

TO ARCHITECTS

A YOUNG ARCHITECT is desirous of an ENGAGEMENT as DRAUGHTSMAN London preferred. Most satisfactory references can be given. Address, O. N. Office of "the Builder."

TO ARCHITECTS, ENGINEERS, AND ESTATE-HOLDERS.

A GENTLEMAN, of varied and extensive acquirements, having been engaged under eminent architects in the north, and for some time in the south of England, whose present engagement is about to expire, is desirous of a responsible SITUATION at home or abroad, either to take charge of works on an estate or the direction of an office. He is competent to prepare perspective, fair and working drawings, specifications, take out quantities, inspect and measure off works, prepare accounts, and to execute surveying and levelling, &c. and is acquainted with general routine of business. Salary, 200l. Testimonials first class.—Address, X. X. X. Post-office, Reading.

TO ARCHITECTS, BUILDERS, &c.

A YOUNG MAN, who is a good and rapid draughtsman, accustomed to measuring works, taking out quantities, preparing estimates, and the usual duties of an architect's or builder's office, is desirous of a PERMANENT SITUATION.—Address L. B. care of Mr. William st, Chemist, &c. 83, High-street, Borough.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who is a good draughtsman and designer, and has a knowledge of specifications, quantities, perspective drawing, and colouring, is desirous of a RE-ENGAGEMENT in London. He is also an expeditious land surveyor, &c. Good references.—Address O. M. Pouten's Newspaper-office, 66, Cannon street.

TO BUILDERS AND OTHERS.

A YOUNG MAN, a Carpenter, with a knowledge of stair work, wishes for CONSTANT WORK either as Carpenter or Time keeper. Wages not such an object as constant employment. Address W. H. C. 3, Thorahill-bridge-place, Caledonian-road, King's-cross.

ARCHITECTURE AND SURVEYING.

A GENTLEMAN of some years' practice in the above profession in one of the principal towns of the midland counties, is desirous of meeting with an ENGAGEMENT in London either as Managing Clerk or Working Partner for a term of years. First-class references will be given and required.—Address C. D. 25, Upper Southwick street, Hyde park.

TO BUILDERS AND SMITHS.

A YOUNG MAN, that has had good practice in Iron Railing, Balcony, Verandah, Staircase or Step work, wishes for a JOB in the above line, or has no objection to take a large Job, to find labour only, in town or country.—Apply (prepaid), to S. C. Dolling's Library, 47, North-street, Walworth.

A BUILDER and CONTRACTOR'S CLERK, several years in his last situation, is open to a RE-ENGAGEMENT.—Address, R. A. 22, Beaconton-street, Caledonian-road, London. No objection to the country.

A RESPECTABLE MIDDLE-AGED MAN, who has been in a builder's office twenty years, wishes for a PERMANENT SITUATION: is well acquainted with all the routine of the office, and can give most satisfactory references.—Address G. W. D. 30, Hatfield street, Blackfriars road.

TO ARCHITECTS, &c.

AN ASSISTANT is desirous of a SITUATION in an Office or on Works.—Address to E. F. Mrs. Phillips, No. 6, Artes-sa., Jane, Richmon l-road, Bayswater.

A PRACTICAL MAN, with some knowledge of land surveying, competent to prepare complete sets of architectural drawings, can measure, &c. wishes for a SITUATION as SUPERINTENDENT on an Estate, or Clerk of Works, or Assistant to an Architect or Surveyor.—Address, ALPHA, No 4, Carthusian-street, Charterhouse-square. N.B. Good references.

TO CONSULTING and RESIDENT ENGINEERS employed in the construction or superintendence of Railway, Government, or other Works.

A MILITARY OFFICER wishes to place his Son as a PUPIL with a gentleman to learn the profession practically. A liberal premium will be given.—Direct to H. 31, Piccadilly. No objection to the continent.

TO IRONMONGERS AND BUILDERS.

A BELLHANGER, a sober, steady workman, of considerable experience, aged 34, wishes for an ENGAGEMENT. The Advertiser also understands preparing and hanging bells, and is a good locksmith.—Address, W. WILLIAMS, Mr. F. R. Shelley's, 15, Upper Russell-street, Brighton, Sussex.

DREDGING MACHINE and TUG-BOATS. WANTED to PURCHASE a good DREDGING MACHINE, either with or without Pontoons, and TWO small steam TUG-BOATS.—Application, stating price and particulars to be made to JAMES RAMSDEN, Esq. Barrow Harbour Office, Ulverstone, Lancashire.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Publishers supplied with the necessary and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 30, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

IMPORTANT TO BUILDERS AND OTHERS.

CONSERVATIVE LAND SOCIETY. ADVANCES upon buildings erected on the value of estates will be made in the following manner:—The whole of the amount of loan will be advanced without any deduction whatever, and the interest, the costs of mortgage, release, and surveyor's fees for approval of plans and surveys, included in the monthly repayments. One-half the cost up to that time advanced when building is roofed in, and two-thirds of the total cost when building is completed. The monthly repayments after the balance of mortgage supposed to be paid off in the preceding example at the end of twelve months, amounting to 18l. 11s. 4d. may be paid off by monthly instalments of 3l. 1s. extending over sixty years. The sale therefore, of a house, as in the above example, is materially facilitated; for supposing the purchase money 300l. the mortgage due to the society 180l. 11s. 4d. may be transferred at a cost of 38s. and thus the purchaser is only required to produce 121l. 8s. 8d. at time of purchase. According to ordinary practice, when the money is lent through a solicitor to a builder, the mortgage money is called in upon sale or transfer. Builders, by becoming members and taking allotments, may build upon their own freeholds, and seven-eighths of the purchase-money of the land may remain on mortgage. Advances only made to members qualified by rights of choice on terms and conditions to be had at the office. Shares of 50l. paid up in full, with the fees, 52s. 6d. 6d. bear interest at 3 per cent.; entitle members to immediate rights of choice to land in any of the estates; and enable a member to borrow, for building purposes, 50l. in addition to the 50l. paid on a completed share.

CHARLES LEWIS GRUNEISEN,
33, Norfolk-street, Strand, 17th August, 1854.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,..... }

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior paint, instead of a superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO., when ground and dry, by Messrs T. B. MORLEY and CO., and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use on application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 7s. 10s and 21s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, uncharcoable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Blue, for all kinds of outside work, barges, park railings, &c. 2s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 100 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 3, Wellington-street Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Lancaston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innoxious substitute for White Lead to shippers and the trade, either in powder or paste, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they confidently believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality in a degree seldom never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combines with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office (New Wharf, Abingdon-street), Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increased demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering pure sets, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties: that it is not affected by frost, and does not re-state in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf-walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of this description. It is also particularly adapted for stucco. Orders received by 13, London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West India Docks Station, and sold at No. 1, Pratt-street, Paddington-basin where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian reliefs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

ENCAUSTIC TILE PAVEMENTS. MAW and CO. BENTHALL WORKS, BROSELEY, Salop, manufacturers of the Cloister Pavement of Mediæval Court, and

THE SUCCESSFUL IMITATION OF OPY'S ALEXANDRINUM,

in the beautiful ENCAUSTIC TILE PAVEMENT of CLOISTERS of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, Esq. in Official "Hand Book"), forward without charge, designs and estimates adapted to any given dimensions of Entrance-halls, Conservatories, Verandahs, &c. in every style.

Specimens at 11, Aldersgate-street, London.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour.—Address, Mr. WM. WEBB, Brick-fields, Stoke Newington.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 2, Portland-street, Southampton.—Illustrated list of prices or samples forwarded on application.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 23s. at WARD'S OLD-ESTABLISHED LONDON STOCK WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Best Malting and Copper-dyeing perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICKFIELD TO BE LET or SOLD (the Freehold), in full work; makes a good stock brick, which sells well in Brixton, Streatham, Norwood, Croydon, &c. Large washing, office, and cottage on the ground. Apply to Mr. WM. COOK, Lorrimore-square, near the New Church, Surrey Zoological Gardens.

TO BE LET or SOLD, a BRICKFIELD, now in full work, well situated, within a few miles of London. Lease, 99 years.—For particulars apply by letter to HUNT and CO. Printers, High-street, Ilow, Middlesex.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

Assurances with at profits at reduced rates.

Any information respecting either Fire or Life Insurance, with prospectuses, forms of application, may be obtained on application at the Office.

W. M. BROWNE, Secretary and Actuary.

Agents required in the principal Country Towns.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. —In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, though it will eat lead through, in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purpose it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES GILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD STREET, LONDON, conducted in connexion with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

WINDOW GLASS.—GREAT EASTERN DEPOT.—H. PAGES, 195, Whitechapel-road:—

Price of Crates, CCC ..... 39s.
" " CC ..... 38s.
" " 4th ..... 42s.
16 oz. gold sheet, 2½d per foot per crate.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 20, SOHO SQUARE.

Railways, roads, water-works, &c. planned, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs, prepared and executed. Estates, manors, parishes, and townships surveyed and mapped. Land, timber, buildings, &c measured and valued.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING. Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform gentlemen desirous of acquiring a thorough practical knowledge of the profession, that they have added up their OFFICES with every requisite, including models and instruments of every description. The COURSES are all remodelled and enlarged, embracing all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING OFFICES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen. Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms One Guinea per Quarter. For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's-park.

CRYSTAL PALACE.—DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artistic Decorators to his Majesty the King of Hanover, and executors of the Byzantine Court, the Irish Court, the Frieze in the Renaissance, and the centre portion of the Italian Courts, Crystal Palace, Sydenham, most respectfully beg to inform the nobility and gentry that they have removed from 20, Piccadilly, and have considerably increased their establishment.—Address, BEENSEN and KUCKUCK, 58, Pall-mall, London.

ECCLESIASTICAL DECORATIONS.—A. O. P. HARRISON, Heraldic and Mediæval Artist Gothic Writer, &c. 30, Great Titchfield-street, Portland-place.

TO PAINTERS AND BUILDERS.

MORGAN and CO. Oil Grainers to the Trade, 7, James-street, Goswell-road, London, in a superior style, and with despatch.

LIST OF PRICES IN TOWN:—

Walnut	1s. 6d. per yard.
Maple	10d. "
Satin Wood or Mahogany	8d. "
Oak	3d. "
Marbles	3d. per foot.

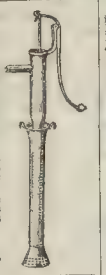
Country orders punctually attended to.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,



which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slides and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump, for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and not galvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

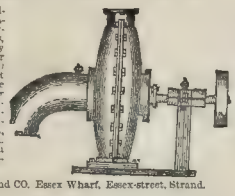
A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.



Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids to drain or to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse-shafts complete. Strong 5-nuple, for immediate use several are ready for delivery, from 6-horse power to twenty-five-horse power and upwards, adapted for contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALL'S, Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

TO WATER COMPANIES AND PLUMBERS.

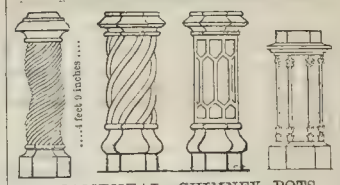
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with self-acting valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE sold to Builders upon the lowest terms. Marquees and temporary awnings made to order, per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.



C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of painters' oils, turpentine, driers, &c. &c. ground in oil, white-lead, oils, colours, &c. &c. PRICE CURRENT GIVEN for OLD LEAD. GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

FOR SALE, a SET of THREE DRY-LIME PURIFIERS, with central valve, &c. complete, capable of purifying 250 000 cubic feet of gas per day, and a SET of EXHAUSTERS of the same power. Also, a quantity of serviceable 4-inch arc. pipes, ascension-pipes, sockets, bends, and double-flange pieces, adapted for a complete setting, with D retort, mouth-pieces, lids, and cans. May be seen on application to the Engineer, at the London Gasworks, Vauxhall; and offers to be addressed to the Secretary, at No 26, Southampton-street, Strand.

GOODYEAR'S VULCANIZED RUBBER.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

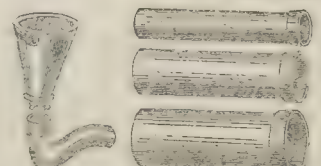
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1849.



GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

Marble had also at Messrs. GADDESDEN'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, Cornwall Wharf, City Basin; Beckhead, Bermondsey, Dover's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town, LUDWIN, South Wharf, Broad-street, Paddington; COLWILL, Brothers, 33, Bryanston-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

THE SUPERIORITY OF JENNINGS'S CLOSETS ARE NOW GENERALLY ACKNOWLEDGED.

THEY ARE TO BE FOUND IN NEARLY EVERY HOSPITAL, ASYLUM, AND UNION THROUGHOUT THE UNITED KINGDOM.

They are IMPERISHABLE in their material, free from all complication, save the Lead-trap, displace no impure air, are as easily understood and fixed as a Cock to a sink, are cleaner and more efficient than any closet before the public.

As a proof of their efficiency, one fact will suffice. Nearly three years since THIRTY-SIX of these Closets were fixed in GUY'S HOSPITAL, since then TWENTY more have been introduced, and their action has been so satisfactory, that H. CURRY, Esq. the Architect to ST. THOMAS'S HOSPITAL, has just introduced them throughout that building, as also JENNINGS'S LAVATORIES, URINALS, &c.

THE ROYAL APARTMENTS OF THE CRYSTAL PALACE ARE FITTED WITH THESE CLOSETS,

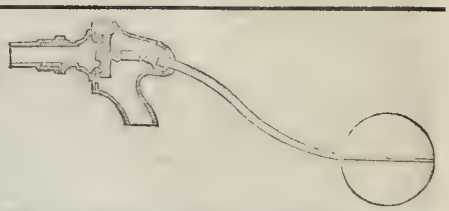
And Architects will find on inspection that they are fit for the MANSION or COTTAGE.

To prevent Cholera and Fever, all Drains should be properly trapped.

JENNINGS'S TRAPS

Will be found to work without stopping up, and the removal of the grating does not affect the principle of the Trap.

JENNINGS'S PATENT SHOP-SHUTTER SHOES SHOE AND SECURE SHOP SHUTTERS AT HALF THE COST OF THE TROUBLESOME AND DESTRUCTIVE SHUTTER-BAR.



A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

G. JENNINGS solicits an inspection of his

NEW DRAIN-PIPES AND CONNECTIONS.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of closing against the column of water when most required, and are warranted to stand any known pressure of water.

	½	¾	1	1¼	1 inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 6d.	7s. 3d.	12s. 6d. each.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 3d.	14s. 6d. each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that there are correct prices for inserting in specifications.

THE BUILDER.

SALES BY AUCTION.

TO ENGINEERS, IRON STEAM SHIP BUILDERS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by Messrs Samuda Brothers (who are discontinuing their works at their iron ship building establishment at Poplar) to DISPOSE BY by Private Contract the very complete ENGINEERING WORKS, and Boiler Making Plant, including all the machinery and tools of the Engineering Department. The premises have a desirable situation for a shipbuilder, having a frontage to the river Lea, near the junction with the Thames were planned by the present firm, and are in complete, and in all respects suitable and ready to carry on the manufacture of marine engines and general engineering works without any additional outlay. The position and arrangement of these premises allow the erection of steam machinery of any kind moored on the wharf, without the necessity of docking, which can be safely effected by reason of the absence of steam traffic on the river, and a sufficient depth of water at all states of the tide, a deep stratum of clay having been placed on the bed of the river. Vessels can be launched direct from the building, and the trade of goods, either coastwise or abroad, or raising, effected with the greatest facility. The building carried on by Messrs. Samuda, they were erected for the present owners by Messrs. Cubitt and Co. but a few years since, and are arranged as commodious light, and lofty workshops. The machinery and tools are by the first makers, and with all modern improvements. There are suitable foreman and watchman's houses attached to the works. Part of the purchase money may remain on mortgage, or the premises will be let on lease at a rack rental subject to the machinery being paid for at a valuation. Further particulars, may be had of Messrs. Fuller and Horsey, Bilbiterstreet, Lond n.

TO COACH-SMITHS, IRONFOUNDERS, BUILDERS, and OTHERS Valuable Leasehold Premises, George-street, Oxford-street. By

MESSRS. FULLER and HORSEY, on WEDNESDAY, AUGUST 23, at ELEVEN, on the PREMISES, unless an acceptable offer is previously made by private contract, by order of Mr. Henry Thorpe, who is retiring from business, the valuable LEASEHOLD MANUFACTURING PREMISES, for many years occupied by the eminent firm of Messrs. H. E. Thrupp and Sons, erected under their superintendence and arranged expressly for carrying on the business of a coach smith and founder in all the branches and on a large scale. The premises are spacious and most substantially erected, and comprise a lofty roundfloor building, 160 ft in length, occupied as smiths' shop and foundry manufactory or turnery of four floors, with brass foundry on the basement, forging and trimming shop, store rooms, and six dwelling houses, Nos. 61 to 66, under reserve at undersigned, five of which are let off at rents amounting to £ 7 per annum, the other is occupied as offices, and as a clerk's residence. The whole held for an unexpired term of seventeen years, at a moderate rent.—To be viewed till the sale by cards only. Particulars will shortly be ready, and may be obtained on the Premises; of Messrs. Burchells, Clark, and Mayes, Solicitors, 160, Oxford street; Bilbiterstreet, Oxford-street; and of the Auctioneer, Tottenham.

Conservative Land Society's Estate, Tottenham-green. Standing Oak, Elm, and Ash Timber. Excellent Materials of Spring-house, 140,000 Bricks, about four tons of Lead, Fixtures and Effects, Greenhouse, 56 feet long, Materials of outbuildings, 700 feet of close fencing &c &c.

MR. RICHARDS, on the PREMISES, near Tottenham High Cross, on TUESDAY, AUGUST 29, 1854, at ELEVEN o'Clock, in Lots, by order of the proprietors; the MATERIALS comprise forty panel and other doors, French doors with plate glass, sixty squares of batten and other floors, thirty-five pairs of sashes and frames, flights of stairs, closets, marble and other chimney-pieces, panelling, three patent waterclosets, with fittings; four and oth r pumps, lead cisterns, copers, stoves, ovens, hot-plate, verandahs, and portico, iron palisade fence, Portland stone landings, 50 feet of York paving, sills, coping, 2000 yards plain tiles, paving ditto, countess slates, and a variety of materials. A Baker's patent mangle, iron chest, and effects.—View day preceding; catalogues at the Offices of the Society, 33, Norfolk-street, Strand; of Messrs. Harrison and Lewis, Solicitors, 14, Boswell-court; at the Flower-pot, Bishopsgate-street; and of the Auctioneer, Tottenham.

WINDSOR and CLEWER, BERKS.—Valuable Freehold Estates Building Frontages and House Property.

MESSRS. BUCKLAND and SON have received instructions to SELL by AUCTION, at the CASTLE HOTEL, Windsor, on THURSDAY, AUGUST 24, at TWELVE for one, unless previously disposed of by private treaty, all that important and valuable FREEHOLD ESTATE, known as Bell Farm, in the parish of Clewer, within a short distance of the town of Windsor comprising about 72 acres of fine land, the greater part of which is rich arable, rising from the elevated and thickly studded with fine park-like trees, formine a complete avenue to the residence, with a compact farm homestead standing in the centre of the estate, and approached by a carriage road. This property is situated in a highly respectable locality, being bounded by the beautiful domain of St. Leonard's, Clewer Lodge, &c. and is admirably adapted for the immediate or early erection of villa residences, or would form one complete estate for investment or occupation. A portion of the land is arable, and forms a long frontage to the Bath-road, including the handsome crescent to Dedworth green, where building land is in great request, and will be submitted in convenient lots. House Property in Windsor in the High-street, Bachelor's Acre, and Bridge-street, near to Windsor-bridge, in the occupation of Mr. T. Hunt; two houses and shops situate in Thames-street, in the occupation of Mr. Berlin and Mrs. Morley; eight houses situate in Blackland, in the occupation Mr. Wood and others, twenty-one houses in Garden-court, in the occupation of Messrs. Goodall, Judson and others. Houses situate in Eton; six houses and shops situate in High-street, near to Windsor-bridge, in the occupation of Mr. Seaman and others; also seven houses in the rear of the above, in the occupation of Mr. White, Jewell, and others. The whole of these valuable properties will be sold in suitable lots, and may be viewed on application to the several tenants.—Particulars, with conditions of sale and plans of the property, may be had ten days previous thereto, of H. Daniel, Esq and H. Gyars, Esq Solicitors, Windsor; of Messrs. Haslam and Buckland, 2, Cannon-street West, City; and of Messrs. Buckland and Son, Auctioneers, Land Surveyors, Park-street, Windsor.

WINDSOR, BERKS.—Important Sale of Twenty-six first-class Freehold Villa Residence and valuable Building Frontages.

MESSRS. BUCKLAND and SON have been favoured with instructions from the Proprietor to SELL by PUBLIC AUCTION, at the WHITE HART HOTEL, Windsor, on THURSDAY, AUGUST 31st, 1854, at NINE for TWO o'clock, in lots, the following valuable and important PROPERTY, which will be found worthy the immediate attention of capitalists, in consequence of the failure of the contractors to fulfil their agreements. TWENTY-SIX first-class semi-detached FREEHOLD RESIDENCES, now in the course of erection, containing eight rooms each, of large dimensions, substantially built on the best and most improved principle, with good garden. Twelve of the houses are nearly completed, and the remainder are in course of progress. A long range of superior Building Frontages adjoining, which will be subdivided in suitable lots. This most desirable property is situate on the Fitz Estate, near to the Queen, in the vicinity of the New Trinity Church; and the villas now about to be sold are in good keeping with, and intended to carry out the design of the whole terrace of that handsome quarter. For the general improvement of the town of Windsor, which is rapidly rising into estimation, and affords an unusual opportunity for profitable and safe investment. May be viewed any time previous to the sale, and to Mr. Jennings, on the Clarence Estate, and particulars, with conditions, may be obtained ten days previous to the sale, of Messrs. Dodd and Gambier, Solicitors, 6, Gray's-inn-square, London; of Messrs. Haslam and Buckland, 2, Cannon-street West, City; and at the Offices of Messrs. Buckland and Son, Auctioneers, Land Surveyors, and Valuers, Park-street, Windsor.

TO BRICKMAKERS, RAILROAD CONTRACTORS, BUILDERS, AND OTHERS.—TO BE SOLD by AUCTION, by

MR. R. P. DUNN, in the yard and stables at the SWAN INN, Tomas-street, Windsor, on SATURDAY, AUGUST 26, 1854, at HALF PAST TWELVE for HALF-PAST ONE o'clock punctual by SEVEN very superior young and fine aged bay, brown, grey, and black CART-HORSES, (and some bay broughamhorse, five years old; two new Scotch carts, builder's ditto, two other ditto, stone, brick, or timber truck and waggon, 9-inch wheels, capable of carrying 15 tons; capital pleasure van, on eight springs, to carry twenty persons; ten sets of very strong and nearly new Yorkshire made thill and trace harness, clothed and complete, twenty-two corn-sacks, nose-bags, and stable utensils. On the day time previous to the sale Catalogues to be had at the Swan; the lots in the neighbourhood; of Mr. C. Wyly, Cabinetmaker and Upholsterer, Peascod-street; and at Mr. R. P. Dunn's Office, Windsor, Berks.

SALES BY AUCTION.

TO be SOLD by AUCTION, on FRIDAY, AUGUST 25, 1854, at TWELVE o'clock at Noon, in the BROKER'S SHEDS, BRUNSWICK and TOXTETH DOCKS, Liverpool.

500 logs Havana Cedar.

700 logs Cuba Mahogany, being the cargo (save 110 logs Cedar, landed in time for the sale of the 9th instant), now unloading ex *Alberina*, from Manzanilla de Cuba.—Apply to Messrs. J. W. Carr and Co. Merchants.

650 pieces, of which 98 are Curls, City St. Domingo Mahogany, being the cargo, now landing, ex *Enterprise*, from the City of St. Domingo. On account of the Importer.

29 tons City St. Domingo Lignum-vitæ, of unusually large dimensions and superior quality, some being 26 inches diameter.—Apply to Messrs Dirks and Tomlinson, Merchants

80 logs Cuba Mahogany, 100 logs Havana Cedar, 602 Lancewood Spars (which were growing in June last), 30 tons Cocuswood, being the cargo just arrived per *John*, direct from Cuba. On account of the Importers.

308 planks Rio Rosewood, just landed, ex *Lusitania*, from Rio direct.—Apply to Messrs. A. W. Lyon and Co and Messrs. Todd, Naylor, and Co. Merchants.

53 logs Black Walnut, ex *Montmorency*, from Quebec.—Apply to Messrs M'Calmont (Brothers) and Co. Merchants.

150 planks Italian Walnut, measuring 1154 feet, ex *Danube*, from Ancona. On account of the Importers.

504 logs Pencil Cedar, just landed, ex sundry vessels. On account of the Importers.

The first following the sale of Havana Cedar, say HALF-PAST TWELVE o'clock, and to accommodate the trade.

966 logs Honduras Mahogany, lately landed, ex *Ceres* and *Raindeer*, from the several ships' holds, but to all a distribution will be performed the day previously to, and on the day of sale.

The cargo of Cuba Mahogany and Cedar is perhaps the finest imported this place for some time found, large diameter, ranging up to 34 inches, and long lay, well made, and having about 100 logs Mahogany, meriting individual lotting. Of the second cargo of Cuba Woods, it may be only needful to remark that the Lancewood Spars were selected for Mr. Williams' ship; and they were actually growing until the month of June last. But, the cargo of City St. Domingo Mahogany, ex *Enterprise*, is brought to this market, personally, by the ex-president of the City, who will himself present it to the company: It is said to be one of the finest cargoes ever brought to Europe. Of the wood landed, some of the mahogany is 3½ feet deep.

The Rio Rosewood contains a mark for which the importers, previously to this auction, have refused 34l. per ton; and no pains have been spared to collect together the finest possible wood for this sale, the planks being inexpressibly superb, and weighing each to upwards of 22 st.

The Bahia Rosewood is chiefly large and sound, being very valuable as clear wood, with some Queen Planks.

Of Zebra wood (though not named above), there is a splendid assortment.

Of Walnut wood the assortment is first rate. Canadian in log, and Italian in plank. To the former especial attention is invited, for it is cheap and most useful just now. The planks are very fine, averaging upwards of 16 feet per plank.

The Importers have personally brought together an assortment of the best wood, such as the Liverpool mode of business can alone induce, under its system of free and fair trade in this important branch.

A Catalogue may be seen at the Office of this Paper on Monday next.

EDWARD CHALONER, Broker.

6, East side, Queen's Dock, Liverpool.

TO TIMBER MERCHANTS, BUILDERS, CABINET AND COACH MAKERS, SHIP BUILDERS, WHEELWRIGHTS, AND OTHERS.

ROBERT WARD has received instructions to SELL by AUCTION, on the PREMISES, Bermondsey New-road, Southwark, on WEDNESDAY and THURSDAY, the 6th and 7th SEPTEMBER, 1854, at ELEVEN for TWELVE o'clock, in consequence of the premises being let, the entire STOCK of a Timber Merchant, consisting of about 30,000 deal yellow pine battens, 1,500 white and yellow deals and planks, 100 pieces Baltic timber, 500 English oak trees, 40 loads of dry English ash plank, dry beech and elm planks, 10,000 oak spokes, 1000 feet of beech plank, elm stocks, oak posts and rails, dry mahogany in planks, boards, and thicker, cut deals, &c. Also two timber carriages, cart, trucks, and drays, three powerful cart horses and chaise-mare, harness, utensils in trade, and household furniture, including a pianoforte, &c. May be viewed two days prior and morning of sale. Catalogues had in due time of the Auctioneer, No. 8, Oxford-street.

Eight Hundred Good Mats, of various Sizes.—TO BE SOLD by PUBLIC AUCTION, by

MR. W. BROWN, in the COURT-YARD of the JUDGES' LODGINGS, at Aylesbury, Bucks, on SATURDAY, the 26th day of AUGUST, 1854, and three following days, at SEVEN o'clock each day, by direction of the Visiting Justices of the County Prison, at Aylesbury, EIGHT HUNDRED MATS, made of the very best coco-nut fibre by the prisoners confined in the County Prison at Aylesbury. Fifty Lots will be offered each Saturday; each lot comprising four mats of similar size and quality. Samples may be seen any day prior to the days of sale, at the County Prison, Aylesbury, on application to the governor or store-keeper there.—Aylesbury, 8th August, 1854.

TO BUILDING MATERIAL DEALERS, BUILDERS, AND OTHERS.

FIRST PORTION of the BUILDING MATERIALS on the SITE of the NEW JUNIOR UNITED SERVICE CLUB-HOUSE, Charles-street, St. James's, TO BE SOLD by PUBLIC AUCTION, by Mr. Robins, on WEDNESDAY, the 23rd August, 1854, at TWELVE precisely, the Fittings of the Houses, Nos 14, 15, and 16, St. Alban's-place, comprising sashes and frames, doors, chimney-pieces, staircases, closets, skirtings, linings, stoves, ranges, gratings, and other fittings and fixtures of the above detached modern houses, in excellent condition, and readily convertible to building purposes.—The Premises may be viewed, and further information with forms of tender may be obtained at the Offices of Messrs. NELSON and INNES, 38, Regent-circus, Piccadilly, where the Tenders are to be delivered on THURSDAY, 31st AUGUST, at TWELVE o'clock.

WANTED, SCHOOL PREMISES, for an endowed Ward School, within ten miles from London, easy of access, and containing sufficient accommodation as to number of rooms, &c. for about thirty children, and with adequate ground. Rent not to exceed 90l. per annum.—Applications to be by letter (post-paid), addressed to Mr. LOFT, Solicitor, 43, Bow-lane, Cheapside.

QUANTITIES, Measurements, Dilapidation Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find it much to their advantage to put out any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane and Acton-hill.

London: Printed by Charles Wyman, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, August 19, 1854.

ADVERTISEMENTS.

TO the MAGISTRATES for the COUNTY of MIDDLESEX.

MY LORDS AND GENTLEMEN,—I lose no time in offering you my most grateful thanks for having returned me the successful Candidate for the office of District Surveyor to the Parish of Hammersmith, rendered vacant by the untimely death of my late friend and partner, Mr. James Charles Christopher, and to again assure you that I will use my utmost endeavours so to acquit myself in the performance of its several duties, as to warrant your perfect approval of the appointment which you have this day conferred to my charge.

I have the honour to be, my Lords and Gentlemen,
Your obliged and humble servant,
ROBERT GARLAND.

Thames-chambers, Adelphi, August 24, 1854.

COMPETITIONS.

CITY of ELY.—DESIGNS for NEW BURIAL-GROUND CHAPELS.—Premium of 10*l.*—The Burial Board for the Parishes of Holy Trinity and St. Mary in Ely, hereby offer a Premium of 10*l.* to the architect or other person whose design for the above Chapels shall be selected for adoption. Two Chapels will be required, one for the use of Members of the Church of England, the other for all other Denominations. The City contains upwards of 6,000 inhabitants. The cost of the Two Chapels not to exceed in the whole 1,000*l.* The Design, with an estimate of the expense, accompanied by working drawings and specifications complete, to be sent to me on or before FRIDAY EVENING, the 8th SEPTEMBER next, at SEVEN o'clock, when the examination will take place. The Board does not pledge itself to employ the architect whose design shall be accepted.—By order of the Board,

Ely, August 18th, 1854. WILLIAM MARSHALL, Clerk.

TO ENGINEERS AND ARCHITECTS.

WIDENING of BIDEFORD BRIDGE, DEVON.—The Feoffees of the Bideford-bridge Trust and the Town Council of Bideford are desirous of receiving DESIGNS and PLANS for WIDENING the BRIDGE to the extent of 16 feet for carriages and from 8 to 10 feet for foot passengers at least, accompanied by estimates of the expense. A premium of 50*l.* will be given for the best design, 30*l.* for the second best, and 20*l.* for the third best, and 10*l.* for the fourth best, and a preference will be given to the design which combines the greatest economy with efficiency and durability. The bridge may be inspected at any time by applying to the Bridge Steward, or to Mr. THOMAS MARTIN, Bridgewarden; and the designs and estimates are to be sent on or before the 29th day of SEPTEMBER next, free of expense, to Mr. C. HOLE, Bridge Steward, Bideford, from whom any further information may be obtained. The Advertisers do not pledge themselves to adopt either of the designs.

Bideford, 22nd August, 1854.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that the Honourable Board of Ordnance are about to enter into a SPECIAL CONTRACT for ERECTING NEW DRAWING-ROOMS, &c. at the ROYAL MILITARY ACADEMY, Woolwich common, and that such persons as may wish to TENDER for the same, may inspect the plans, and obtain copies of the specification and form of Tender for the work, by applying to the Clerk of Works, at the Royal Engineer's office, Royal Artillery Barracks, on or before the 29th AUGUST, 1854.

Tenders upon the printed form to be delivered, prepaid, at the Office of Ordnance, Pall-mall, London, on the 30th AUGUST, 1854, addressed "To the Secretary to the Honourable Board of Ordnance," and marked "Tender for New Drawing-rooms, Royal Military Academy, Woolwich-common."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, 8th August, 1854.

ORDNANCE.—NOTICE to BUILDERS and CONTRACTORS.

Sealed TENDERS, addressed to the Secretary to the Board of Ordnance, will be received until NOON of THURSDAY, 7th SEPTEMBER next, at the Ordnance office, Pall-mall, London, from parties willing to CONTRACT for the CONSTRUCTION of TWO EXPENSE POWDER MAGAZINES and TWENTY-NINE SHELL RECEIPTACLES, at Gosport Lines, Priddy's Hard, and Fort Monckton, Gosport, Hants.

Forms of Tender, together with specifications and all further particulars, may be obtained at the Royal Engineer Office, Portsmouth, where may be seen the plans, elevations, and sections.

Attendance will be given at the Royal Engineers' Office, Gosport, at HALF-PAST TEN o'clock, a.m. precisely, on TUESDAY, the 29th inst. to proceed round the works to point out the sites and afford any further information required.

N.B. The Tenders to be endorsed "Tender for Expense Powder Magazines and Shell Receptacles, Gosport."

Royal Engineer's Office, Portsmouth, 21st August, 1854.

NOTICE to BUILDERS.—ORDNANCE CONTRACT. The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that the Honourable Board of Ordnance are about to enter into a special CONTRACT for BUILDING a RIVER WALL, on the Essex side of the Thames, and that such persons as may wish to Tender for the same may inspect the plan, and obtain a copy of the specification and form of Tender for the work, by applying to Mr. CARF. WRIGHT, Clerk of Works, at the Royal Engineer Office, Royal Arsenal, Woolwich, on or before the 4th of SEPTEMBER, between the hours of TEN and FOUR.

Tenders upon the printed form to be delivered at the Office of Ordnance, Pall-mall, London, on the 5th of SEPTEMBER, 1854, addressed to the secretary to the Honourable Board of Ordnance, and marked "Tender for Work at Woolwich."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, 23rd August, 1854.

ORDNANCE CONTRACTS.—TENDERS required for the necessary work to be done in LAYING DOWN PIPES and providing and fixing the necessary FITTINGS, &c. for the supply of GAS to the CAVALRY BARRACKS at York. Notice is hereby given, that the Honourable the Board of Ordnance will receive TENDERS on or before WEDNESDAY, the 6th SEPTEMBER, 1854, from such persons as may be willing to perform the above-mentioned works. Specifications for these works are to be seen, and forms of Tenders obtained, with every other information, on application at the Royal Engineer's Office, No 5, New-walk-terrace, York, any day (Sundays excepted) between TEN and FOUR o'clock, until TUESDAY, the 5th SEPTEMBER, 1854.

Royal Engineers' Office,
No. 5, New-walk-terrace, York, 17th August, 1854.

BOSTON BURIAL BOARD.—To BUILDERS and CONTRACTORS. Persons desirous of CONTRACTING for the ERECTION of the TWO CHAPELS and ENTRANCE-LODGE on the new burial-ground for this parish, and for Wood Fencing, Planting, and Draining the proposed cemetery, and for laying out the walks thereon, may inspect the plans and specifications for the same at the office of Messrs. PRITCHETT and SONS, 18, Lendal, York, from THURSDAY, the 24th inst. to MONDAY, the 4th of SEPTEMBER; and at the office of Mr. SIMPSON, Solicitor, Boston, from that day until TUESDAY, the 12th of SEPTEMBER. Further information may be obtained on application to the Architects, Messrs. PRITCHETT and SONS, of York. Tenders, sealed and endorsed "Burial Board Tender," are to be sent to me before TWELVE o'clock on THURSDAY, the 14th of SEPTEMBER. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board,

Boston, Aug. 21, 1854. D. S. SIMPSON, Clerk.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a CHURCH at SUTTON-HILL, five miles from Ludlow, in the county of Salop, may inspect the drawings and specification, at the Feathers Hotel, in Ludlow, on and after the 23rd day of AUGUST. Sealed Tenders, addressed to the Rev. THOMAS UNDERWOOD, of Corfton, near Bromfield, Shrewsbury, to be delivered on or before the 1st day of NOVEMBER, at ELEVEN a.m.—Further information may be obtained by application to the Architect, P. BRANSDON, Esq. 75, Great Russell street, London. The lowest Tender will not necessarily be accepted, but such as may be considered most eligible.—August 22, 1854.

BUILDERS desirous of TENDERING for a small DRAIN-PIPE WORKS, to be erected at Higham, near Rochester, for Messrs. SINGER and GREEN, may see the plans, &c. on and after the 30th inst. at the Office of Messrs. AIGRIN and CAPPE, 3, Farnaval's-inn, to whom Tenders are to be addressed by the 13th SEPTEMBER.

CONTRACTS.

3rd. For Hewing and Paving Rag Pitching
4th For Red ym Rag Pitching
Any person or persons willing to engage in the above works are requested to deliver their Estimates at the Offices of the said Board of Health, No. 18, Prince-street, on THURSDAY morning, the 7th day of SEPTEMBER next, at Ten o'clock precisely, when the Committee will meet to determine upon the same, and then the Committee will meet to be open, and a Form of Printed specifications of the work to be done, and a Form of Tender, may be personally had on application at the Office of the Surveyor, Mr. FREDERICK ASHMEAD, C.E., or by letter, post-paid, addressed to the Clerk, at the Offices of the Local Board of Health, No. 18, Prince-street, Bristol. The parties tendering will be required to be present at the opening of such Tenders for the purpose of entering into a contract.
The Committee will not be bound to accept the lowest or any Tender. Any further particulars can be obtained of the Architect, Mr. TALBOT BURY, 30, Welbeck-street, Cavendish-square, London.—By order of the Council,
FREDERICK CHARLES STEGGALL, Town Clerk
Weymouth, 10th August, 1854.

HORNSEY DRAINAGE.—To BRICKLAYERS and GENERAL CONTRACTORS.—The Highway Board for the Parish of Hornsey are prepared to receive TENDERS for the EXCAVATING, CONSTRUCTING and COMPLETING a portion of certain intended BRICK CULVERTS and DRAINS, and for other works in connection therewith, at Maynard-street, in that parish. Plans sections, and specification of the above works may be inspected, and other particulars obtained, at the Office of the Board, 17, High-street, Hornsey, on the hours of NINE and ELEVEN, on and after Saturday the 19th AUGUST. Tenders to be sent in on or before MONDAY, the 28th AUGUST. Tenders to be sent in on or before MONDAY, up to FOUR p.m., the 4th SEPTEMBER, and mark "Tender for Drainage Works," addressed as above to Mr. HENRY M. RAMSAY, Surveyor to the Board. The lowest or any Tender not necessarily accepted.—By order,
JOHN SMITH, Chairman.
A. C. BACHAM, Clerk.

TO BUILDERS.
PARTIES who wish to TENDER for the ERECTION of a MANSION HOUSE at Lullenden, Hawkhurst, Kent, may inspect the plans and specifications at Mr. Hill's, near Hawkhurst, on TUESDAY the 29th, and following days, until SATURDAY, the 2nd SEPTEMBER, on which day Tenders are to be delivered. Schedules of quantities and forms of Tender will be supplied at Flimwell, on application to Mr. ATKINSON, Clerk of Works.
WM. REID CORSON, Architect.
7, South-parade, Leeds.

TENDERS will be received on THURSDAY NEXT, at FIVE o'clock, at the Offices of the Architect, Mr. W. E. WILLIAMS, No. 7, Coleman-street, for the erection of FOUR DETACHED VILLAS at Walthamstow. The plans, specifications, &c. may be seen between the hours of TEN and FIVE daily.

TO CONTRACTORS FOR PUBLIC WORKS.
CARMARTHEN SEWERS.—The Carmarthen Local Board of Health are desirous of receiving TENDERS for the CONSTRUCTION of BRICK SEWERS, for a portion of the Town of Carmarthen, and which is to be under the Streets. Parties desirous of Tendering can see the plans and specification at my office, on and after WEDNESDAY, the 23rd inst. Tenders will be received up to Noon of later than SATURDAY, the 26th SEPTEMBER next.—By order of the Board,
GEO. THOMAS, Clerk.
Carmarthen, August 21, 1854.

CHATHAM LOCAL BOARD of HEALTH.
DRAINAGE WORKS.—To CONTRACTORS and BUILDERS. The Local Board of Health for the Borough of Chatham extra hereby give Notice, that they are ready to receive TENDERS for CONSTRUCTING the LENGTH WORKS, DRAINS, SEWERS, CULVERTS, and TIDE FLAP, in a MAIN BRICK SEWER, to commence at High-street, Brompton, at the end next to Watts-place, to the Lime Quarry, in and near the said Borough, to include a length of 1,800 feet or thereabouts, with side entrances, gullies, air shafts, and other works connected therewith.
The contract drawings, specification, and general conditions may be examined on and after MONDAY, the 21st inst., and printed bills of quantities, with form of Tender, may be had upon payment, of 2s. 6d. each, which will be returned on application at the Office of the Local Board, 10, High-street, Chatham, or at the Office of Mr. EDWARD GOTTO, C.E., 5, Great George-street, Westminster.
Tenders to be delivered at the Office of the said Local Board, Chatham, before the hour of ELEVEN o'clock on FRIDAY, the 1st of SEPTEMBER next, addressed to the Local Board of Health, and endorsed "Tender for Contract No. 3."
N.B. The Local Board do not bind themselves to accept the lowest, or any Tender.—By order of the Board,
THOMAS HILLS, Clerk.
Chatham, 17th August, 1854.

LUTON LOCAL BOARD of HEALTH.—
DRAINAGE of HIGH TOWN.—Parties desirous of CONTRACTING, either separately or jointly, for SUPPLYING or LAYING about 4,000 lineal feet of GLAZED PIPES, with necessary gullies, traps, and branch drains, may inspect the plans and specifications at the Office of Mr. T. L. EVANS, Surveyor to the Board, Luton, where forms of printed Forms of Tender may be obtained on payment of 1s. Papers must be sent by SIX o'clock on TUESDAY Evening, the 29th inst., addressed to the Chairman.
JOHN BAILEY, Clerk.

TO BUILDERS AND CONTRACTORS.
MILITARY DEPOT for the COUNTY of DENBIGH, at WREXHAM.—Any person willing to CONTRACT for BUILDING the new MILITARY DEPOT for the county of the aforesaid, and comprising the Royal Denbigh Militia, are required to enter into a satisfactory and sufficient surety for the due completion of the works. The lowest Tender may not be accepted, with at least one further reduction thereof by the parties. Any further information on the subject may be had at my Office at Chester, and always held on at Wrexham.
THOMAS TENSON, Architect.
Chester, 10th August, 1854.

CONTRACTS.

SHREWSBURY GENERAL CEMETERY.
Parties willing to PROPOSE PLANS for FENCING and LAYING OUT the intended PUBLIC CEMETERY at SHREWSBURY, and for ERECTING TWO CHAPELS thereon, are requested to send their plans, with an estimate of the cost, to me the undersigned Clerk to the Burial Board, on or before the 9th day of SEPTEMBER next. A premium of £5 will be paid for the plan which shall, in the opinion of the Board, be the best, and be also well adapted for the purpose, on payment of which premium the Board are to be entitled to the plan, but are not by such selection to be in any way bound to employ the party furnishing it. A plan of the ground, which is 20 acres in extent, may be seen on application to me, or to Mr. TISDALL, the Surveyor; and the Board.
J. J. PEELE, Clerk to the Burial Board.
Guildhall Shrewsbury, August 8, 1854.

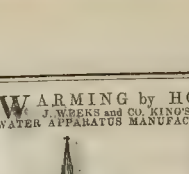
SHREWSBURY GENERAL CEMETERY.
THE EXTENSION of TIME for PLANS and LOANS. The TIME for sending in plans for the intended cemetery at Shrewsbury, has been EXTENDED to the 9th day of SEPTEMBER next. Parties willing to ADVANCE LOANS for the above undertaking are requested to state in writing the amount proposed to be lent, and the rate of interest required, to me, on or before the 16th day of SEPTEMBER next. It is proposed to pay off annually one-twentieth of the principal money borrowed.
J. J. PEELE, Clerk to the Burial Board.
Guildhall, Shrewsbury, 21st Aug. 1854.

TO BUILDERS.
DEWSBURY, YORKSHIRE.—Parties willing to TENDER for the ERECTION of SCHOOLS, TEACHERS RESIDENCE, and PERSONAGE HOUSE, at the above town, are requested to communicate with the Architect by letter forthwith, addressed to 20, Brunswick-square, London, or Wellington-road, Dewsbury.
E. W. PARR, Arch tect.

LEEDS SEWERS.—To BRICKLAYERS, MASONS, and GENERAL CONTRACTORS.—The Council of the Borough of Leeds are prepared to receive TENDERS or PROPOSALS for the EXCAVATING, BUILDING, and COMPLETING of several miles in length of the principal BRANCH SEWERS, for the more effectual drainage of the district of Leeds, Hunslet, and Holbeck, within the said borough. Plans and specifications may be seen, and further information may be had, on and after THURSDAY, the 24th AUGUST, on application to Mr. J. W. LEATHER, Town Clerk, Leeds, and a draft of the contract required to be entered into may be seen at the Town Clerk's office, Leeds. Tenders or proposals to be delivered, sealed up, at the Town Clerk's Office, Leeds, before 12 o'clock in the morning of FRIDAY, the 15th SEPTEMBER, 1854. The Council do not pledge themselves to accept the lowest Tender. By order,
JOHN ARTHUR JAIN,
Town Clerk and Clerk of the Council.
Town Clerk's Office, Leeds, 11th August, 1854.

TO CONTRACTORS AND OTHERS
THE ENFIELD LOCAL BOARD of HEALTH give Notice that they are prepared to receive TENDERS for the WORKS and MATERIALS for the WATER SUPPLY and SEWERAGE of their district as follows, viz.—
CONTRACT No. 1.—For Cast-iron Water-pipes and other Castings.
CONTRACT No. 2.—For Sluice-cocks, Hydrants, or Fire-cocks.
CONTRACT No. 3.—For Engine-house, one Steam-engine, Pumps, &c.
CONTRACT No. 4.—For erecting of an Engine-house, Compensating Reservoir, &c.
CONTRACT No. 5.—For making and completing a 18-in. Artesian Well, Brehole, &c.
CONTRACT No. 6.—For constructing an 18 in. Brick Sewer, &c.
CONTRACT No. 7.—For Stoneware Drain and Sewer Pipes, &c.
CONTRACT No. 8.—For laying the Cast-iron Water-pipes, Sewer-pipes, &c.
Either of the above specifications and conditions of contract may be obtained upon payment of five shillings each, and the plans, drawings, and sections inspected by application at the office of J. PILBROW, C.E., Tottenham Enfield, to the Board.
Tenders must be sent in sealed and marked with the number of the contract on or before the 9th day of SEPTEMBER next, addressed to the said Local Board of Health, Enfield, Middlesex.
By order of the Board, JOHN SAWYER, Clerk.
Enfield, Aug. 22, 1854.

LOUGHBOROUGH TOWN-HALL.—TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of the TOWN-HALL at Loughborough may inspect the plans and specification of the proposed works, at the House in the Market-place, Loughborough, late in the occupation of Mr. Brooks, esq., on and after MONDAY, the 21st day of August instant. Sealed Tenders to be sent in on or before MONDAY, the 11th day of SEPTEMBER next, endorsed "Tenders for the erection of the Town-hall, Loughborough," addressed to the undersigned; and further particulars may be obtained by application to the architect, Mr. WILLIAM SLATER, of New Adelphi-chambers, 12, John-street, Adelphi, London. Security will be required for the due performance of the contract, and the Committee do not pledge themselves to accept the lowest or any Tender.
A. BROOKS HALL, Hon. Secretary.
A. BROOKS HALL, Hon. Secretary.
Loughborough, Aug. 7, 1854.



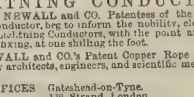
TO BOARDS OF HEALTH, COMMISSIONERS OF SEWERS, ENGINEERS, ARCHITECTS, DISTRICT and ROAD SURVEYORS.
W. AUSTIN'S PATENTED SEWER and TUNNEL BLOCKS, BRICKS, DRAIN PIPES, IRON TRAP-GRATINGS, &c. await inspection, at Aspdin and Co.'s Wharf, Abbey-street, Westminster. Parties are requested to prove the merits of the various articles.—Communications, address W. AUSTIN, 27, Holywell-street, Westminster.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any extraneous metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

ECONOMIC COOKING-STOVE.—
DEANE, DRAY, and CO.'s compact, neat, and economical IMPROVED COOKING-STOVE is the object of the public. It is designed and constructed on so simple a construction, easy of management, capable of dressing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for any purse or any kitchen. An experience daily in operation in the ironmongery department of Deane, Dray, and Co.'s establishment, where may also be obtained every variety of kitchen ranges, and heating stoves for all classes, from 21 to 200 guineas.—See illustrations of the Cooking-stove, in the Illustrated London News, of August 19th, page 173.
Deane, Dray, and Co., 46, London-bridge, and 21, King William-street.

NEW HOUSES OF PARLIAMENT.—
HEPPEL'S GAS STOVES, RANGES, and BATHS, in action daily, may be seen at the above building. A great saving in coals from 15 to 25 per cent. Gas Baths from 2d. to 1s. A good warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 21. to 20 guineas. Heppel's GAS MITTENS, upwards of 50,000 in use.—See testimonials at the Office, 345, Regent-street, or at the Manufactory, Gravesend, St. Pancras, near Pitfroy square.

WARMING by HOT WATER.—
J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully



soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Boge's, delivered at a meeting of the Architectural Society, wherein Mr. Boge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 6 per cent.

CHUBB'S LOCKS & FIREPROOF SAFES.
INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.
"London and North Western Railway Company,
"Liverpool, May 17, 1853.
"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.
"I am, Gentlemen, your obedient servant,
"GEORGE PALMER.
"Messrs. Chubb and Son."
FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION
"8, Great Vine-street, May 3, 1853.
"Gentlemen.—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant,
"Superintendent C Division of Police.
"Messrs. Chubb and Son."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.
Complete Illustrated Lists, with prices and sizes, will be sent on application.

Gutters, Socket Pipes for Water Closets, Plunge Pipes, Hot Water Pipes and Connections, Sash Weights, and other Castings; Iron Work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts. Prices paid to all connections. Contracts taken to any extent. Goods landed. A powerful crane.

IMPROVED PATENT WIRE ROPE.—
Mr. ANDREW SMITH, the Original Inventor of Wire Rope for Lightning Conductors, Sash Lines, and other purposes, directs attention to his large and well manufactured Stock, for which he has obtained the sixth patent since 1838.—Office, 89, Princes-street, Leicester-square, London.

GEORGE and SAMUEL CUTLER, IRONWORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders Purifiers, and all descriptions of Gas Apparatus. Gas works erected complete. And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smiths Work of the best Construction and workmanship.—S. & S. Improved Side Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

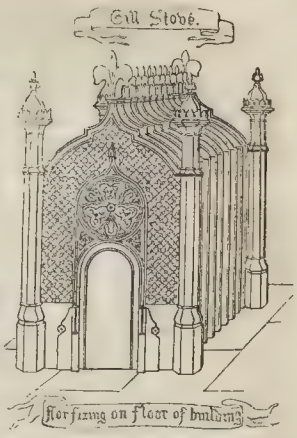
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc. It therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18 oz.	per foot super.		
No. 12	"	"	20 oz.	do. do.
No. 13	"	"	23 oz.	do. do.
No. 14	"	"	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Door-plates, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

JONES, Iron Merchant, Iron Bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. All cast-iron pipes for gas, water, or drainage, bends, tees, &c., flange and hollow pipes, with all the requisite junctions; lamp-posts and retorts, stable fittings, pressed tools, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

WIRE STRAND FENCING,

as furnished with all its fittings, by R. S NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co after the model of the fences of this material in the Slopes and Homepark, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

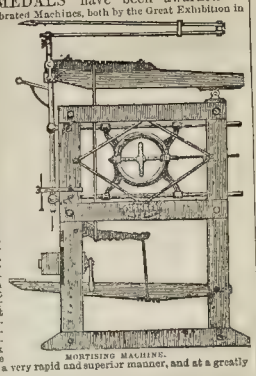
NEW PATENT MACHINE for

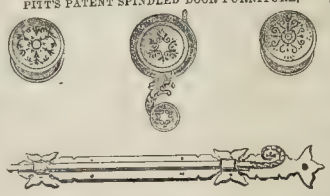


MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to

these celebrated Machines, both by the Great Exhibition in London, and many scientific Institutions.

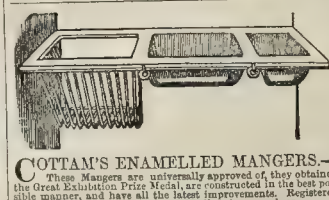


They are extensively used throughout the United Kingdom by London coachbuilders, contractors, coach and cabinet-makers, millwrights, carriage & waggon builders, merchants, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, grooving, mortising, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, & will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

MORTISING MACHINE.

Sold only by WILLIAM FURNESS, Patentee, 20, Lawton street, Liverpool, from whom full particulars may be obtained.

HART AND SON,



53, 54, & 55, WYCH-STREET, and 91, DRURY-LANE.
PROPRIETORS AND MANUFACTURERS OF
PITT'S PATENT SPINDLED DOOR FURNITURE,

In China, Glass, Ivory, Metal, &c.

BARTON'S PATENT STABLE

FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description. Every article in Stable Furniture on show. COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

STEPHENSON and PEILL, 61, Gracechurch-

street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hothouse Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibi-

tion, 1849.—A 200,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by ROILESVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green-houses. The Calorifère has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. ROILESVE, French Engineer, 55, King William-street, City.

STEAM-ENGINE.—FOR SALE, a four-

horse power upright Condensing Engine, well finished.—Apply to S. S. TAYLER, Battersea.

TO BE SOLD, a Three-horse High-pressure

STEAM-ENGINE, and Six-horse BOILER, and fittings, complete, in capital order. Can be seen in motion. Price 50 guineas.—Apply to H. E WARDLE, North Kent Saw-mills, Woolwich, Kent.

STEAM-ENGINE and BOILER.—TO BE

SOLD, a Ten-horse Power High-pressure STEAM-ENGINE and BOILER, both quite new, constructed for the purpose of being worked in the factory where they now are, but not now required for that purpose.—Inquire of Messrs. BUNNETT and CO. Engineers, New-cross-road, Deptford.

SUCCESSFUL VENTILATION.—

WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

SMOKE CONSUMING.—Mr. BOOTH,

Civil Engineer, is desirous that the public should understand that, from an experience of more than twenty years' practice as a furnace engineer, he is in a position to prove that, for the purpose of consuming smoke effectually, each particular furnace will require an apparatus adapted to its dimensions and peculiar construction, as in no two cases can the same plan be beneficially adopted Mr. BOOTH is prepared to submit suitable PLANS for FURNACES and OVENS of every description, which will consume the smoke and effect a considera'le saving of fuel, as proved in many instances.—Apply No. 9, Portland-place, Wandsworth-road, London.

SMOKE PREVENTION.—(OFFICE of

REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NORRSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

WANTED, a WEIGHBRIDGE for Carts

and Waggons, or for Carts only, in good working condition. Also two WET-LIME PURIFIERS.—Apply by letter, to Mr. HANSON, Crystal Palace, District Gas Company, Sydenham.

ARTESIAN WELLS.—Boring for Water,

Sinking Shafts, &c. The Nobility, Gentry, Water Companies, Towns, Baths, Brewers, and Manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming street, Pentonville. Pumps and machinery for raising water from deep wells, boring tools, and well-pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

ACORN TIMBER WHARF, Canal Bridge,

Old Kent-road.—RICHARD MAY informs the building public that his business in future will be carried on at Acorn Wharf. They are invited to inspect the stock of timber, deals, and all kinds of wood goods which are now ready for delivery, at the following reduced prices:—

Norway and Swede Timber, from 65s. per load.
Dunting and Riga Timber, from 70s. per load.
Gefle Deals, Yellow, 4s. 6d.; White, 4s. 9d. per 12 feet.
Christiana Deals, Yellow, 6s.; White, 6s. 3d. per 12 feet.

Fairbairn and Sons, Manchester, &c. &c. are prepared to make sales on and purchase in Canada, of oak, elm, pine, birch, red and white pine spruce, hacmatac, &c. either in sait, boxed, red and white pine spruce, hacmatac, &c. either in sait, boxed, red and white pine spruce, hacmatac, &c. either in sait, boxed

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 3 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 325, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest design, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 23, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles, lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landing, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—THOMPSON and HOLMES, MARBLE BROKERS, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from all the principal quarry owners at Carrara, for sale on commission only, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.—The Marble Wharf, Thames Bank, Pimlico, adjoining Vauxhall-bridge. Temporary Office, 8, Crescent-terrace, Millbank.

THE MARBLE WHARF, Thames Bank, Pimlico, adjoining Vauxhall-bridge.—THOMPSON and HOLMES, Marble, Wood, and Stone Brokers and Contractors, and Builders' Agents. Every description of English, Italian, Belgian, and other Marbles.—Temporary Office, 8, Crescent-terrace, Milbank.—General Landing Wharf.

ITALIAN MARBLE.—W. WALTON, of Carrara, Proprietor of Marble Quarries, begs to inform the trade that he has made an arrangement with Mr. John Foot, of Western-wharf, Abingdon-street, Westminster, for the Sale of his Marble. A constant and well-selected stock will always be at the wharf. Orders received for shipments direct, or delivered in dock.—Abingdon-street, June 13, 1854.

TO SCULPTORS, MASONS, AND BUILDERS.

MESSRS. BRINE (BROTHERS), beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SON, of Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary, Vein, and Sicilian, will arrive next month. They already have 100 blocks of Vein and Sicilian to select from, at their extensive depôt, Great Northern Wharf, Canal-road, King's-cross, where may also be found marble slab of various descriptions, sawn by their powerful machinery.

H. W. WILKINS, Manager.

ITALIAN and GALWAY MARBLE QUARRIES.

The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Mod l Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—
As miserable imitations of this much-admired material are being made, parties are recommended to supply them only from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and is manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in a marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble, inlaid, massive Chimney-Pieces, in Black, Black and Gold, Barnila, Sienna, Verd Antique, Brocatella, Dove, St. Anna's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, Fan Juan, Emperor's Red and Amber Marble, for Bedrooms, Breakfast Rooms, Best and secondary Bed-Room, &c; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

VALUABLE LEASEHOLD PREMISES.
The Committee for conducting the affairs of the Royal Hospitals of Bridewell and Bethlem will meet at BRIDEWELL HOSPITAL, New Bridge-street, Blackfriars, on TUESDAY, the 25th day of AUGUST next, at TWELVE o'clock precisely to receive TENDERS for taking on LEASE, for twenty-one years from Christmas, 1854, the HOUSE and PREMISES numbered 2 in Riches court, Lime-street; now on lease to Mr. John Young. Tenders, sealed and endorsed "Tender for Premises Riches court," must be delivered at the Clerk's Office, Bridewell Hospital, before TWELVE o'clock on the 25th of AUGUST next; and parties offering are to be in attendance. The Committee do not bind themselves to accept the highest or any Tender. Further particulars, with the form of Tender may be had at the Clerk's Office any day between the hours of TEN and FOUR o'clock.
Dated the 25th of July, 1854. B. WELTON, Clerk.

VALUABLE LEASEHOLD WATERSIDE and other PREMISES, at Wapping. The Committee for conducting the affairs of the Royal Hospitals of Bridewell and Bethlem will meet at BRIDEWELL HOSPITAL, New Bridge-street, Blackfriars, on TUESDAY, the 25th [illegible] AUGUST next, at TWELVE o'clock precisely, to receive TENDERS for TAKING on separate LEASES, for terms of twenty-one years the following PREMISES, viz.: The Wharf and Premises on the south side of the High-street, Wapping, numbered 231, 232, and 233, abutting westward on Mr. Joseph Beadnell's premises in the occupation of Messrs. Fletcher and Wilson, from Christmas, 1864; the Wharf and Premises on the south side of the High-street, Wapping, numbered 231, 232, and 233, now in the occupation of Mr. Chas. Morse Hullah, from Lady-day, 1859; the Wharf known as Sharrock wharf, on the south side of the High-street, Wapping, together with several extensive ranges of warehouses or granaries in Newmarket-street and Cinnamon-street, now in the occupation of Mr. Major Usborne, from Michaelmas, 1854; and a small House and Shop, now unoccupied, on the west side of Gravelene, Wapping, numbered 64, from Michaelmas, 1854. Tenders, sealed and endorsed "Tender for Premises at Wapping," must be delivered at Bridewell Hospital, before TWELVE o'clock on the 25th of AUGUST next, and parties offering are to be in attendance. The Committee do not pledge themselves to accept the highest or any Tenders. Printed particulars, with the form of Tender may be had at the Clerk's Office any day between the hours of TEN and FOUR o'clock. B. WELTON, Clerk.
Dated July 25, 1854.

CARSHALTON.—FREEHOLD BUILDING LAND.—TO BE LET or SOLD, in plots, ELEVEN ACRES of FREEHOLD BUILDING LAND, within the parish of the Carshalton Station on Epsom Railway, Epsom from and to and from London daily. Soil chalk.—A plan of the ground may be seen, and particulars obtained at the office of Mr. ROBERT CORBY BAXTER, Architect, 147, Leadenhall-street.

FREEHOLD LAND, WOOD-GREEN, near Hornsey Station.—TO BE SOLD or LET, on Building Leases, with option to purchase the Freehold, THREE eligible PLOTS of LAND, for the erection of Private Residences or Cottages. Also a reserved Site for Public-house, with a considerable side frontage, suitable for shops. Plans may be seen, and particulars obtained, at the Offices of Mr. LAMBERT, Surveyor, 4, New Basinghall-street.

COMMONS.—TO BE LET, on Building Leases, a FREEHOLD ESTATE of about EIGHT ACRES, eligibly situate for the erection of villa residences. The neighbourhood is highly respectable, and six miles only from the Royal Exchange. The new Church adjoining the property in question is on the estate.—Plans may be seen, and particulars obtained, at the Offices of Mr. LAMBERT, Surveyor, 4, New Basinghall-street, City.

EAST-INDIA-ROAD, POPLAR.—TO BE LET or SOLD, a most commodious LEASEHOLD DETACHED RESIDENCE, suitable to a family, if required, two distinct houses, with stabling, can be house arranged with or without the large garden, pleasure grounds, and land, situated within a few minutes' walk of the East and West India Docks and of the West India Dock and Limehouse Railway Stations. For cards to view, apply to Messrs. H. and G. LAKE, Solicitors, New-square, Lincoln's-inn; or to Mr. CARTER, 53, High-street, Poplar.

THE RAILROAD, the STEAMBOAT, and the OMNIBUS.—The ST. MARGARET'S ESTATE, on the banks of the Thames, between Richmond and Twickenham, as laid out with ornamental gardens, is admitted to be one of the most picturesque properties in the vicinity of London for villa residences. Persons desirous of acquiring any of the few remaining eligible sites on this valuable estate are requested to apply to the SECRETARY of the CONSERVATIVE LAND SOCIETY, at the Offices, 33, Norfolk-street, Strand, where every information will be given, and the best mode of obtaining advances for building on any of the society's estates.

ST. MARGARET'S MANSION, near RICHMOND.—The Executive Committee of the Conservative Land Society are now open to OFFERS for the magnificent MANSION, with the whole or any portion of the unsolicited land, including the river frontage.—For plans and particulars of sale apply to G. Mottley, Esq., in the Surveyor, at the Offices, 33, Norfolk-street, Strand. Cards to view the mansion and grounds may be had on application to
CHARLES LEWIS GRUNEISEN, Secretary.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.
Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.
ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.
40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

TO BUILDERS AND OTHERS.
TO BE SOLD, a PIECE of eligible FREEHOLD BUILDING LAND, near Vauxhall, with a large quantity of building materials thereon. For particulars apply to Mr. WALDEN, Surgeon, Holloway's Cottage, Manor-street, Clapham.

TO INDIA-RUBBER MANUFACTURERS, WATERPROOFERS AND OTHERS.
A NEWLY-BUILT FACTORY, contiguous to Westminster-bridge, with a frontage of 75 feet TO BE SOLD, with the connection thereto belonging in consequence of the parties retiring from the occupation of the business; five stories high, with steam-engine and shafting force, and all the machinery requisite for preparing, masticating, and cutting india-rubber in sheets, thread, &c. the whole now in full working order. Term, forty-two years; ground-rent, 85l. per annum.—Apply for further particulars at Mr. LAHEE'S (only) Offices, 63, New Bond-street, London.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames and other plots, suitable for villas of all classes. To BE LET on Building Lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery lane; or to Mr. LONG, Red Lion-street, Richmond.

BUILDING LAND TO BE SOLD, or LET, on long building lease, in plots, at Ealing, Putney, Woodgreen, near Hornsey, Watford, Hereford, Brockley-hill, near Forest-hill, Round-hill-park, Brighton, Enfield, and Castle-hill, Reading.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery lane.

TO BUILDERS, &c.
TO BE LET, on BUILDING LEASE, TWO PLOTS of eligible LAND, at Sutton, in Surrey. The situation is advantageous, being about five minutes' walk from the station and the neighbourhood new and daily increasing. Address X. Y. Post office, Hendon.

VICTORIA-PARK.—TO BE SOLD, about FOUR ACRES of FREEHOLD LAND, fronting the Victoria-park, and within two minutes' walk of the intended station on the North London Railway at Hampton Wick. Particulars to be obtained of Mr. LAMBERT, Surveyor, 4, New Basinghall-street; Upper Tooting, near Wandsworth; and Clapham.

LANDING WHARF and DRAWING DOCK, LETTS'S WHARF, near Waterloo bridge, Surrey side.—Every accommodation is offered at this extensive wharf for landing, shipping, drawing, and warehousing goods. English and foreign timber, iron, stone, bricks, and slates, &c. &c. 150 feet river frontage for floats of timber, large quays, piers, a thirty-ton crane for heavy goods, boilers, &c.; also a ten-ton crane. Apply to ROUTLEDGE and SON, on the Wharf.

COVENT-GARDEN.—Large and Light WAREROOMS and WORKSHOPS TO LET. Apply to Mr. COLWELL, 32, Brydges-street, Covent-garden.

TO FREEHOLD LAND SOCIETIES AND OTHERS.
TO BE SOLD Cheap, about 12 Acres of eligible BUILDING LAND in the most salubrious part of the county of Surrey, near to railway, schools, and railway station. Apply to Mr. JAS. BRAGG, Surveyor, Devonshire-villas, Rotherhithe.

BY HER MAJESTY'S ROYAL LETTERS PATENT.—E. Jaques, Millmongers, Printers, and others using bands for driving machinery are respectfully invited to inspect EDWARDS'S IMPROVED FLAT and ROUND LEATHER BANDS (the round bands from ¼ inch to 6 inch in diameter), which for strength, durability, and simplicity in working surpass any bands at present in use. A circular of prices sent free on application, and parties wanted on with samples if required. Manufactory, 32, Great Sutton-street, Clerkenwell.

TO CAPITALISTS.
TO BE SOLD, a bargain, the HALF-SHARE of a SLATE QUARRY. The property, which is of considerable extent is held under lease for a long term, and from its close proximity to a railway, abundant water-power, convenient sites for deposit of rubbish, &c. possesses great advantages, and offers an opportunity for profitable investment rarely to be met with. For terms and particulars, apply to Mr. A. A. ROBINSON, Slate Merchant, Stratford, near London.

THE FREEMASONS' QUARTERLY MAGAZINE. New series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. V. for April, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and K. SPENCER, 314, High Holborn.

FREEHOLD LAND SOCIETIES.
Now ready, second edition, price 3s.
DRAFT RULES, for the Formation of LAND SOCIETIES, with Suggestions for the Enfranchisement and Improvement of Copyhold and Church Property.
By ARTHUR SCRATCHLEY, M.A. F.R.A.S.
Actuary to the Western Life Assurance Society, 3, Parliament-street, London.
CHARLES MITCHELL, Red Lion-court, Fleet-street.

GUILD of LITERATURE and ART (incorporated by Act of Parliament, 17 Vict. cap. 54), to ENCOURAGE LIFE ASSURANCE, and other provident habits among authors and artists, to render such assistance to both as shall never compromise their independence; and, prospectively to found a new institution, where honourable relief from arduous labour shall still be associated with the discharge of congenial duties. The council is now ready to enrol members, and to receive subscriptions in conformity with the rules set forth in the printed exposition, of the objects and constitution of the Guild. Copies of this document containing the names of the officers and council, and of the subscribers; an abstract of the Act of Incorporation, the proposed bye-laws, and tables of premiums for life assurance, deferred annuities, and the sickness fund may be had, free of charge, at the Chambers of the Guild, No. 10, Lancaster-place, Strand; of Mr. Mitchell, 33, Old Bond-street; at the Athenæum; of Mr. George Simms, Bookseller, Manchester; of Messrs. Webb and Hunt, Booksellers, Liverpool; Messrs. Simms and Son, Booksellers, Bath; Messrs. Evans and Arrowsmith, Booksellers, Bristol; Messrs. Rogers and Fowler, Booksellers, Sheffield; Mr. Sang, Bookseller, Newcastle-upon-Tyne; Mr. Bell, Bookseller, Birmingham; Mr. J. Menzies, Bookseller, Edinburgh; Messrs. Murray and Son, Booksellers, Glasgow; Mr. M'Glashan, Bookseller, Dublin; and also by post, on receipt at the Guild Chambers, of a stamped and addressed envelope.
W. HENRY WILLS, Secretary.

LOANS.—Persons desirous of obtaining ADVANCES, from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, reports, and every information may be obtained on applicat on at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d each copy, or 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

The Builder.

SATURDAY, AUGUST 26, 1854.

WE invite our readers now to enter with us the *Renaissance Courts* of the Crystal Palace. They will miss there the symbolism and pious feeling which they have seen in the works of the earlier period, but they will nevertheless find forms of beauty, and much to interest. We give an engraving of the principal Court,* but shall confine ourselves on the present occasion to some observations on the growth and progress of the style.

Whilst, in northern Europe, one remarkable style of architecture, through its various stages, culminated and declined—in Italy, changes were being effected of very different outward character, but which were not the less destined ultimately to influence England and the whole continent. We have seen that Gothic architecture in Italy was a foreign importation, and it retained that character. It was adopted by two of the religious orders, the Franciscans and the Dominicans, and the labours of the greatest artists of the time were exercised upon it; but the recollection of ancient art, no less than the *prestige* of the Roman name, had survived the long night in which all learning had been eclipsed. The study of the antique revived, though the great works of sculpture in Rome still remained where they had been buried. Even as late as near the middle of the fifteenth century, Poggio Bracciolini could discover but six antique statues.

Early, however, in the thirteenth century, we find that the Pisans had made their commercial intercourse with countries once under the Roman sway, subservient to the collection of a large number of works, and from these the Pisani, though Gothic architects, formed a style of sculpture which had mainly the character of the antique. The predominance of sculpture as an element in architecture remained, the architect and sculptor were one and the same individual, and it must be allowed that never were these two arts in their mutual relations, more fortunately circumstanced, in some respects, than during this early period.

Whatever the merit or otherwise, of the Gothic *architecture* of Italy, or the defects of sculpture in other parts of Europe, as to anatomical correctness, neither art has regained the especial value which it had everywhere by the union under the Gothic system. It is the existence of a purpose which makes high art; and as we have somewhere read, a group without a background seems little more than a chimney ornament at best.

Moreover, there were attributes of excellence which seem to germinate in the early growth, in all countries where art is destined to reach a flourishing state of cultivation. The outline of the matured leaf is not perfected, before the earlier development at the stem has been touched by the progress of decay.

So far, then, as the recognition of certain higher qualities of art is concerned, those are right who have great admiration of the works of the thirteenth century. Unfortunately, however, there are essentials, which some overlook, required to expand the conception of the sketch into the finished work of architecture, sculpture, or painting. It is this technical but necessary process, that later art has to effect. The old spirit will, perhaps, evaporate, but the object is necessarily to be pursued. Incompleteness is ever far from being the purpose of art, and what we admire in the early work—supplemented by our own thoughts—is exactly that which we should not even reach to, by divesting ourselves of what later art has—however unsuccessfully in particular cases—endeavoured to supply. There is a lesson to be gained by observation of certain excellences, but there is no going back.

Doubtless, had the Italian Gothic architecture ever been fully infused with the spirit of the Gothic system, we might have had to regret more than we do its speedy subversion. But the very advantages of position as regards the antique, prevented a full amalgamation between classical architecture and Gothic sculpture. Nicola Pisano, with all his merits as a sculptor, was never either able to dispense with the old *forms*, or wholly conscious of the value of nature *combined with* right use of the antique. His successors lost something of his learning, but gained in that *sentiment*, which appears to have created the beauty of the true Gothic sculpture, far advanced at that early period, as it would seem, even in England. No true union, however, of Italian art and Tedescan was perfected. It was hardly to be looked for, and was, perhaps, not even to be desired.

The revival of classical art was sure at one time to follow the revival of classical learning and literature; and unless we are prepared to consider as an unmixed disadvantage what took place in the one case, we should not repine at what occurred in art. What did occur, in fact, was very different from what has been often represented. Oh! that the "revival" of Gothic architecture in the nineteenth century had as much of the true re-birth as the *Rinascimento* of classical architecture! Modestly called a "revival," developed, indeed, in great part, if not wholly, out of the remains of antiquity, it was a very different thing, alas! from what *we* see everywhere around us. We find it even stated in a recent publication, to which the author's name gives authority, and we know it is no uncommon view, that the characteristic of the Cinque-cento art, "the real goal of the Renaissance," was the exclusion of all elements not of the classic ages. It *may* be so in one sense; but what would modern art be, possessed of a power of recombination, like that which moulded the forms of classical architecture? Such a power is the most valuable of possessions; there is no exercise of genius without it; it is itself invention. Thus the very artists who dug out the fragments of column and entablature from the filth of Rome, who regarded the authority of Vitruvius, or calculated proportions of orders by modules and minutes, were precisely those who year by year, were adding forms and elements, which at least are not those generally characteristic of the old Roman architecture, or of which mention can be found in the works of Vitruvius. Thus, whatever may have been the case as to ornament, the progress of architecture seems to us rather from, than towards the reproduction of the mere classical orders. We should indeed not conceal from those who have studied the orders, as though comprising the whole expression of the Roman style, that there is very much more than these mere forms to be found—both in Italy and the extremities of the empire; and if we suppose that the view of Brunelleschi and his fellows, extended to works of a late period, we may find many of the details which were developed by the mediæval Italians. Still without going very deeply into the question, enough may be found in the architecture of the so-called "revival," that is very different to what we know of ancient Roman examples. Surely, there is such originality of treatment in the Strozzi Palace, and other buildings at Florence and Sienna,—in the rich and boldly-projecting cornices, and in the use of balustrades. The earliest example of the latter, on the Pitti Palace, by those who assume that Brunelleschi had no originative talent, has been supposed to have been derived from some old work; but we are not aware what there is to justify this opinion. Besides, the "balusters" there, are not in one of the usual forms, but are merely diminutive columns.

The architectural style of Brunelleschi was, in truth, a revival of the Romanesque and Lombardic architecture. The old church of the Apostoli at Florence was the type to which he reverted, and the noble church of Santo Spirito has as much due to the artist's mind, as to the basilicas of Rome. To the design of Arnolfo for the dome of Santa Maria del Fiore, which he carried out, he added the *tambour*, or drum of the dome,—a feature not due to his studies of the Pantheon, and the first step to the result attained by the same form as treated by Sir Christopher Wren. Alberti amongst the early architects, and Palladio amongst the later, were not less remarkable for their knowledge of the Roman works; but all that we need say of them here, may be limited to the fact that many of their designs have a certain resemblance to the antique, though they have even more, features of their own. The particular combination of major and minor orders devised by Palladio, as seen in the Basilica of Vincenza, shows very strikingly, how an architect may derive all the members of a composition from previous works, and yet produce an effect truly novel and original.

But we are getting on to the sixteenth century, as it may appear, whilst our present notice should refer to the fifteenth. The truth is that the historical sequence of style is less clearly marked, or at least the architecture has not the character of *regular progression*, such as may be remarked in other cases. Thus the style which we should commonly designate "Renaissance," prevailed down to a late period in the sixteenth century, more especially in France. Some architects, like Cellini, practised two distinct styles,—Renaissance and Italian. The doors in the Italian vestibule in the Crystal Palace, from the Cancellaria, are, not without reason, placed with works of the sixteenth century, though the Roman palace was designed by Bramante at the close of the *fifteenth* century. In the last few years of the fifteenth century even, must we place the earlier works of Raffaelle and Michelangelo.

The history of ornament alone, does not present the same oscillations of influence in its progress: but here we should acknowledge the debt which we think, all students are under to the Professor of Ornament at the Department of Art, whose elucidation of the several characteristics of the Renaissance and its off-shoots, in the course of his lectures, exhibits, we think, perceptive and analytical powers of no mean order. Those who would understand the branch of architecture referred to, cannot do better than examine the collection of casts at Marlborough House, where much will be found that is not at the Crystal Palace; and the Illustrated Catalogue lately published, we may say, contains some portion of the explanation to which we have referred.* The work has a considerable number of illustrations, and is cheap at 1s. We cannot say there are *no* defects of drawing in it; but these are not numerous, and it is, we think, highly creditable to the officers of the department and the young ladies.

Therefore, looking at the Renaissance Court itself,—just as we should have erred in forming ideas of certain other styles of architecture from ornamental details or partial exemplification, so should we misapprehend the character of art during the period which now concerns us, did we regard only the specimens in the several "Renaissance" and "Italian" Courts. As we have endeavoured to show, observation of the mere mouldings and structural members of the archi-

* Board of Trade Department of Science and Art:—"Catalogue of the Ornamental Casts of the Renaissance Styles; being Part of the Collections of the Department." By R. N. Wornum, Keeper. With Illustrations on Wood, engraved by Female Students of the Wood Engraving Class. Published by Authority. Longman and Co.

tecture of the fifteenth century, and of the Renaissance ornament, might lead to opposite deductions.

We are met at once in our inquiry, by the perversions of a phraseology very embarrassing in all cases, to the architectural student, but which we hardly know how to rectify. The term "Renaissance," like many others, has been used in more senses than one. Applied to the revival of classical art, it has been made to embrace—scarcely "an epoch," as we venture to consider, but—a long period of gestation. During this period was practised a varying character of ornament, classed under the other application of the word "Renaissance." We might say, that the progression was *towards* a definite epoch, and *that*—the complete re-establishment of classical art, assumed to be the characteristic of the sixteenth century; and we can indeed hardly attach too much importance to the admiration of ancient literature and art which became one of the great characteristics of the Cinque-cento period. Rome speedily gave forth more of the remains of antiquity than were first found by Poggio Bracciolini. He himself discovered the manuscript of Vitruvius. Men were enamoured of ancient art; studied from it—imitated it. But that was not all. We have endeavoured to show, that the greatest ardour of investigation which perhaps the world has known, did not make men forget that they were artists. There is some resemblance between the frescoes of Raffaelle, in the Italian Court, and the decorations of the Pompeian House, between the designs which he made, and the drawings which he collected from the baths of Titus; but there is not positive identity. The world has said differently: but here is one of the uses of the Crystal Palace: the works are under the same roof, and may be compared. Give all the credit that can be fairly given to the old model, and great will be the evidence of art and of mental conception which will remain. These merits in the modern works are, we may say, accurately set forth in the Handbook to the Italian Court. Therefore, though it is right to say that true Cinque-cento art, as opposed to that called "Renaissance," is characterised by the absence of all elements not those of the antique, it is not to be assumed that *art* was dead; and it is least of all to be assumed in the case of architecture. And that statement is not to be modified by the fact that, as practised, true "Renaissance" and Cinque-cento art were concurrent as styles, and even, as of course also, intermingled.

The earliest architecture of the Renaissance period then was, as we have shown, formed concurrently with a patient investigation of Roman remains. The style of the Roman palaces, availed itself of the best features of the Florentine school, and improved still further in general character, upon the antique. Peruzzi, Sanmichele, Sansovino, and others, all modified details, introduced new forms, and impressed each a different character upon their designs. The same may be said of Palladio, than whom no one was more distinguished for the use he made, at the same time, of the antique. An odd illustration or so, from the progress of structural architecture during the general period of "the revival" has been given in the Italian Courts; and the "Hand-books," with no inadequate skill in moderate space, endeavour to supply the rest. Let us try to give what our readers will expect—our own help to the examination of that which is more sufficiently illustrated.

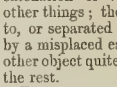
In the architecture of Italy of the period which we noticed in a former article, the principal features had been the scroll-work of foliage —chiefly conventional—and intricate interlacings, in later styles called strapwork. The round arch and the pointed arch were both used, and, in some measure also, the orders. Byzantine and Saracenic influences were both observable.—The next step in ornament was similar to what took place in our own country. Conventional forms were no longer the rule, but natural forms were the direct models of imitation. This new condition is fully expressed in the bronze gates to the Baptistery at Florence, by Ghiberti, casts of which are shown. The originals were gilt.

These gates, the second executed by Ghiberti, were commenced in 1425 and finished in 1452; but the principle of natural imitation had been commenced still earlier by Jacopo della Quercia, who died in 1424. Respecting his influence, we have the direct testimony of Vasari. The altar tomb, however, in the collection was not executed before 1413. During this early period, the Grotesque, improperly termed "Arabesque" ornament, which led the way ultimately to that seen in the works in the Loggie of the Vatican by Raffaelle, seems to have been introduced. The elaborate panels of the pilasters from the Certosa, in the collection, show these several elements of design. The scroll form is, however, common; and here the serpentine character of the Gothic scroll is exchanged for one approaching nearer to the Roman character. Representation, and not symbolism, was the object in the treatment of relievos: and instances of the application of perspective are shown in some extraordinary works in the collection. The arrangement of receding planes was managed with great skill by Ghiberti, but ultimately formed part of that confusion between the several branches of art which has never since, been wholly corrected. The rules of perspective had been lately demonstrated by Paolo Uccello, of Florence, as the "Handbook" says,—by Brunelleschi, according to others. If the former had been the discoverer, as he was born in 1397, the discovery must have taken place early in his life, and close before the application of the principles by Ghiberti. In other respects, the characteristics of the Trecento period were retained, and amongst them, tracery or interlaced work is very common. Mr. Wornum also puts the introduction of the cartouch or scrolled shield—which became so common at a later date, as in the style of James I.—to the date 1450. Medallions with portraits were still earlier. Such was the Quattro-cento style, the commencement of the Renaissance.

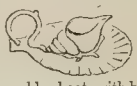
The several elements which have been named, developed themselves with varying prominence, so as to cause remarkable differences. At this period Gothic architecture was in vogue throughout the whole of northern Europe, and it was not till changes were taking place in the architecture of Italy, that the original Renaissance influence passed to France and other countries. Whilst in Italy, a style was developed by the Renaissance in which the cartouches and strapwork were rejected; elsewhere they became the most prominent characteristics; and few persons, unless their attention were directed to the several points in the question, would discover the reason for classing the architecture of the Elizabethan vestibule, skilfully arranged from Holland House, under the same general head of Renaissance, as the elaborate ornament and sculpture of the Certosa at Pavia, or even as that of the Chateau d'Anet and the Chateau de Gaillon. In the sixteenth century, indeed, the cartouche, the scrolled shield and tracery, were the prominent characteristics of the *Renaissance* of that period, rather than the natural, or the revived classical, elements of the same style. Those formed the characteristic of the Cinque-cento. In the English style of the time of Elizabeth, the strap and shieldwork are prominent, whilst in the architecture of James I. the pierced shield alone, is the general form.

We are not likely to controvert the arguments in favour of the union of architect and ornamentist; but it is curious, that whilst the Cinque-cento style produced little that was valuable in the way of furniture; the Renaissance was turned to good account in that respect; and in France it has remained till this day. It prevailed, as we have suggested, concurrently with the production of some of the best works of Italian architecture in France,—so that men like Cellini could be Italian Cinque-centisti in their great statues in bronze, and Renaissance artists in minor metal work and jewellery.

We have thought these preliminary remarks important to a correct apprehension of the several styles exhibited; and in a future article we shall examine what there is in the courts themselves.



Our view represents the Renaissance Court as seen looking towards the nave, and includes the *loggia*. The façade next the nave is from the Hotel Bourgtheroulde at Rouen. The window at the extremity of the view, on the right, is from the Certosa, at Pavia, as are many of the architectural details of the court. Near it is the enclosure of a Well from the Ducal Palace, Venice, surmounted by the figure of the "goose man" from Nuremberg. There is a second Well from the Ducal Palace, on the opposite side. In the foreground are two single figures, female and male, from the series which surround the tomb of the Emperor Maximilian at Innspruck; and behind these are the St. John (left) and the David (right), by Donatello, both beautiful works. The original of the Vase Fountain in the centre is from the Chateau de Gaillon, now in Paris. The copy we have here is in terra cotta, executed by Mr. Blashfield.*



ON THE PRESENT STATE OF TASTE IN ORNAMENTAL DESIGN.†

The putting together of different objects to form a design, is a common fault; and we may see a chandelier, composed of a concatenation of vases, lyres, and other things; the whole attached to, or separated from, the ceiling by a misplaced eagle, a hand, or other object quite at variance with the rest.

To copy some utensil in order to make one for a totally different purpose, and in a different material, is another sign of poverty of invention; as when a porcelain bowl imitates the yellow colour, and the construction of a wooden tub, which is rendered still more objectionable if it affects to be bound with blue ribbons in lieu of hoops. False pretences are always bad, both in a moral and artistic point of view. Of a similar kind is a bed-candlestick, made of two shells, with a branch of coral tortured into a handle;

or a golden boot, with bootjack, intended to decorate a lady's writing-table, and to perform the duty of a box of lucifers; and as Romans sinned in designing for a lamp a human sandalled foot of bronze, the same is adopted by us for some other equally irrelevant purpose. Thus *decipit exemplar vitiis imitabile.*

Nor are we alone in this inconsistency. The combination of incongruous objects is not wanting in France. Thus a clock is composed of unmeaning elements, often with figures equally at variance with the idea, and with the dimensions, of a dial-plate; or it takes the form of a chariot wheel, or a sun flower, for no other reason than because they suit its shape; as the hermit crab takes possession of an unoccupied shell. Lamps and other articles of use, are similarly composed; love of decoration too often in that country overbalancing what is necessary or useful, so that splendid ornaments are frequently contrasted with a deficiency of the most common requisites in the unseen portions of a house. This was also the case in the houses of ancient Rome; and in the same apartments where "gold and ivory shone forth," where the external decoration that caught the eye was splendid and costly, objects not intended to be seen were common and unfinished. It must, however, be admitted that Greek and Etruscan taste had introduced there a prevalence of good form in ordinary utensils; and the saucepan and the strainer, the amphora and the lamp, were as remarkable for their elegance as for their finish; and it would be difficult to find among them the uncouth forms of our wine-bottles, or of the usual utensils in our houses. It was, however, to others more polished than themselves that the Romans were indebted for their selection of good works; and as taste was not natural to them, but acquired, they sought them as a luxury. Greece, therefore, was plundered in order that Romans might gratify a pride rather than a pleasure in their possession. Indeed, they were so far from real appreciation of art, that they spoilt what they borrowed whenever

* Some specimens of terra cotta exhibited by Mr Blashfield in the industrial department deserve notice and praise.

† See page 410, *ante*.

they attempted any change in it, as their architecture sadly demonstrates; and though Horace affects to say they painted and danced more skilfully than the Greeks, they were always deficient in art. Their calling was, as they boasted, conquest; and Virgil has given their sentiments in these well-known lines,—

"Tu regere imperio populos, Romane, memento,
Hæ tibi eruut artes; pacisque imponere morem,
Parcere subjectis, et debellare superbos:"

which end with the most odious doctrine of a savage conqueror, that no mercy was to be shown to a people who dared to defend their liberty.

The Etruscans, on the other hand, appreciated the arts they had derived from Greece; and whether or no an early Pelasgic relationship may have contributed towards their original taste, aided by an influx of Greek settlers at a later period, they became the zealous encouragers of Greek talent, and often its successful imitators. And this, with the pervading Greek element in Magna Græcia, may well account for the taste inherited by the Italians. For though a blank period intervened, taste was *inherited* by them; nor did they imitate the antique without having a capacity for feeling its intention; and while they have surpassed all others in copying from classical models, they have also given to painting a grace of design, and a grandeur of conception, to which no others have attained, and which we may presume was never surpassed, if even equalled, in Greece.

But it is a mistake to suppose that Greek legends alone offer subjects for high art: the history of no country is deficient in them; and many scenes from a Dante, a Milton, a Shakspere, a Spenser, or other poets, and, above all, from the Bible and Testament, are far superior to any of a classical age. Christian story abounds in feelings of a far more exquisite and exalted kind; and it is to be regretted that modern sculpture has been interfered with by the imitation of Pagan ideas. It is the fault of modern days that the antique is too slavishly copied; and that subjects for which we can have no real feeling are forced upon us, to the discouragement of efforts of independent genius. An ideal figure of youthful beauty must be a nymph; exquisite form in man or woman must be confined to a heathen deity; the emblems of death must be Pagan; and that most graceful conception, the angel, must give place to some ancient one, with which we have no kind of sympathy. Natural talent and invention are thus cramped; and the "servile herd of imitators" excite our anger and ridicule, by an exclusive and affected admiration of what to them is a conventional idea.

It is well to contemplate "day and night" the merits of "Greek models," and to comprehend the real sentiments that guided their talented authors; but this differs widely from mere imitation, which, after all, only produces an inferior copy, and depends on the eye, without calling forth the efforts of the mind.

What, indeed, can be more ridiculous than representing our kings and conquerors in the garb of ancient heroes? It only finds a parallel in the Greek temples represented by old masters in scriptural subjects, with the men in mediæval armour; or in that absurd custom (unheeded at the time) of dressing our actors, when in the characters of Cæsar and other personages of a Roman play, in European costume; which we only laugh at now in the "Comic Latin Grammar."

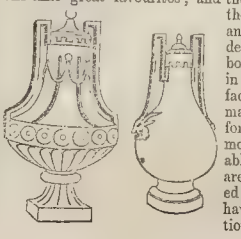
Indeed, the insight we have obtained into Oriental manners, costumes, and scenery, as well as architecture, is of the highest importance to modern artists in the representation of scriptural subjects, and should by no means be neglected.

There is often a tendency in persons, incapable of distinguishing between good and bad art, to censure at first sight what is presented to them, with a view to cover ignorance, and affect discrimination; and if anything can be discovered to excite ridicule, it is eagerly laid hold of to conceal the want of real criticism. This has been fully exemplified in the statue of George III. where the pigtail has served as a most useful scapegoat for ignorance; and the merits of the rider, placed so admirably in his saddle, the resemblance of a horse to a horse (both of them rare in equestrian statues), and the oneness of conception in the whole subject, are unperceived; and even the secondary recommendation it possesses, of not being placed too high above the eye, has been found fault with, merely because custom has sanctioned the mistake of sacrificing art to honour, or to caprice, by an over-elevated position. For it is an obvious error to place an equestrian statue at such a height, that the soles of the rider's boots and the belly of the horse shall be presented to the spectator as its most conspicuous features; or (if looked at from a proper distance), that it shall cease to be distinctly seen. What, again, is more inconsistent than raising a statue on a column? where neither the art of the sculptor, nor the features of the hero, can be discovered; and no greater poverty of invention can be shown, than by extracting one member of a building, and depriving it of the office for which it was created, of supporting an entablature, in order that it may render the individual it exalts almost invisible; while, "*stans pede in uno*," it might be the solitary remnant of a ruined temple. This was the result of Roman bad taste, which also introduced the truncated column to support a bust, in lieu of its own head.

Deficiency of taste, and a total misunderstanding of proper sentiment, are also frequently shown in the treatment of funereal monuments. It is a mistake, and a disagreeable one, to represent the person thus honoured as a dead corpse: this can only convey a painful impression; and it is not his body that was honoured in life, but his virtues, his mind, and the various qualities of his soul. The body is now in its last resting-place,—the grave; but should not be dragged out of it to present an unseemly sight to the spectators, and to be an improper subject for art; and, above all, no skeleton, skull, or bones should disfigure the monument, by detailing the horrid *consequences* of death. Whatever representation is given should have reference to the character of the deceased when alive, or commemorate the affection of his friends and their regret at his loss; and those sculptors were right who alluded to some act of his life, or with proper religious feeling introduced him in a posture of devotion, as in mediæval times.

It is not only the genius for design that is deficient in this country, the English want correctness of eye; and many fail to perceive a false proportion even when pointed out to them. But though accuracy of eye is so important, it is only one of many essentials for attaining to excellence in execution, and for appreciating beauty. The nice perception of the Chinese enables them to copy with surprising accuracy; but still they are deficient in a knowledge of good form; and much has to be learnt before the merits of good design can be understood in decorative art. Still more so in the appreciation of the highest branches of painting; and as the ear may detect the least discord in sound, or an imperfection in time, without attaining to any knowledge of music, so the eye without instruction may remain for ever ignorant of the merit of true pictorial art. This can only be the result of study and well-directed experience; and no one ever was imbued with a real feeling for it until long and diligent attention had cultivated his natural taste.

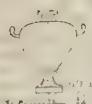
Indeed, the errors that men of celebrity in their day have fallen into, while pronouncing an opinion on paintings, afford a striking illustration of this fact; and it was not till lately that in England the general admiration extended far beyond a Guido, a Carlo Dolce, a Guercino, the Caracci, and some others of the Ecclectic school; and the staple of our collections consisted of Dutch masters, who copied from nature, and not always those subjects most remarkable for refinement. Even now, the generality of those who visit a gallery are far more attracted by the compositions of *naturalisti* than by those which represent a more elevated sentiment; and scenes from common life are general favourites. Such subjects are easy of comprehension; they put before us what we see daily, and know to be truly represented, and it requires little effort of the mind or cultivation of the taste to feel their merit. The appreciation of ideal beauty, and of elevated sentiment, in the composition of a first-rate Italian master is a very different acquirement; and while we may rejoice to find that this is at length beginning to be acknowledged, and even to be considered a necessary accomplishment for all who pretend to judge of painting, it is only fair to admit that it is as yet seldom possessed, and the rare exception to the usual character of English taste. To the *general* public it is utterly unknown; and this is the less to be wondered at, since in a country like Spain, which has obtained eminence in sacred and historical composition, her first artists never attained that same perfection of elevated ideal expression as the Italians; and the Madonnas even of Murillo, with all their sweetness, are merely women. Nor will it be denied that the Beggar-boys of that master, and such like subjects, find far more admirers in this country than his sacred pictures.



It is not surprising that the uninstructed should begin by admiring what they can understand; and this shows the necessity of that tuition which may enable them to appreciate a higher class of art. The most refined nations began with the rudest designs, before they were capable of producing the nobler conceptions of a more advanced age: improvement is the result of time and study; and perfection in the knowledge, as well as in the practice, of art can only be brought about by gradual steps.

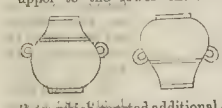
It is curious to observe how some persons in England, who have not had the means of forming correct opinions respecting works of art, begin their experience and gratify their incipient taste. Sensible of their deficiency, and yet desirous of possessing pictures, they abstain from purchasing any which they are unable to pronounce to be the works of old masters, and confine their selections to those of modern painters, by whom they know for certain that they were executed; and such are the prices they often pay, that modern artists have no reason to complain of want of patronage. Nor are good works, or those recommended by the names of men of note, the only ones they purchase: indifferent pictures often take their fancy; and it sometimes happens that the veriest tea-board productions are bought by them at higher prices than are paid at sales for works of early masters, and the purchase of many a painting is influenced by a predilection for some favourite commonplace subject, or by its convenient size.

But my object is to treat of ornamental design and art-manufactures, not of taste for pictures; and following out the negative process, I shall introduce some faulty objects which are to be avoided; beginning with those that err chiefly in want of proportion, as in the four given in this woodcut, which are too lengthy for their breadth.



Some of the most intolerable in form were at one time great favourites; and the richness of their colour, and the evidence of the labour expended in their manufacture, only make their deformity the more lamentable. They are unmitigated horrors, and have the additional fault of

having the union of metal top and handles with a body of porcelain; and many a vase of Sèvres manufacture shows that richness of material is no voucher for excellence of taste.



High shoulders are never becoming, either in a man or a vase; but when meretricious ornament is added, and that in bright metal, as brass or or-molu, the deformity is still more glaring; and a vase made of a shell bound in metal, with rampant dragons for handles, is a still worse instance of inadaptability and bad taste. Sometimes a

headless hybrid, between a bottle and a cup, reverses the extravagant breadth from the upper to the lower extremities; but whether placed on its head or on its foot, it offends equally against all beauty of form; and I have seen one of these which courted additional censure for having its two ill-placed handles in the shape of elephants' heads. Nor will a whimsical character or elaborate finish compensate for the absence of true principles of design: nor because one is faulty in one way must another be perfect because it avoids the same defects; and heavy rotundity may be deficient in grace while it departs still further from it in its tasteless adjuncts. Nor will antique details reclaim what is faulty, still less when they are badly copied; and if masks for handles are an unpardonable misapplication, they become doubly offensive when they caricature what they pretend to imitate. Arbitrary deformities too often shift their places with suitable caprice, and thus some vases appear to borrow from a companion a cup to stand upon; while others take a neck from one, a body from another, and a foot from a third, all of different characters, by way of variety.

G. W.*

THE SMALL DEGREE OF TEMPERATURE THAT AFFECTS A METALLIC BAR.—The report of the committee on weights and measures states that the effect of a change of 0.01 deg. or 0·02 deg. Fahrenheit, is sensible in the measure of the length of a bar.

* To be concluded in our next.

CHIT-CHAT IN OUR OWN PROVINCE.

THE building for the Paris Universal Exhibition is making rapid progress. Two or three correspondents have asked for information as to the asserted failure of the great central roof. One writes,—"I examined the roof myself very carefully after the accident, and have my own views on the subject; but I feel more anxious to suggest, through your valuable journal, a faithful investigation of what really did happen, than to indulge in what I may believe to have been the cause of it. The accident was undoubtedly one of a very serious character, and its investigation would be of much professional interest." If we understand rightly, it was the effect of a storm. We shall be glad to receive the particulars. Probably there was a report on the subject to the French Government. We have no reason to doubt that the whole is perfectly sound at present, but we are told that the iron ribs forming the roof are twisted to an extraordinary extent. There seems to be some contradiction in the aspect of the structure. Viewed externally, it is a stone building: internally, it is a construction of iron. Knowing the taste of our neighbours, we nevertheless anticipate it will be an interesting work when finished.——A paper has been started, called, *Le Palais de l'Industrie* (the specimen number is before us), which is to be the organ of the exhibition, and moreover to represent "those liberal ideas of commercial enterprise, those friendly rivalries, and those discoveries, which result from exhibitions like that held in London in 1851." The English department is to be edited by Mr. W. Blanchard Jerrold.——The illuminations and decorations in Paris last week on the occasion of the emperor's birth-day *fête* showed much art.——Talk of *art*, indeed! Just look at the lamp-post put up at Whitehall, opposite the Horse Guards, and see how much art can be found in that. We should be glad to know what board or department is entitled to the credit of having erected this piece of unfit ugliness. The Government Department of Art might give an eye to such matters, if it be too expensive to employ an architect.——The lecture by Mr. Scott, at the Architectural Museum, Parliament-street, on Monday last, was well attended by men of all classes, including a good sprinkling of those for whom these lectures are intended, namely, the workmen. It treated of the progressive changes in ornament in the successive styles of mediæval architecture. It will receive proper attention at our hands before long. At the close of it, the Rev. Canon Woodsworth took occasion, Westminster Abbey having been spoken of, to urge that the defacement of the abbey with inappropriate monuments had been the act, not of the chapter, but of those who were now finding fault, namely, the omnipotent Parliament of England. There were some good specimens of wrought-iron work exhibited, a little overdone, without the maker's name, and some brass standards for Newark Church, by Messrs. Skidmore and Son, of Coventry, which deserve praise. The opening lecture at the museum was by Mr. E. W. Cooke, A.R.A. and treated ably of the use of natural productions as the basis of ornament. Mr. Cooke is an ardent student of nature in every form, and brought all his collections to bear illustratively on his subject.——Mr. Cockerell's lecture we shall give *in extenso* next week.——A knowledge of *construction* is evidently not universal. Here is a paragraph from the programme of the Greek University, given in the *Times* the other day:—"Justice, that holy arch, that sacred tie of society, is the corner-stone of our public liberties. We shall respect, and cause to be respected, the independence of the tribunals employed to administer it." Justice is a "holy arch;" an arch is a "tie;" and a tie is a "corner-stone." Very clear, gentlemen, certainly!——Operations are going on in Threadneedle-street, at the back of the Royal Exchange, which will quite change its appearance. Mr. Hardwick is putting up a building for the Australasian Bank (at the corner of Finch-lane): next to this, westward, is a stone-fronted house for Mr. Banister, for whom Mr. Henry Currey is the architect; and farther westward still, a large house of irregular shape, which makes it look like two, is being erected for Mr. Lemann, under direction of Mr. John Shaw. The latter is of brick, with a dash of colour. The line of frontage is set back very considerably, so that Threadneedle-street will have a wide mouth. It is to be hoped that some consideration will be given to the necessity of preserving air-way at the backs of the houses as well as in the front. On this head we would refer to a letter signed "Oxygen," in another part of our paper, for which we would especially ask the attention of the Merchant Tailors' architect. —— In Throgmorton-street large offices are being erected, under the direction of Mr. J. J. Cole, architect, for Messrs. James Capel and Co. which have internal arrangements deserving of future consideration.——In New Cannon-street, warehouses and offices are still being erected, costly, and for the most part destitute of a bit of beauty.——Touching abuse of one's town, Professor Aytoun (some of our readers will remember his lectures at Willis's Rooms), has been amusing a select circle of readers, under the name of Percy Jones, with what he calls a "Spasmodic Tragedy,"—Firmilian; and being, perhaps, somewhat "riled" by Mr. Ruskin's abuse of Edinburgh, brings that writer to the stake as a heretical "graduate," and thus describes his last doings:—

"FIRST GENTLEMAN.
Did he confess his guilt?

SECOND GENTLEMAN.
In faith, not he!
His speech was worse than any commination.
He curs'd the city, and he curs'd the church
He curs'd the houses, and he curs'd their stones.
He curs'd, in short, in such miraculous wise,
That nothing was exempted from his ban.
Then, sir, indeed, the people's wrath was roused,
And a whole storm of cats came tumbling in,
Combined with baser missiles. I was fain,
Not wishing to be wholly singular,
To add my contribution to the rest.
Yet he curs'd on till the Familiars gagged him—
Bound him unto the stake, and so he died."

Poor Mr. Ruskin! But he will live through it. The tragedy, "Spasmodic," does not seem to us to bear out the professor's reputation. And with this morsel of fault-finding we will end our present chit-chat.

THE MERCHANT TAILORS IN THREADNEEDLE-STREET.

ON Monday a large board was affixed to a part of the Merchant Tailors' premises immediately to the left of their grand entrance in Threadneedle-street, informing the public that "this house and extensive back premises" were to be let on building lease. A few years since this wealthy company let on building leases the few feet in depth of frontage before their ancient and in some respects fine, hall, so that it is entirely hidden from public view. Not content with this, they now wish to cover a breathing place, the only one left, within the large stack of building surrounding their hall. This is to bad. On no principle can it be defended. The company possess the "potentiality of wealth beyond the dreams of avarice." As a question of finance it is quite contemptible: to their surrounding tenants it is altogether unjust; and as a question of public health the "court" should really be ashamed of themselves. To you who have done so much for metropolitan improvement, both artistic and sanitary, this appeal is made for health. Do get us poor creatures who are penned here for eight hours a day, little fresh air, or room to breathe the poor stuff we are obliged to inhale.

Instead of troubling you I would appeal to the livery had they the power; but, poor things, except being invited to dine twice or thrice a year, they know nothing of their own affairs. Instead of being asked by the court, when a vacancy occurs, to recommend one of their own body for election, the remaining members of this select body fill up the vacancy without consulting the large and respectable body of livery at all. Had the livery looked after their own interests it is probable that instead of being called upon to take their mess of pottage instead of their birthright, and applaud the miserable commonplace which is heard from the "court table," there would be chosen by popular election men who could turn the wealth of the company more to the livery's advantage and to public improvement.

OXYGEN.

AN ACCOUNT OF DUNDRY STONE.

I HAVE examined the stone quarries and old buildings on Dundry-hill, near Bristol. The Dundry stone is of marine origin, and forms part of the lower oolitic rocks, resting immediately upon lias. It seems to be a good shelly oolite, of a light brown colour, with a slight appearance of lamination, or "sand beds." The component parts are almost entirely carbonate of lime, in the form of ova, and small fragments of shells. The interstices generally contain a sort of earthy ochre (iron alumina), in a powdery, loose, incoherent state: with this exception, the stone is firmly consolidated into a mass, with a strong calcareous cement.

There are several very extensive quarries in the immediate neighbourhood of each other, on Dundry-hill; some open, others subterranean; and, judging from the inequality of surface, which is now covered with vegetation, including many large trees, no doubt immense quantities of stone have been obtained in this district, from a remote period. The quarries are covered with a head of earth, and thin rubbly limestone, averaging from 6 to 12 feet in thickness: there are several beds, which are nearly level: in some places the corresponding beds are inclined to the horizon, at an angle of 20 or 30 degrees. The beds vary from 1 foot to 3 feet in thickness. The joints are very irregular, but large stones may be obtained, occasionally, from all the beds, even from those near the surface of the ground, large enough for the usual architectural, and general building purposes. There does not appear to be any important difference in the quality of the various beds: some are rather more shelly and coarse than others; but in all oolitic limestone rocks, similar to those at Dundry, the most durable stone is obtained from the uppermost beds. They are sometimes too coarse for minute work; but the finest grained stone of the oolitic series will seldom resist weather in exposed situations, so well as the coarser and more shelly kind.

The coarsest varieties of Dundry stone resemble in many respects the stone which is obtained from Ranville, near Caen in Normandy, and which has been extensively used for docks, piers, sea-walls, &c. at Havre de Grace: it has also been used in the construction of the new harbour at Dover. In all cases Ranville stone appears to stand wind and water amazingly well; and by analogy I have good reason to suppose that the rough-looking Dundry stone might be advantageously used for similar purposes.

On viewing a vertical section—that is, a plain face across the beds of this stone—something like an irregularly laminated formation may be observed; consequently it may be imagined that it is important to place Dundry stones in a building on their natural bed; but in cases where long stones have been required for an upright position, such as mullions and jambs of windows, &c. the Dundry stone has been used with complete success. In the old buildings hereafter named, many instances may be seen where the stone has been long exposed to the weather, in a vertical position, without any appearance of exfoliation or decay on one surface more than another; therefore I consider it may be safely used in any way, without reference to its position in the quarry.

The identical specimen examined and experimented upon was selected by myself as it lay in the rock, never having been disturbed. It was forwarded direct from the quarry to London for this especial purpose, and may be considered a fair average sample of the stone which the quarries respectively produce. There is no reason to suppose that, in chemical composition, or physical properties, the stone from any of the other quarries differs essentially from this. The avoirdupois weight, or density, absorption, &c. were ascertained with an accurately squared 6-inch cube (1-8th of a cubic foot): the specimen was first weighed in the state in which the stone is usually employed for masonry, having only been squared and placed under an open shed, exposed to the atmosphere for a week, and found to be 15 lbs. 12 oz. 4 dr. The same cube was then immersed in water twenty-four hours, so as to become well saturated, and the weight ascertained immediately after it was taken out, and wiped with a dry cloth: in this state it weighed 16 lbs. 13 oz. 12 dr. It was then thoroughly dried in a hot air chamber for several days; in the meantime being frequently weighed, until ultimately it ceased to decrease in weight: it then weighed only 15 lbs. 8 oz. 10 dr. Thus it will appear that the weight of a cubic foot of Dundry stone, in its ordinary state, is 126 lbs. 2 oz.; when thoroughly wet, 134 lbs. 14 oz.; when dry, 124 lbs. 5 oz.; and that a cubic foot of the stone will absorb 10 lbs. 9 oz. of water; which is, by measure, rather more than a gallon in the foot. This may seem a large quantity, but many stones are much more absorbent: for example, some of the varieties of Caen stone will hold as much as 16 lbs. of water in a cubic foot. A stone may be very porous, consequently very absorbent, and yet extremely durable. Its durability depends upon the cementing substance, which holds the grains together, being strong enough to resist the chemical and mechanical actions of wind, rain, frost, &c. By this statement, I do not mean to infer that absorption is a desirable quality: a stone may be comparatively like a sponge, and yet last for ages, without any material decomposition; but if two kinds of stone were equal in every other respect, that which soaks up least water will certainly be the most durable.

The Dundry stone appears to have been the principal material used for architectural and ordinary building purposes in the neighbourhood of the quarries during a very long period, consequently there is sufficient evidence as to its durability and fitness for masonry or ornamental works. The dwelling-houses, boundary-walls, and other buildings throughout the village have unquestionably been constructed many years since with stone from quarries in the vicinity: in all these erections scarcely a trace of decay is visible, although evidently used without judgment or selection. The poor-house of the parish is an old building with a four-centred arched doorway, not less than two centuries old, the masonry of which is at this time in excellent condition. In the churchyard, lying on the ground near the south porch, there is a large cubical block of stone, measuring 4 feet 6 inches by 4 feet 6 inches by 3 feet 6 inches, and weighing about 5 tons, probably used by our ancestors as a pay-table, which is as free from decay as when first placed there. Near the west door of the church are the remains of an ancient cross of large dimensions, and considerably ornamented: it has been re-constructed and some parts left out, but the stone is in fine preservation. As is generally the case in a parochial district, the most important edifice at Dundry is the village church, erected during the thirteenth century: the tower, of about the fifteenth century, is in parts minutely elaborated, and nearly covered with lichens: it is surmounted with clustered pinnacles and battlements perforated so as to present an exceedingly light and delicate appearance, more like metal-work than masonry: inscriptions on these open parapets and turrets inform us that some were repaired in 1632, others in 1827: a few of the stones are harder and more shelly than others, but all seem to be of the same mineralogical character, and present the same weathered appearance as if likely to last for ages. Situated on the top of a lofty hill, completely insulated, therefore exposed to all aspects and the most severe weather and atmospheric influence of all kinds, Dundry Church tower has borne the rude blasts and tempests of four centuries without exhibiting any material dilapidation or disintegration of the stone. Viewing this sacred structure collectively, it may be considered a satisfactory example of the durability of stone from some of the neighbouring quarries; for although the building is slightly decayed in some parts, it is nearly perfect in others.

I have not prolonged this report with a detailed account of elementary particles, because I do not consider that chemical analysis will render much assistance in determining the goodness of a stone for architectural purposes. The most accurate investigation of a chemist will give no certain test, either of resistance to atmospheric influences, or of rapid disintegration, when exposed to weather. The same elements, united in the same proportions, do not necessarily generate the same body: common white chalk, Carrara white marble, and many other varieties of limestone, when chemically examined, are all found to be composed of very nearly the same elements, consolidated in the same relative quantities; yet we know they produce substances totally different in many respects. The precise causes of decay or of duration in mineral bodies, such as building stones, are so complicated, that they often baffle our endeavours to represent them and their reactions by exact chemical formulæ: it is by some mysterious process of nature, which we do not at present understand, and generally cannot imitate. Nevertheless, the visible distinction between durable and perishable stones may frequently be correctly ascertained, if diligently sought for.

According to traditional reports, it is generally supposed that the Church of St. Mary Redcliff, at Bristol, was constructed with Dundry stone; but upon comparing the condition of the stonework of the sacred structure at Bristol with that of the church and other buildings in the vicinity of the quarries, I have great doubts upon that point. The two buildings are about the same age: the stone of one is comparatively perfect, whereas that of the other is in so decayed a state, as to be considered dangerous to those passing near it: hence, they cannot be of similar materials. And it would be unreasonable to suppose that the church of Dundry, situated on the summit of a lofty hill, and erected when the roads were so bad as to render the carriage of heavy stones up so steep an eminence almost impracticable, was constructed with any other materials than such as were to be procured upon the spot, and which were, in every respect, fit for the purpose. Therefore, it is pretty certain that the church of Dundry is built with Dundry stone, and that the church of Redcliff is built with a very different, and certainly a very inferior, material.* CHARLES H. SMITH.

PROVINCIAL NEWS.

Haverhill.—The first stone of new gasworks has been laid here.

Beccles.—The gas and water company have proceeded so far as to make a first call of 3*l.* per share. As the works are by no means of an extensive character, it is hoped that they will be speedily completed.

Castle Donington.—Successful progress has been made with a subscription for the erection of parish schools here, and the committee were to have the foundation-stone laid on 22nd inst. The design of the building (which is intended for 260 children) is the production of Mr. T. C. Hine, architect, Nottingham. The site is near the old castle.

Salisbury.—The chapel attached to the hospital of St. Nicholas, East Harnham, supposed, from its style, to be coeval with the cathedral, is being re-roofed and re-stalled with oak, and entirely restored, at a cost of 1,000*l.* by the Master, the Rev. G. E. Howman, Rector of Barnsley, Gloucestershire, under the direction of Mr. Butterfield.

Nantyglo.—The new church here has been opened. It was built by subscription—one-half the cost being subscribed by the Messrs. Bailey, and the remainder obtained by the Rev. D. Morgan, the incumbent of Nantyglo, in public subscriptions, and donations from building societies, &c. The design was furnished by Mr. Daniells, of Crickhowell. The style is modern, with a gallery at one end; and the material is blue and white limestone. The internal painting, which is of an oak colour, was executed by Mr. Saunders, of Brynmawr. The iron railing outside was presented gratuitously by Mr. Henry Bailey. The edifice is calculated to hold about 600 persons, and the expense of its erection was 1,300*l.*

Rhyl.—The town improvement commissioners have at last entered into a contract for the erection of the Town-hall and covered Market-place. The foundations are laid out, and the works are to be proceeded with at once.

Chester.—The church at Ince, which has

* A note of a visit to Dundry, and a view of the church tower, will be found in our Vol. VIII. p. 310.—ED.

been rebuilt after the designs of Mr. Hodkinson, of this city, architect, was consecrated on Tuesday in last week by the Bishop of Chester. The church is perpendicular. The nave has been entirely rebuilt from the foundations, and the tower and chancel have been restored, with a new roof to latter. The restoration has been effected at the sole cost of Mrs. Parke, of Ince Hall.

Barnsley.—It is finally agreed that the new east window for St. George's Church, in this town, is to be executed by Mr. Hardman, of Birmingham. There were two other competitors—Mr. Wailes, of Newcastle, and the St. Helen's Plate Glass Company.

Bacup.—The Bishop of Manchester consecrated the new church here on Monday week. Christ Church has been erected at the sole expense of the Rev. James Heyworth, of Henbury-hill, near Bristol, at a cost of upwards of 3,000*l.* in addition to his giving the site. Mr. Heyworth has also invested 1,500*l.* as an endowment, and 200*l.* as a repair fund for the church. Messrs. Sharpe and Paley are the architects. The church contains sittings for 500 persons, 168 free.

Blackburn.—Plans for additional lunatic wards to the workhouse here have been presented to the guardians by Mr. Walsh, architect. The erection of a new workhouse, instead of laying out money on the old building, is talked of. It is urged, however, that there is immediate need for increased accommodation for lunatics, and the estimate having been limited to 300*l.* it was agreed to unanimously, and the clerk was ordered to advertise for tenders.

Halifax.—The inauguration of the Halifax Waterworks took place at Ogden Clough, near Ovenden, on Friday last, by the ceremony of laying the first stone of the crowning arch of the Ogden reservoir. The whole of the town council, besides the borough magistrates and several officials connected with the town, took part in the proceedings. The Ogden reservoir, when completed, will cover forty acres of ground, and contain some 300,000,000 gallons of water. This is the compensating reservoir, formed partly to supply the town, and partly to supply the millowners. The Ogden tunnel will be 537 yards in length, and go through the hill to Mixenden. This tunnel will be 3 feet circular. Beyond Moor End is another tunnel 940 yards in length. At Ramsden Wood there is forming another reservoir as a service reservoir to contain the spring water, which will be conveyed to Victoria reservoir. The tunnel to Ramsden Wood will be 2 by 3 feet in width, and 2,950 yards in length. The length of these open cuttings and tunnels, added together, make 7,750 yards to Victoria reservoir, or something like four miles in length. The town has been hitherto supplied with 63,000 gallons of water per day for all purposes, or about two gallons per head per day. When the present works are completed, the supply will be 1,450,000 gallons per day, or to each individual forty gallons per day, and to families of five each, an average of 200 gallons per family per day.

Doncaster.—On Monday week, a meeting of the local Cemetery Commissioners was held, to receive tenders for the erection of the boundary wall. Messrs. John Wardale and George Gill, Mr. John Elsworth, Messrs. John Green and George Cooke, Mr. W. Wray, and Mr. Enoch Price tendered for the work. The competition was unanimously decided in favour of Mr. John Elsworth. The most remarkable part of his offer, says the local *Gazette*, was, that he would build and complete the undertaking for 6s. less per rood of walling stone from the quarries of Warmsworth than those of Cusworth, although at the latter he had the use of the stone at a nominal cost to cover the expense of getting. The distance of the two places, and the hard nature of the stone of one in comparison with the other, more than counterbalanced the value of the material. The contract is to be completed with as little delay as possible.

Coatham.—The new church at Coatham, near Redcar, was consecrated by the Archbishop of York, on Thursday in last week. The site of the church and churchyard, as well as the entire cost of the building itself, have been given by Mrs. Newcomen, of Kirk Leatham Hall. The church is in the Early English Decorated style. There are two principal entrances, one on the north side under the tower, which latter, when complete, will be 112 feet high; and the other on the west side through a plain porch, on the top of which is a foliated cross. The entrance to the churchyard is through a lych gate, built of oak. The interior of the nave is 61 feet high. There are also two aisles on each side, and a clerestory above. The chancel is 27 feet high, and the floor consists of tessellated pavement, supplied by Minton and Co. of London. The floor of altar is of same material, with Scriptural figures and emblems. A wheel window, to be filled with stained glass, is placed at the end of the altar. The apex of the chancel terminates with a foliated cross. There are no galleries. The columns terminate in foliated capitals, the labels ending with the figure of each of the Apostles. These consist of Caen stone. The roof is stained mahogany colour. The church will be heated by hot water from beneath. Pipes are also laid down for gas. The seats are open stalls, mahogany stained, and will accommodate 680 persons. The windows are of diamond plate glass. In the clerestory these are equilateral. In a few months it is expected the building will be quite finished, when it is anticipated a peal of six large bells will make the whole complete. The cost will be about 4,000*l.* in addition to which Mrs. Newcomen has endowed it with 50*l.* a year out of freehold land in the neighbourhood. There is also provision made for repairs. The architects are Messrs. Coe and Goodwin, of London; contractor, Mr. George Beadnell, of Brotton; Caen stone work, Mr. George Brady, of London; carving in Caen stone, Messrs. Boulton, of London; carpenters, Messrs. Laing and Wilkinson, Coatham; slater, Mr. Percy, of Stockton; plumber, Mr. Goland, of Skelton; glazier, Mr. Bulmer, of Redcar.

Batley.—A public hall has just been completed in Batley: it has been erected principally for the accommodation of the Mechanics' Institute. The style of the building is Italian, and it contains a news-room, library-room, lecture-room, class-room, ante-rooms, a room for the Local Board of Health, a house for the keeper, and a large concert-room capable of seating 600 persons exclusive of the orchestra. The latter room is lighted with two sun-lights, each consisting of sixty-three gas jets, fixed in the ceiling. The room is 22 yards by 12 yards. The funds required for its erection have been raised by means of shares of 2*l.* each; the total cost being about 2,400*l.* The architect was Mr. M. Sheerd, jun.

Ormesby.—A new town is to be built on the property of Capt. Pennyman, at North Ormesby, near Stockton. Sites for 300 houses are already marked out, together with a church, market-place, and other erections, and it is expected that in two years the whole will be occupied. The discovery of iron ore in this district is said to have imparted extraordinary value to all the adjoining property.

Lambton Castle.—It is reported that Lambton Castle is in a critical state, owing to some of the main walls having sunk to a serious extent, and affording reasons for caution, if not for alarm. It is believed that the workings of a neighbouring colliery have been carried under the entire house.

Arbroath.—The mason-work of most of the new public buildings in this town, says a local paper, are now advancing towards completion. Among the more conspicuous are noticed the market-place, the British Linen Company's bank, a factory belonging to Mr. A. Lowson (this factory, which is three stories high, will be the largest in the town), a goods station in connection with the Dundee and Arbroath Railway. Tenders have been received for widening the Brothwick-bridge. The alterations contemplated are widening the bridge, and raising a parapet. This improvement will be made partially at the expense of the British Linen Company, whose new bank it fronts.

Stirling.—The foundation-stone of a new high school was laid on Thursday week with great ceremonial observance. The site is in Cowane's-yard, and was given free by the town council besides a donation of 100*l.* The basis of the building fund consisted of 1,000*l.* granted by Colonel Tennent in 1852, and which has been increased by subscription to nearly 5,000*l.* The design was furnished by Mr. Hay, of Liverpool, architect. The building will consist of four sides of a square, the higher portion of the elevation, for a large hall, fronting the entrance.

AN ARCHÆOLOGICAL QUERY.

WAKEFIELD.

In the *Journal of the Archæological Institute*, vol. ii. pp. 101-104, is a notice of a work by Messrs. Buckler, on the Wayside Chapel on Wakefield-bridge. From this it appears that the authors assign its erection to the time of Edward II.: the writer of the notice is, however, inclined, "upon the evidence of costume," to assign it to the latter half of the fourteenth century, and the reign of Edward III. The Handbook for the Mediæval Court of the Crystal Palace states it to have been built by Edward IV. for the souls of his relatives slain at the battle of Wakefield, December 31, 1460. I believe that this is the popular opinion; but is it not erroneous? And has it not originated in the founding of a royal chantry by Edward IV. in the already existing chapel? There can surely be no difficulty in discriminating between a building of the time of Edward III. and one erected a century later. Will some correspondent kindly inform me whether the Handbook is not in this instance incorrect?

In the same Handbook, p. 61, Southwell Minster is spoken of as being in Lincolnshire instead of Notts. I mention this that a manifest, though trivial, slip of the pen may be amended in a fresh edition. Beta.

EVASION OF THE "SMOKE ACT."

It is too apparent that up to the present time the intolerable London smoke is as thick as it was prior to the "Smoke Act" coming into operation, and the wholesome provisions of the Act are set at defiance by the smoke-makers. From Chelsea to London-bridge the river is at times enveloped in smoke. Gas-works, waterworks, distilleries, breweries, potteries, and all sorts of factories, emit more smoke than usual, as if daring the Home Secretary's mandate. The bakers have united to oppose the Act in a way truly formidable, for it is said that the whole of the metropolitan bakers have resolved to close their shops upon the first conviction of one of their fraternity, and not to open them until they are absolved from the provisions of the Act. Lord Dudley Stuart brought the bakers' case before the House of Commons, and stated that none of the appliances for the consumption of smoke were applicable to their oven furnaces. The Home Secretary admitted there were some difficulties in the way, but invited the bakers to the Home Office to inspect a smoke consumer which would obviate the difficulty. The sugar bakers at Whitechapel have not attempted to comply with the Act, and the immense volume of smoke from their not over tall chimneys at times is unbearable. The steamboats above bridge still favour passengers with smoke and steam combined. The Chelsea fleet, by the bye, have risen their fares twenty-five per cent. upon the pretence of dear coals and the rapid combustion by the smoke apparatus. This is not defensible: the Crystal Palace brings an immense increase to their traffic, for it appears that since its opening no less than 200,000 passengers landed and left one of their piers for the Surrey side.

It does not appear at present whether the Home Secretary intends to let the Smoke Act become a dead letter. It is to be desired that some stringent measures should be enforced to abate the nuisance.

The Masons' Strike at Doncaster Church.—The masons employed at the rebuilding of the Doncaster parish church, having struck work on the refusal of their employers to agree to their demands, have published an explanation, in which they state these demands to be that no rubble wallers or others shall be employed by the contractors in doing masons' work, that names be called over on masters' time, and that work begin on Mondays at 7 a.m. and end on Saturdays at 4 p.m. They also complain of their employers discharging five of their number as leaders in the disagreement. The contractors have since been procuring new hands at 4s. 6d. a day, the wages paid to the turn-outs.

THE BENVENUTO CHAIR IN THE CRYSTAL PALACE, SYDENHAM.

[For Page 452, note.]

THE GENERAL BOARD OF HEALTH.

MR. J. F. CAMPBELL, barrister, late secretary to the Duke of Argyle, is appointed assistant secretary to the Board, at 600*l.* per annum; Mr. H. Austin, C.E. consulting engineer, at 1,000*l.*; Mr. Ranger, C.E. superintending inspector, at 800*l.* Mr. Rammell and Mr. R. Rawlinson, late superintending inspectors, were offered appointments, and have declined. There are to be two superintending inspectors. One appointment remains to be made. The appointment of Mr. Tom Taylor, as secretary, with salary of 1,000*l.* per annum, was announced earlier.

CONFESSIONAL WINDOW, BUCKLAND CHURCH.

AN ancient window has been discovered in Buckland Church the construction of which leads to the supposition that it was intended to serve as a confessional. This name has no doubt been assigned to many "low windows" and "lychnoscopes" that present no characteristic features of the confessional. But in this respect the window in question may possibly be unique. The glass line is external to the saddle-bars, which clasp the upright stanchion of iron in the usual way by means of collars. These collars, therefore, project through the plane of the casement, and show that the window could not have been glazed continuously from side to side: the upright bar also rises out of the centre of the glass groove,—another proof that the centre line of the window must have been open from top to bottom, while the width of the foramen would correspond with the thickness of the saddle-bar collars. The window was undoubtedly glazed, for when it was discovered strips of lead still remained attached to two of the bars, the casements having been torn away from their ties. It should also be remarked that iron hooks appear on the frame of the window, indicating the use of a shutter, which was manifestly required for the imperfectly glazed opening. The rebate into which this shutter closed forms the internal reveal of the frame.

Further, this window was one of more than usual importance; for when the grout work was cleared away from the splayed niche formed in the thickness of the wall, the splays were found to be smoothly stuccoed, and embellished with outlines of considerable elegance, in deep carmine; the Virgin and Child being represented on the east side, and a female figure, coronetted and kneeling with the hands joined in prayer, on the west side. Each of the heads is encircled with an aureole, that around the Saviour's head being broken into rays. It also appears that this window had been subject to great violence; the casement had been torn from its place, the internal arch (of clunch) was shattered and cut back behind the plane of the wall surface, and the label (a continuation of the string course) was cut away and plastered over: one piece, however, escaped, having been broken off and used to fill a hole left by a dislodged portion of the label, and from this piece the label has been reconstructed by a clever and experienced mason, Mr. Whitehead, of Royston. The springing stones of the arch were found *in situ*, showing splayed stops, while the mutilated arch formed a camber-headed opening.

Now, if the window were glazed in the manner indicated by the glass groove and saddle-bars, the glass being either coloured or opaque, such a niche would exactly answer the purpose of a confessional. The mural drawings show that it was of more than ordinary importance. The determined mutilation of the window, and its careful obliteration by being blocked in with flint and mortar and smoothly rendered like the rest of the wall, within and without, would indicate that the associations connected with the window caused every trace of it to be carefully concealed when these associations were no longer tolerated.

In any ordinary case it might not be intelligible why the penitent should be sent into the open air to confess, but in this case there would be a peculiar propriety in such an arrangement, for a nunnery formerly existed at Buckland, dependent upon the foundation of the Knights Hospitallers in London, and this window would permit the nuns to make their confession to the parish priest without appearing in public. The foundations of this nunnery are still to be traced in the mounds and moats of the adjoining "Bury-yard," the term "Bury" being the Saxon "Burh," or mansion.

If I am wrong in calling this window a confessional, I shall be glad to be corrected by some one of your correspondents, who will also perhaps favour me with the probable reason for the very peculiar position of the glass groove with reference to the saddle-bars.

Buckland Rectory. W. W. HARVEY.

THE FIRE AT THAMES-BANK.

WE are glad to find that the statements which have been made as to the probable amount of loss to Mr. Cubitt, caused by the late disastrous fire, are much exaggerated. Still it will be heavy. Having confidence in his arrangements, only a small sum was insured upon the buildings, something under 7,000*l.* on the parts actually damaged; and there was a larger quantity of prepared work on the premises than usual, including a number of sashes glazed with plate-glass. The buildings destroyed, or nearly so, occupy the areas, 220 feet by 60 feet; 48 feet by 120 feet; and 50 feet by 120 feet; partly three stories in height, partly four; and including the machine-room. The parts destroyed form perhaps one-fifth of the whole of the buildings on the ground. The men's cooking-place and the dining-room, which latter is used as the school-room in the evening for the boys, escaped; so too did the foundry, the drying-rooms, engines, &c.

No time was lost in useless lamentation: the whole of the men engaged at the time of the fire, 609, were set to work on the rebuilding and in such shops as remained, and now there are even more employed. The girders and joists for the one-pair floor of the joiners' shops are on, and, in a very short time, the whole will be restored. So much for the owner's well-known energy. Some of the daily papers have stated that, "previous to the commencement of clearing the ruins, the outer walls were all sounded, and it is understood that in those buildings that were not built as fire-proof the walls will be sufficiently strong, with a little under-pinning, to stand, but in the construction of the other houses a great deal of iron was employed so as to make the roofs, as was considered, fit to withstand the action of fire, if, unfortunately, one should occur in any part of the premises. The moment the iron became red hot, it expanded, and forced the walls either down or so weakened them that it is feared they will have to be rebuilt."

It is not desirable that the inference to be drawn from this (namely, that the erection of buildings fire-proof is not simply of no avail but positively injurious) should be adopted unquestioned. It appears that the buildings destroyed were those first erected, when time was an object, and were never regarded as fire-proof: those put up at either end of this nucleus were differently constructed, and remain unhurt. One of the piles burnt down had floors of tile-arches and girders, and an iron roof, but it was filled with deal presses and combustible materials, the whole of which were in flames, and had brought the whole construction to an intense heat before water could be obtained. The result was, that when the water did come it acted very prejudicially on the iron. The importance of party-walls in long ranges of workshops and warehouses cannot be overrated: not walls with openings in them, when provided even with iron doors, for these never happen to be closed when a fire happens, but good *bonâ fide* party-walls, going right through the roof and cutting off all connection between the parts. The convenience of internal communication cannot wisely be put against the risk involved.

ACCIDENT AT THE NEW JAIL, SOUTHAMPTON.—In striking some arches at a great height from the ground, as reported in the local *Advertiser*, three of them gave way on Wednesday week, not being sufficiently set, and fell 20 feet into a story below, which, however, withstood the crash. Two men were injured, one seriously so. The jail will be finished, it seems, in about a year.

CONDITION OF ROCHESTER AND CHATHAM.

HAVING seen the results of your invaluable services to the health of our great metropolis, and not of that only, but also of other cities and towns, where I have known your remarks and suggestions to have had great force, I send you a few lines for insertion, in the hope they may draw attention to an evil. Having occasion to leave town on a professional visit to Rochester, I, as usual,

"Took my walks abroad,"

and was grieved to see the filthy state of the lanes and alleys abutting on the High-street, and which, I may say, are full of human life. Nauseous matter is allowed to accumulate until the rain comes to wash it away. Passing behind the Town-hall, I saw a large open gutter or drain full of filth, and apparently almost stagnant, and sufficient to vitiate the atmosphere far around. All at once a dreadful effluvium, bad enough to germinate the direst of plagues, seemed to fill the air, which I found to proceed from the large open yard of a slaughter-house. I was informed that the refuse matters of this yard were often removed in the middle of the hottest days, which, a few days afterwards, I saw verified, when, if possible, the stench was worse than before. Only last evening, a child who lived in a house adjoining this yard died from an attack of English cholera after a few hours' illness. This morning I learn that another is dangerously ill. Passing down the high street, I reached the "Banks," where I found a long, open ditch or drain, filled with stagnant refuse matter, from which nauseous gases must be constantly ascending to poison and vitiate the surrounding atmosphere. Extending my walk into Chatham, I there found the gutters in the same filthy condition, and around some of the sink gratings, offal of the worst description had been thrown, and was suffered to remain till nearly the middle of a sultry hot day. Turning up one of the streets which led to the New-road, I found the gutters also in a filthy state, and the effluvium was so bad as to compel me to walk with my pocket-handkerchief to my nose

Surely it is time, with cholera at our doors, that such matters were looked into. AN ARCHITECT.

NEW MUSEUMS, TRINITY COLLEGE, DUBLIN.

FEELING that Mr. M'Curdy's letter in your last publication is calculated to mislead the public; in justice to ourselves we think it necessary to reply, and lay before you the following facts:—

In the autumn of 1852, the Board of Trinity College invited Sir Thomas Deane and two other architects (their services being paid for), to make *ground* plans, showing the arrangements of a certain given number of rooms, of a given size, in a given length of building. The ground-plan sent in by Mr. M'Curdy was considered the nearest to what they required, and they finally adopted a modification of it, made by themselves, and then proceeded to make a proposal to Sir Thomas Deane, that he should design, jointly with Mr. M'Curdy, the elevations and the whole of the superstructure. That proposition was respectfully but at once declined on our part, and an intimation made, that if the designing of the superstructure were confided to us, and the superintendence of the execution of our designs were given to Mr. M'Curdy, such an arrangement would be acceptable to us; and on this understanding, as is distinctly expressed in the resolution of the Board, we were "employed to design the building," taking as a basis the modified ground-plan mentioned above. The elevations, sections, and decorations, external and internal (to which Mr. M'Curdy admits he has no claim) include everything in a building that is properly called architecture. It is clear that, on the same ground-plan (*i. e.* arrangement) may be erected the worst possible architecture as well as the best. We know very well that the ground-plan has an influence on the general form of the superstructure, and, therefore, the first thing we did on receiving the instructions of the Board was to obtain their consent to an alteration of the ground plan, from a form somewhat resembling a Greek cross to a simple parallelogram, the general design of the building as now in course of erection having been originally preconceived by us in that form.

The ground plan and plan of the upper story, upon which alone there could be any difference of opinion, were by *authority* directed to have written on them, "*designed* on the basis of Mr. M'Curdy's ground plan, as modified by the Board) *by* Sir Thomas Deane, Son, and Woodward. J. M'Curdy, superintending architect."

In our former communication to you we could not place Mr. M'Curdy's name in a position that would be perfectly acceptable to him; therefore we confined ourselves to a description of the building.

THOS. DEANE, Knt. SON, and WOODWARD.

BIRMINGHAM SCHOOL OF PRACTICAL ART.

The introductory lecture by Mr. W. Williams, the newly-appointed master of the School of Practical Art of the Birmingham and Midland Institute, was delivered on Thursday in last week in the theatre of the association, in Cannon-street. The subject was, "The importance of Scientific Knowledge to the Working Man." While objecting to the once common phrase that "a little knowledge is a dangerous thing," the lecturer remarked that it is ignorance that is now seen to be a dangerous thing. Scientific knowledge is becoming a stern necessity to the working man, especially to those engaged in manufacturing industry. The future prosperity of Birmingham must mainly depend on its being first in the field to turn to account the new powers which the discoveries of the philosopher places in the hands of the intelligent and skilful manufacturer. For example, a new metal has recently been discovered, or more properly speaking it has been rendered accessible in large quantities; he meant the metal aluminium. It is said that it possesses properties which render it highly valuable for various manufacturing purposes. So says the chemist: but the mere chemist is scarcely able to decide that question, neither can the mere mechanic. The one can tell whether it is easy to work or intractable; the other what are its relations to the atmosphere, to acids, what alloys it may form, &c. The mechanic who knows something of chemistry can soon decide the whole question, and, if it is of value, turn it to account, to the benefit of himself, his fellow-townsmen, and the whole community.

In allusion to the sort of education herctofore given to the young in schools, and to the fact that the most useful part of early education (beyond reading, writing, and arithmetic) was obtained not by the aid, but in spite of, the schoolmaster, the lecturer remarked, that this led him at once to the radical basis of the chief defects of the great majority of our educational institutions. They are regarded as places for producing scholars, not for developing useful men and women. But when we speak of a great scholar, we do not mean a man who knows more than other people about soap and candles, or iron, timber, cotton, metals, sugar, air, and water, yet the scholar will at once admit that these are of more importance to us than the siege of Troy or the labours of Hercules. He meant no disrespect to scholarship; but it ought not to be made the leading object of general education.

The lecture concluded with some details as to the mode of instruction to be adopted in the School of Art.

LYNN.

Two events of very different complexion have just occurred at Lynn,—one the inauguration of the Athenæum, and the other the sudden fall of the workhouse.

The Athenæum was inaugurated on the 16th inst. in the hall of the new building, in presence of various public bodies, including the Mayor and Corporation. Lord Stanley also was present, and in course of his address compared the progress of this country with that of others in regard to facilities of access to books. Nearly every great town in this country, he remarked, either has now, or is about to establish, a free library. The number of mechanics' institutions was last year 800, and they are now increasing. As far as they go, they are useful; and in the north of England they are spreading and extending in all directions. Looking at the present, and comparing it with the past here, we have some cause for satisfaction, but when we change the point of view, and compare the present state of things in England, not with the past, but with other countries, I am afraid that the cause of satisfaction will vanish altogether. I was looking the other day over a statistical table, showing the educational means prevailing in various countries. We are in this respect behind other nations in Europe. Taking the number of books available to the public in free or public libraries, I found in Austria, in Prussia, in France, in Belgium, and several German States, and even where one would hardly expect, in Tuscany, the number of books is far greater than it is here. Taking, as an example, large public libraries containing 10,000 volumes, in France there are four millions of volumes deposited, in Austria and Prussia two and a half millions, in England less than two millions; and if we extend the comparison to smaller collections, we shall find the disproportion is even greater.

The new Athenæum building is situated in the centre of the town, on Baxter's Plain. Messrs. Orrso and Maberly, of Lynn, were the architects, and Messrs. J. and W. Purdy, of Lynn, the contractors, who tendered to erect it for 4,150*l.* being the lowest of six tenders. The contract was a losing one, according to the *Norfolk Chronicle*, which states, however, that the work has been well executed. The building presents an ornamental front, and includes the following compartments:—On the basement a corridor 78 feet in length, with rooms on each side, for classes, &c.; conversazione-room, 33 feet by 25; news-room, 33 feet by 18; music-hall, 32 feet by 45, with recess for the organ. This music-hall is well lighted by five windows. The walls are ornamented with pilasters with bold cornice at the spring of the ceiling. The height of the ceiling from the floor is 32 feet. The hall is well ventilated and lighted at night by a gas chandelier. At the east end there is an organ, and orchestra for musicians. The museum-room is 70 feet by 32, with an open roof and glazed lantern, also with large galleries all round. The upper floor includes a subscription library-room 50 feet in length, with two adjoining reading-rooms. There is another large room on the upper floor called the Stanley Library-room and Reading-room, with separate staircase and entrance.

The central tower or main portion of the workhouse, an old building dating from about the fourteenth century, and originally a chapel, suddenly fell into a mass of ruins on Sunday last, while, most fortunately, those who usually inhabited it were elsewhere, the young girls at church and the boys outside, so that very few were injured, but amongst these one old man was killed, and the clockmaker, together with the governor of the house, were buried in the ruins, the latter little injured, but the former, it was found, dead. The building had given repeated warnings of insecurity both by audible and visible cracks and by the stopping of the clock, and some investigation had even been made, but a builder is said to have reported that there was no danger. There were about 160 inmates. An inquest jury have exculpated the authorities from blame.

THE HAMPSTEAD WATER COMPANY.

Observing your observations on the particular necessity at the present time of a daily or constant supply of good water to all parts of London, I take the liberty of informing you that the Hampstead Water Company, which supplies Kentish and Camden-towns, the lower part of Hampstead, the Hampstead-road, and the adjoining neighbourhood, has not improved the mode of supplying these districts. The water is sent into the cisterns three days a week only, viz. on Tuesdays, Thursdays, and Saturdays; no supply from the morning of Saturday till mid-day on Tuesday being given; the consequence of this and the limited quantity sent in is, that the tenants of respectable houses are without water before Tuesday, and if the respectable houses feel the evil, how much more so must the poorer classes be inconvenienced?

All the metropolitan water companies were pledged to the committee of the House of Commons, appointed to investigate the water supply to the metropolis in 1852, to give a daily supply, except on Sunday; this has been complied with by all but the Hampstead Company; the New River Company now give it on the Sunday likewise.

The Hampstead company have no excuse to offer except that of £. s. d. for the greater part of the water which is supplied to the tenants is obtained from the New River Company, which company will willingly furnish any quantity required.

A Ratepayer to the Hampstead Water Company.

OLD-STREET EXTENSION AND NEW OXFORD-STREET JUNCTION.

The great desirability of a better communication west and north-east has long been felt, recognised, and paid for by the public: how to get from the western district to the Eastern Counties Railway, Hackney, Dalston, Homerton, and other large neighbourhoods, without traversing the crowded city and adding one-third to the distance and time occupied in transit, is a problem difficult to solve and a matter worthy of some consideration.

Whilst lines of streets, greatly inferior in pretension and in usefulness, have been carried at great expense and difficulty, it is not a little singular that this line, so much needed, and, in fact, imperatively demanded, has been suffered to remain in abeyance, for the facilities of its execution are probably greater than could be found in any other line.

Old-street abruptly ends and is terminated by a screen-wall of the Charter-house grounds: thence to St. John-street, is unoccupied ground, available for building purposes: crossing St. John-street, a very poor neighbourhood, and St. John's-square is reached, forming the requisite opening: passing a very small distance thence and Farringdon-street is reached: this would have to be crossed by a viaduct, so as to preserve the high level throughout; thence to Reid's brewery, King's-road, Theobald's-road, and Bloomsbury-square. These last, with comparatively small alterations, would, in point of fact, constitute the new line a direct one, and in this respect superior to many new lines of street which cannot claim directness, but are a poor sort of compromise between the old and new—a course of proceeding greatly to be deprecated, and perpetuating an evil which becomes every day more apparent.

R. L. S.

METROPOLITAN SEWERS COMMISSION.

CHOLERA—PRECAUTIONARY MEASURES.

At a general meeting of commissioners, held on 17th inst. the secretary reported that the amount in the hands of the treasurer, on 17th inst. was 31,532*l.* 15*s.* 6*d.* and after payment of certain charges, the available balance would be 31,117*l.* 13*s.* 4*d.* The amount of the deposit account was 100,000*l.*

The Chairman, after a short consultation with his colleagues, then entered into a long statement, for the purpose, chiefly, of showing that, under present circumstances, it would be difficult for the commission to take any special or local measures palliative of cholera other than those in course of progress, as a staff of 100 persons would be required, and there were difficulties in the way as to the enforcement of powers given to the commission, and various other public bodies, by the Removal of Nuisances Act; whereas, on the other hand, such local authorities as vestries and poor-law guardians, who also had power under that Act, and more particularly by order of the Privy Council, while pestilence is raging, were so situated as to have practically much more in their power, and such bodies ought to exert their power and influence in the removal of nuisances, which they could in many instances do at the public charge, where owners or occupiers were too poor to do so themselves, while the commission were compelled to proceed against all such persons, without regard to their disability to pay. There were forty boards of guardians within the metropolitan districts, who might with peculiar advantage undertake the removal of nuisances, for the cost of which they could in many cases charge the poor-rates.

In course of his remarks, the chairman stated that, after the commission had obtained power last session, to borrow 200,000*l.* some difficulty arose, and a good deal of negociation took place with the government. The result was that the commissioners did not find themselves in a position to expend this money in accordance with their own wish, on what might properly be termed the main drainage works — the Hackney-brook sewer and the southern drainage; and that when they were enabled to come to a decision as to how they should appropriate the money, they determined to reconstruct the Counter's Creek sewer, and also entered into a contract for 28,000*l.* for the drainage of the Ravensbourne and Greenwich districts. They further entered into contracts for the reconstruction of a portion of the great Ranelagh sewer, and executed several large works in the Hammersmith and Fulham districts. These were some of the larger lines to which this 200,000*l.* was appropriated, but they had ordered works to a great extent also at Lambeth, Rotherhithe, St. Mary's, Newington, and elsewhere. They had also obtained from Parliament power to raise 300,000*l.* more, and it would be for the consideration of the new commission, which is expected shortly to issue, how that money should be appropriated. They had given a decided opinion that it should be appropriated to a portion of the Hackney-brook sewer, which would relieve Stoke Newington; and next, to a portion of the great southern drainage, which would relieve Camberwell, Rotherthithe, Bermondsey, and Lambeth. A much larger sum would be required to complete these works. The public must not suppose that they would arrest the cholera at present; but if London should be visited with the same disease next year, their effect would be beneficially felt.

Lieut. Colonel Dawson suggested the issue of a circular to the boards of guardians; and, after a few words, the motion was agreed to.

New Flux for Metals and Glass. — Mr. B. L. Phillips, of 15, Cobourg-place, Upper Kennington, London, has introduced a new flux in the manufacture of iron and other metals, as well as of glass. The agent is applied in a liquid form to melted metals, in the furnace or cupola, and has the effect, it is said, of increasing their strength by the expulsion of impurities, and consequently rendering them more close and solid in texture than is attainable by the ordinary methods employed. Several engineering firms are said to have declared that the use of this flux greatly augments the strength of iron. The tests employed were those of deflexion and fracture by active means, in both of which the extra resistance was said to be much greater than on the same iron cast without the use of the new flux. A great improvement in glass, in its crystalline and cohesive properties, is also said to result from the use of the same material.

Miscellanea.

The Timber Trade of America.—The spirit of traffic seems to have seized upon the whole world, and notwithstanding the great number and size of ships, the fastness of their sailing, and the shortening of the distances, we are far from being supplied with vessels, and much further than when the trade to the Pacific first opened. We formerly had shipyards at the mouths of the river, that the materials might be floated down the streams; but the ship-timber forests have long since disappeared. Then the railways made the woods of the interior accessible; and by them now are most of our shipyards supplied. Trees that are worthless in the interior of New Hampshire and Vermont have gone up in value; and even to the wilderness of Canada the landholder, in estimating his lands, will mark all the trees, and perfectly well knows their worth for spars or ship-building. The hunting up of knees and keel pieces away back upon the hills a hundred miles is what the last generation of carpenters never thought of. Lately, more than heretofore, the carpenters have looked south for materials, to the immense pine and oak fields from Virginia to Florida. Some of our carpenters have recently been south, and, we understand, made extensive purchases of lands.—*Newbury Port Herald.*

Telegraphic Progress.—Nimble female fingers, we are pleased to hear, were busily engaged, at the closing of Parliament, in transmitting her Majesty's speech by electric telegraph to the provinces and the continent from the old company's central station. The lady-clerks, it appears, are no less excellent as telegraphers in Mercury's service than in Cupid's. The girls are superintended by a matron telegrapher. Some of them, it is said, transmitted the speech at the rate of thirty-five words a minute, and sent the whole to the continent (*vid* the Hague) in twenty minutes. The Electric Telegraph Company merit the best thanks of the public for thus setting the example of affording a wider scope than heretofore to female employment. If the "spirited young men" who stand behind our national shop-counters would but occupy a like position, instead, behind our Eastern entrenchments, the "girls they left behind them" would be very willing, we dare say, to "mind the shop" in their absence, and so enjoy another opportunity of earning an honest and fitting livelihood for themselves,—of a somewhat less irksome and laborious kind than shirt-stitching, even though aided as it now is by machinery. The art of telegraphing has the additional advantage of exercising the mental faculties as well as the fingers, but unfortunately the number of females to whom this branch of business will open up a new field of employment cannot be very great, even at the utmost. The great point is to destroy the opinion that a lady who earns her own subsistence by an honourable occupation loses position.

St Martin's, Birmingham.—Remains Discovered.—Behind the brick casing of the tower, two arched recesses were discovered in the north wall close to the basement, and which Mr. Hardwick anticipated would be found to contain the remains of the founder or of special benefactors of the church. Search was accordingly made, and four skeletons were found in tombs cut in the foundation of the tower, each about 2 feet deep and 16 inches wide. The recesses, according to the local *Journal*, are to be restored with the utmost decoration which the period will allow. Messrs. Branson and Gwyther are pushing on the work with vigour. The masonry is about visible above the boarding which encloses the churchyard, and it is anticipated that by the beginning of November, the tower will be completed. The spire still depends on the state of the restoration fund. The interior of the church has undergone a much-needed renovation and cleansing. By alteration of pews, about a hundred sittings have been added to the accommodation, all to be free.

Narrow Escape of Mr. Peto.—The *Norfolk News* states that at the recent ceremony of laying the foundation-stone of a new Baptist chapel, Mr. Peto, M.P. had a narrow escape. He had just deposited a bottle containing historical reminiscences of the church in the appointed recess, and the workmen were lowering the stone (a huge mass of granite) when the rope from which the pulley block was suspended gave way, and the mass fell with a heavy crash, splashing up the mortar in every direction. Much consternation was occasioned, but the pastor soon allayed the excitement by announcing that no injury had been sustained by any one.

Wide again.—Please insert the enclosed tenders delivered for proposed National Schools and residence in carcase only, Sandown, Isle of Wight. Mr. Woodman, architect, Brighton:—

Jolliffe	£1,207	0	0
Attrill	1,060	0	0
Damp	947	12	0
Cooper	864	14	6
Pelley	692	16	6

Tynemouth.—We leave to our readers the task of judging how much of the following announcement, by the *Gateshead Observer*, may be fact, and how much "banter," as they call it in the North. Perhaps, like Solomon in his celebrated judgment, they may feel inclined to "split the difference":—"*The Royal Commission on the Tyne.*—We have been favoured with an early copy—a *very* early copy—of the report of the coming Commissioners of Inquiry into the Conservancy of the Tyne. The commissioners, appointed at the instigation of Shields, report, *à la Solomon*, in favour of cutting the river in two! They are not agreed, however, as to the line of bisection. One of them would build a wall right across, somewhere about Howdon; and the Shields people seem to be of this commissioner's opinion. Another, however, thinks it would be fairer to build the wall in midstream, from the bar to Blaydon, thus giving each party a parallel half of the navigation; while the third, copying the cross tailor who, to spite his wife, deposited himself in bed diagonally, inclines to this mode of dividing the river; but South Shields and Tynemouth cannot agree (and no wonder!) upon the side of the harbour from which the wall should commence!"

Chandeliers for St. George's Hall, Liverpool.—Ten chandeliers in brass are being manufactured by Messrs. Messenger and Son, of Birmingham, for the principal room of St. George's Hall. Each chandelier weighs about a ton, and, in the design for them, some regard, it is said, has been had to the Grecian style of the interior decorations of the building, though intervolved with emblematic representations, such as that of the Liver.

What is a House?—Will you have the kindness to let me know the definition of a house? I presume a house is not a house if it has no doors, windows, or chimneys; but what I especially want to know is, whether a house is a house which has neither closet, *latrine*, or other convenience of a like kind. I am induced to ask you this question, as I presume the Metropolitan Buildings Act has some clause which makes it imperative that such accommodation should be supplied, and as an instance of such neglect I refer you to Blakeney's-buildings, Parsley's-court, &c. &c. opposite the Peacock at Islington.—W. H. B.

Norwich School of Design.—This school will be reopened at Michaelmas, and it is to be hoped that it will be conducted on a more satisfactory and peaceable system than heretofore. Mr. Claude L. Nursey, of the Belfast School of Art, has been appointed master in the room of Mr. Heaviside, whose differences with the local committee led to his retirement.

New Boring-machine.—At the Birmingham Institution of Mechanical Engineers, Mr. Samuel H. Blackwell, of Dudley, lately described "Kind's improved apparatus for boring." It is said to be in successful use in the coal mines of Belgium and salt works in France. The bore hole is made larger than usual—about 10 or 12 inches diameter; but a centre core is left solid, of about two-thirds the diameter of the bore hole; and this solid portion is brought up by the boring tool, in cylindrical pieces about a foot in length. These show the formation of the strata bored through, and afford the means of measuring the angle of dip of the strata, and also the direction of the dip, thus preventing useless outlay in sinking pits. A considerable economy is said to be effected in the cost and time of boring, by an improvement in construction, by which the rods are prevented from falling with the heavy chisel, so that a light wood rod can be employed instead of the heavy iron rods.

Railway Matters.—The Halesworth, Beccles, and Haddiscoe Railway, which forms a junction with the Norfolk line at Haddiscoe, is so far completed, that it is expected to be opened for traffic in the course of September. Stations have been erected at Beccles and Halesworth.——The branch railway to Bishop Auckland from Durham is progressing. A stone bridge, erected across the old Newcastle road at the head of Framwell-gate, has recently been completed. A larger one, of ten arches, crosses the new north road a little to the south-east of the county hospital. The bases of the columns rest upon wooden piles, 40 feet in length.——The works on the Darlington and Barnard Castle Railway have commenced.——The half-yearly report of the London and North-Western Company states the working plant of the line to consist of 679 locomotive engines, 677 tenders, 1 state-carriage, 600 first-class mails and composite carriages, 571 second-class, and 409 third-class carriages, 26 travelling post-offices and tenders, 286 horse-boxes, 253 carriage-trucks, 238 guards, parcels, and break-vans, 29 trucks, 10,903 goods waggons, 232 sheep-vans, 26 trolleys, &c. 5,150 sheets, and 162 horses.——Mr. John Hinde, of Schenectady, N. Y. proposes to protect the surface grading and the embankments of railroads, by simply covering the surface with a coating of coal tar, combined or not with sand, gravel, &c.

Grand Trunk of Canada Railway.—The first meeting of shareholders in this company was held on 27th July, at Quebec, the Hon. J. Ross, president, in the chair, when Sir C. Roney, the managing director, read the report, which was adopted, and from which it appears that the amalgamation of companies was completed in July, 1853, and the organisation of the company in the traffic department effected, under the control of Mr. S. P. Bidder, its general manager, The principle of the London Clearing-house had been adopted. Arrangements have been made for proceeding with the works so that the line shall be opened from Montreal to Prescott and between Toronto and Stratford (210 miles) next autumn, and the other sections (total length, 867 miles) in October, 1856. The works postponed comprehend 245 miles, and an outlay of 2,000,000*l*. The capital account showed to 30th June that 1,860,265*l* had been expended—237,793*l*. for works, stock, &c. between Montreal and Portland; 589,425*l*. for ditto between Montreal and Toronto; 363,397*l*. between Toronto and St. Mary's; 537,350*l*. between Quebec and Richmond; 63,172*l*. east of Quebec; and 57,020*l*. for Victoria-bridge. In June last, 13,821 men and 1,856 horses were employed on the works.

Bedfordshire Archæological and Architectural Society.—A council meeting of this society was held on Tuesday in last week, Dr. Paris Dick in the chair, when some new members were elected and presentations of books and antiquities announced. The old Manor House at Wood End, Cople, formerly the seat of the Luke family, in a secret apartment of which it is supposed that Butler wrote his "Hudibras," being shortly to be demolished, it was resolved that a party be formed to visit it, and one or two of the neighbouring churches, on the 21st instant.

New London Churches.—Several new churches are about being commenced in the metropolitan districts. In Paddington three new churches are to be at once commenced, the Bishop of London having subscribed 1,000*l*. towards that object. In Coventry-street, Haymarket, between Rupert-street and Princes-street, a church is to be erected, her Majesty the Queen having subscribed 500*l*.; the Bishop of London, 1,000*l*.; Viscount Sydney, 25*l*.; and Mr. W. T. Egerton, M.P. 25*l*. for that purpose. Three churches are to be erected in Clerkenwell, an influential committee, of which Lord Shaftesbury is at the head, having been formed for the purpose of raising the necessary funds. In the parish of St. Andrew, Holborn, a large church is to be erected at the sole expense of Mr. J. Gellibrand Hubbard, a site having been given by Lord Leigh. At Limehouse a church is to be built at the sole expense of Mr. William Cotton. "A Merchant," whose name has not transpired, has volunteered to build and endow a church in any part of London the bishop of the diocese may point out. In Kensington, Isleworth, Hammersmith, St. Pancras, Shoreditch, Whitechapel, and other densely-populated districts, churches are to be built.

Health from the Pulpits.—I have read with much pleasure your sanitary articles, in which you took the lead some years since. Had your various suggestions been energetically taken in hand by local authorities, a number of those now in dust would have been yet living members of society. Pulpits resounded with the judgments of God as a punishment, instead of which, had they preached a sermon once a month, taking the arguments of the *Builder* for their texts, and excited their congregations to set their own houses in order, and incited them to aid and assist in adopting plans in their parishes to promote your constant appeals, they would have done more service than by a cart-load of such sermons as have been delivered. I hope still you will go on: truth requires constant repetition when opposing ignorance, uncleanness, and local interests.—B. H.

Masters and Workmen.—At the police-court, Willenhall, last week, a workman was charged with neglecting the work of his employer, a lockmaker. The complainant put in a written agreement, and stated that he gave the prisoner some shackles to forge: he took the materials, but refused to proceed with the work. The accused attempted to show that he had only contracted to do "best work," but there was a clause in the agreement specifying that he should perform any work connected with the "branches" of the trade, and the bench decided that he should return to his employment, and pay the expenses.

Antiquarian Discoveries at Exeter.—In taking down the old school-house or church, the workmen have brought to light various ancient relics, one of them being a stone coffin which lay underneath the west buttress of the building, and 2 or 3 feet beneath the surface. Near the south-east corner, and quite embedded in the wall, a small stone crucifix was found. It comprises the figure of our Saviour on the Cross, and two female figures, one on either side, in relief. The ground-work is stained scarlet. Mr. John Rawlings, of Hendford, builder, has the crucifix.

Surveyors and Nuisance Inspectors: Faversham.—The principle of live and let live does not appear to apply to the profession of the surveyor: there seems to be a determination, on the contrary, to sink that profession altogether into the cesspool of nuisance inspection and the fitting livelihood for that useful sanitary office. In short, there is an insanitary, or, at any rate, an insane propensity amongst local authorities, such as boards and commissioners, to run a-muck against the poor surveyors, and to hand over their livings, at least, if not their lives, to the nuisance inspector, and actually now to the sewer-rate collector! The Faversham Commissioners of Pavements having advertised for a surveyor and nuisance inspector, superintendent of paving, draining, and watering, clerk of works, and foreman, accountant, and pay-clerk—we are attempting to describe the duties of an individual not of a staff—and offering a salary of 100*l.* a year,—shortly after repented of their undue extravagance, and sent a printed circular to the candidates, intimating their "regret"—why then did they do it?—that they had revoked—repudiated it should have been—the offer of 100*l.* for the staff-officer required, and that upon second thoughts they would only give 70*l.* and also require the stick who should accept of it, over and above his other multifarious duties, to collect the rates! The Faversham Commissioners *may* procure some stray and starving nuisance inspector out of place to accept their liberal offer and remunerate himself by walking off with the rates and wages, but they ought not to be likely to obtain a surveyor.

Insurance of Workmen's Tools.—No workshops are destroyed by fire, without the poor workmen losing all their tools, and very frequently the public are solicited for pecuniary aid in replacing the loss. I would beg to suggest to the large building firms the policy of insuring their workmen's tools against loss by fire. I know one joiner's shop which contains more than 100 benches, and nearly 100 chests of tools. Value them all round at 50*l.* each, making a total of 5,000*l.* This sum might be insured for an annual payment of about 8*l.* or about 1s. 8d. for each chest; and I am sure the majority of workmen would hail such an arrangement with their employers as a great boon; and the evil effects inseparably connected with eleemosynary aid would be avoided.—E. M.

A Question for Solution.—For the amusement of your scientific readers, I beg leave to propose the following question: Suppose the pitch of a roof to be at an angle of 45 degrees, and the position of the depth of the purlin at right angles to the plane of the pitch, the purlin to be 6 inches deep;—required, the length of a line that would coincide a right-angled intersection with the hip rafter or valley piece, otherwise called the down level.—F. P.

Value of Land in South Devon.—A fortnight ago, an estate of 132a. 1r. 21p. of arable, meadow, orchard, and pasture land, in the parish of Stoke Fleming, was sold by auction for 6,100*l.* about thirty-eight years' purchase upon present rental.

Metals.—Mr. W. Newton (for a correspondent), has patented the coating cast-iron permanently with copper, by depositing the copper by galvanic action, from a solution prepared by first taking a saturated solution of sulphate of copper in water and precipitating with carbonate of potash, and then re-dissolving in cyanide of potassium, whether the copper be deposited directly on the surface of the cast-iron or on zinc previously deposited thereon. The second part of this invention consists of coating cast-iron with brass, by first coating with copper, or zinc, or both, and then depositing the brass thereon, by galvanic action, from a solution formed by mixing with the solution of copper employed in the first part of the invention, a solution of zinc prepared in substantially the same manner. The iron articles thus coated, may be subsequently coated with gold or silver.——Mr. Harris, of Pottsville, Pa. (U.S.), has patented some improvements in rolling railroad iron, which are thus described:—"Instead of the one set of rolls containing the nine grooves, by the new process there are nine separate pairs of rolls, each having but one groove—arranged in one continuous line, with close ducts or boxes between; so that the 'pile' (the hot ball of metal), is fed in at one end, and comes out at the other a railroad bar!"——From the specifications of the processes patented by Mr. M. Stirling, and Mr. Talbot for the improvement of iron manufacture, it appears that into the moulds, or chills, into which molten iron is run, a mixture of any of the purer oxides of iron, combined with combustible matter, is introduced. Chemical action ensues, and the nature of the pig-iron is changed, so that, when afterwards subjected to the process of puddling, it is made ready converted into malleable iron; the quality of which is improved, and may be changed, by the addition of other oxides, salts, &c. The combustible matters employed by the patentees vary according to locality, including ligneous matter, turf, resinous, oily, and fatty matters.

School at Claycross.—Fifteen years since the only dwellings at Claycross were cattle-sheds in the midst of pasturage. Now there is a town containing between five and six hundred houses, a church, three chapels, and a population of more than 3,000. Of these about 1,000 are coal-miners, the rapid progress of the place being solely attributable to its rich coal strata. These miners earn from 24s. to 36s. a week, with constant employment, and there is still a continual demand for labour. Under such flourishing circumstances as these, and by way of celebrating the circumstances as these, and by way of celebrating the circumstances as these, and by way of celebrating the

ADVERTISEMENTS.

I, THE UNDERSIGNED THOMAS WILMSHURST, of No. 13, FOLEY-PLACE, in the parish of St. Marylebone, in the county of Middlesex do hereby give notice, that the PARTNERSHIP hitherto subsisting between me, the said THOMAS WILMSHURST, and THOMAS WALKER OLIPHANT, of No 25, GOLDEN-SQUARE, in the same county, as Artists and Stained Glass Painters at No 13, Foley-place aforesaid, has been this day DISSOLVED by me, pursuant to the provisions of the articles of copartnership subsisting between us, by reason of the said THOMAS WALKER OLIPHANT having, contrary to the same articles, accepted in the name of the partnership firm a bill of exchange, without my consent or knowledge, not on account of any partnership business or transaction, but for his own private debt. And I do hereby further give notice, that I will not be responsible to any person or persons with whom the said THOMAS WALKER OLIPHANT may incur any liability in the name of the firm, or on account of the said partnership. And I desire that all debts owing to the said copartnership may be paid to me alone.—Dated this twenty-second day of August, 1854. THOS WILMSHURST.

TO CLERKS OF WORKS, BUILDERS' FOREMEN, &c.

X.Y.Z. who advertised in the "Builder" of last week for a Foreman and Collector, having received several hundred replies, begs to inform such applicants that he will not attend to any communications unless they are sufficiently explicit as to their former situations and employers to enable him to decide whether suitable to his requirements or not.

TO PARENTS AND GUARDIANS.

A FIRST-RATE GRAINER and WRITER has a VACANCY for a respectable Youth as an Apprentice. Moderate premium required.—Address, W. S. 14, Lower Queen's-row, Pentonville

TO PLUMBERS, PAINTERS, AND GLAZIERS.

A WORKING FOREMAN WANTED for a business in the country, capable of keeping the books, and a good plumber.—Apply to Mr. TOWNSEND, 74, Queen's-road West, Chelsea.

GAS ACCOUNTANTS.—Wanted, immediately, by a Metropolitan Gas Company, a good ACCOUNTANT. A gentleman who has filled a similar position, if really efficient, would be preferred. It is particularly requested (with the view of saving trouble) that no second-rate person will apply.—Applications, by letter only, stating all particulars of former engagements, salary expected, and quoting testimonials, to be addressed "Gas Accountant," care of W. Thomas and Co. General Advertising Agents, 19 to 21, Catherine-street, Strand.

WANTED, an IN-DOOR APPRENTICE, by a Builder, in an old-established business, about four miles south of London.—Apply to E. M. N. 110, Leadenhall street, City.

WANTED, in an Engineer's Establishment in town, a YARD and DELIVERY CLERK. He must write a good hand, and have filled a similar situation before.—Address, stating salary expected, and last situation, to O. P. Office of "The Builder."

TO BUILDERS AND OTHERS.

WANTED, by a General Mercantile and Builders' ACCOUNTANT, an ENGAGEMENT, permanent or temporary; town or country; of experience in getting out prime cost and pricing the building trades' charges.—Address, A. B. Messrs. Gardner and Son's, Ironmongers and Smiths, Wandsworth road, Surrey.

WANTED, a well-qualified ARCHITECT and BUILDER'S ASSISTANT in the country, capable of designing and taking out quantities.—Apply by letter, stating age, terms, and other particulars, addressed LINDUM, Office of "The Builder."

WANTED, by an experienced Grainer, Plain and Ornamental Painter, a SITUATION. Would make himself generally useful. The best reference for particulars. Apply by letter, to A. C. care of H. Mann, Herald Painter and Writer, 4, Caveudish-street, New North-road, Hoxton. No objection to the country.

TO BRICKLAYERS, BUILDERS, &c.

WANTED, by a Young Man aged 21, EMPLOYMENT as a BRICKLAYER, as improver or to article himself for two or three years. Wages not so much an object. Small premium if required. Direct, A. B. Mr. Bailey's, 7, Upper John-street, Tottenham Court road.

WANTED, by a respectable well-educated YOUTH, aged 16, a SITUATION in an Engineer's, Architect's, or Builder's Office. He has a taste for drawing. Most respectable reference can be given.—Address to A. B. 5, Beaumont-street, Mile-end.

WANTED, by a Young Man, a SITUATION as MECHANICAL DRAUGHTSMAN. Has been accustomed to locomotive and stationary work, and is a good practical mechanic. Would have no objection to make himself generally useful. Moderate salary required. Reference from his last place. Address, B. C. Office of "The Builder."

TO PLUMBERS, PAINTERS, GLAZIERS, AND BUILDERS.

WANTED, by the Advertiser, a SITUATION. He is thoroughly acquainted with the three branches, and is conversant with measurements and superintending work. No objection to the country.—Address, post-paid, to J. H. M. care of Mr. Chalmer, Queen's Arms, Harnet.

TO NOBLEMEN, ARCHITECTS, BUILDERS, AND OTHERS.

WANTED, by a Young Man (aged 26), a Carpenter and Joiner, a SITUATION as Foreman, or to collect rents and superintend the general repairs of houses, an estate, or a business for a widow. Understands the building trade generally, drawing, book-keeping, &c. and would make himself generally useful. Most unexceptionable reference as to character, &c. can be given. No objection to town or country.—Address, A. B. care of Mr. Messent, 5, Trafalgar-street, Walworth.

TO BUILDERS AND CARPENTERS.

WANTED, in-doors, for a well-grown Youth, 16 years of age, a MASTER, in this line, for five years, either in London or at a moderate distance from it, the latter preferred. State terms.—Address, Mr. SPENCER, 211, Blackfriars-road, London.

TO PROPRIETORS OF SAW-MILLS OR BUILDERS.

WANTED, a SITUATION as SAW SHARPENER, or FRAME WORKER, or BENCHMAN. Seven years' character. Town or country.—Direct, C. Z. 3, Exeter-street, Lisson-grove, Marylebone.

WANTED, by a respectable, middle-aged Man, a SITUATION as GATEKEEPER, TIMEKEEPER, &c. or any place where he could make himself useful to his employer. Writes a fair plain hand, has a knowledge of accounts, and can give security.—Address, prepaid, G. F. N. at C. Cole's, Baker, 17, Vauxhall-bridge-road, Pimlico.

TO CARPENTERS AND BUILDERS.

WANTED, by a steady, sober, and industrious Young Man, aged 25, EMPLOYMENT in the above trade as an IMPROVER, at Low wages. No objection to the country.—Address, E. O. 27, Commercial-road, Pimlico.

WANTED, by the Advertiser, a SITUATION as BRICKLAYER'S FOREMAN or MANAGER of WORKS. Has just finished some extensive works, from which he can be highly recommended. Town or country.—Address A. B. 44, Guildford place, Kennington-lane.

TO BUILDERS.

WANTED, by a respectable Young Man, a SITUATION, in town or country, as CARPENTER, or to collect rents, and do general repairs. Wages not so much an object as a constant situation.—Addre s, W. W. E. 2, Sard's place, Church-street, Horsel ydown

TO BUILDERS, CARPENTERS, &c.

WANTED, by the Advertiser, a Situation as SHOP or GENERAL FOREMAN, or to take charge of a country job.—Apply, by letter, addressed J. W. H. 25, Northampton-square, Goswell-road.

TO BRICKMAKERS.

WANTED, by a respectable Young Man, a RE-ENGAGEMENT, as FOREMAN in the above line. The Advertiser is thoroughly conversant with the details of the business, having had large and practical experience as a workman and manager for several years. Unexceptional references to ability and general conduct may be obtained of his late employer.—Address to W. H. H. No 19, Berwick-street, Pimlico

TO ARCHITECTS.

THE Advertiser, aged 20, having completed his apprenticeship with an architect in the country, is desirous of obtaining a SITUATION in a good Office, where he will have an opportunity of further improvement.—Any additional information in answer to inquiry addressed to F. W. Mr. Day's, Stationer, Melton Mowbray.

TO BUILDERS, PAINTERS, &c.

THE Advertiser, an experienced man, aged 34, wishes for a constant SITUATION as WRITER, GRAINER, &c or WORKING FOREMAN. Has a thorough knowledge of house painting in all its branches, and capable to manage a business. No objection to painting to fill up his time.—Address, H. D. 21, Caledonia-street, King's-cross, London.

TIMEKEEPER, CLERK, &c.—WANTED, a SITUATION as TIMEKEEPER, CLERK, &c. or in any capacity where stability of character is required, by a Young Man, at present in the employ of a timber merchant. He is a good penman and bookkeeper, and can give satisfactory references.—Address, pre-paid, J. H. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

THE Advertiser, having been for many years in the constant habit of putting up staircases and handrails of every description for the trade, takes the liberty of soliciting your favours in this department, and you may rely on my executing the work in the best manner and on the lowest terms. Patent veneered handrails without joints. Estimates given.—W. STARR, and SON, No. 88, Dean-street, Soho, London.

TO CIVIL ENGINEERS AND OTHERS.

THE Advertiser, aged 22, who is a fair Architectural Draughtsman, and has a knowledge of surveying, levelling, plotting, mapping, and civil engineering drawing, is desirous of EMPLOYMENT. Salary very moderate. Address, A. G. Mr. Hookha n's Library, Old Bond street.

TO BUILDERS, &c.

THE Advertiser wants some HOUSES in CARCASE to FINISH by CONTRACT; would undertake the whole on reasonable terms.—Apply by letter, to C. C. at 13, Canterbury-terrace, Beresford street, Walworth, London. Country not objected to, if the job be considerable.

THE Advertiser, aged 20, having recently completed an engagement with an architect in the country, is desirous of obtaining a SITUATION where he will have an opportunity for further improvement. Further particulars in answer to inquiry, addressed T. W. Mr. Towne's, Stationer, Melton Mowbray.

TO CARPENTERS AND BUILDERS.

THE Advertiser wishes to APPRENTICE a YOUTH, aged 15, to the above business, where he will have an opportunity of thoroughly learning his trade, either out or in doors, but the latter preferred.—Address, with particulars and premium required, to R. S. 34, Newington-causeway.

TO BUILDERS, ARCHITECTS, AND SURVEYORS.

THE Advertiser is not particular which situation he undertakes. He is a fair draughtsman, has a knowledge of taking out quantities, and willing to make himself generally useful either in town or country.—Address, B. B. to the care of Mr. Duchesne, Chemist, Hemingford-place, Islington.

TO ENGINEERS, CONTRACTORS, &c.

THE Advertiser, about leaving a large engineering and railway contracting firm, in whose employ he has been for the past two and a half years as Clerk and General Assistant to the superintending Engineer, is desirous of a RE-ENGAGEMENT.—A. B. Kay's Library, Bridge-place, Harrow-road, Paddington.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

SUCH Parties as may require the ASSISTANCE for a few weeks of a person of considerable practical experience in preparing quantities, plans, or specifications, or in measuring up works, can obtain that assistance by addressing to W. 194, North Audley-street, Grosvenor-square.—Country employment preferred.

TO BUILDERS.

A PRACTICAL SURVEYOR, Measurer, Estimator, &c. would be glad to undertake any Business for Builders, upon strictly moderate terms.—Address, Mr. WILLIAMS, 17, Penlington-place, Hercules buildings, Lambeth.

A PRACTICAL CARPENTER and JOINER, well versed in construction and detail drawings, is a good plain draughtsman, can measure, &c. wishes for a SITUATION as GENERAL or SHOP FOREMAN. Address, A. B. 13, a, East-road, Hoxton. No objection to a country town. N.B. Good testimonials.

TO ARCHITECTS.

AN experienced SURVEYOR in taking off quantities, measuring, and valuing work, &c would be glad to enter into an arrangement with architects for the same.—Address, H. G. Office of "The Builder."

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

AS CLERK of WORKS, a thoroughly qualified person. Address to Y. Z. 23, Northumberland-place, Westbourne grove.

TO ARCHITECTS, CIVIL ENGINEERS, &c.

AS DRAUGHTSMAN, the Advertiser is desirous of a SITUATION.—Address to E. F. 6, Artesian-place, Richmond-road.

A SURVEYOR who has not the whole of his time occupied, would be willing to enter into an ENGAGEMENT to COLLECT the RENTS of any gentleman's estate, make all necessary surveys of dilapidations, and prepare the specifications and estimates for same, either at a fixed salary or a commission. The advertiser can produce the most unexceptionable testimonials, and give security to any amount.—Address, F. W. 9 Bloomfield-street North, Kingsland.

TO ARCHITECTS.

A GENTLEMAN of great experience in Church and Villa Architecture, is desirous of permanently taking the MANAGEMENT of an OFFICE in Town or Country. A good salary required.—Address, M. N. Office of "The Builder."

TO ARCHITECTS.

AN ASSISTANT of nine years' experience is open to an ENGAGEMENT, in town or country. Satisfactory testimonials.—Apply, G. C. 5, South-parade, Leeds.

A BUILDER and CONTRACTOR'S CLERK wishes for a RE-ENGAGEMENT in a London Office. Most respectable references and testimonials can be given from his late employer.—Address, A. B. 44, Frederick-place, Rotherfield-street, Islington.

A YOUNG MAN who has just completed his apprenticeship in a Joiner's Shop, wishes for a SITUATION in a Builder's Office. He has had a good education, and has some knowledge of drawing.—Address, R. Pantechnicon, Belgrave square.

AN ASSISTANT ENGINEER or SURVEYOR is open to an ENGAGEMENT. Unexceptionable reference given.—Address, H. W. Box 18, Post-office, Birkenhead.

TO BUILDERS.

AN experienced SHOP FOREMAN is desirous of a RE-ENGAGEMENT. No objection to the country.—Address, C. W. No. 4, Great New-street, Shoe-lane London.

TO ARCHITECTS, SURVEYORS, &c.

PARTNERSHIP WANTED, with an established Architect and Surveyor, or with one wishing to partially withdraw from business.—Address, A. B. Mr. Jeffery's, Stationer, George-yard, Lombard-street.

CRYSTAL PALACE GENERAL ARRANGEMENTS.—The Palace is opened on Mondays at 9 a.m and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m On these days the charge for admission is One Shilling. It is opened on Saturdays at noon, on which day the charge for admission is Five Shillings.

SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-day as follows, at 7 10, 8 10, 9 10, 9 40, 10 10, 10 40, 11 10, 11 40 a.m. and 12 10, 12 40, 1 10, 1 40, 2 10, 2 40, 3 10, 3 40, 4 10, 4 40, 5 10, 5 25, 5 40 p.m.; returning from the Crystal Palace at 11 20, 11 50 a.m and 12 20, 12 50, 1 20, 1 50, 2 20, 2 50, 3 20, 3 50, 4 20, 4 50, 5 20, 5 50, 6 20, 6 50, 7 20, 7 50, 8 20, 8 50 p.m; and further additional trains will run whenever the traffic renders it necessary.

The 7 10, 8 10 and 9 10 a.m. Down Trains, and the 4 50, 5 50, 6 50, and 8 50 p.m. Up Trains call at New Cross and Forest-hill. The Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London-bridge, at least every ten minutes during the day, and at those hours when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	First Class,	2s. 6d.
"	Second Class,	2s. 0d.
"	Third Class,	1s. 6d.
Saturdays	First Class,	7s. 0d.
"	Second Class,	5s. 6d.
"	Third Class,	4s. 0d.

In order to afford every facility to the public, and to prevent any delay at London-bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.

Fares between London-bridge and the Crystal Palace Station, not including admission to the Palace:—

Single Tickets	First Class,	1s. 3d.
"	Second Class,	1s. 0d.
"	Third Class,	0s. 9d.
Return Tickets	First Class,	2s. 0d.
"	Second Class,	1s. 6d.
"	Third Class,	1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 43, Regent-street, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London-bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with the necessary fare.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by rail, 4l. 4s. each; without conveyance by railway, 2l. 2s. (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August, 1854.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

WANTED, a PAIR of ORNAMENTAL (second hand) WROUGHT or CAST-IRON GATES, for entrance to private residence, about 8 feet wide by 8 feet high. Particulars, with lowest price, to Mr. C. YOUNG, Chipping Norton, Oxon.

F. ROBARTS, WELL-BORER and SINKER, 4, Saint John-street-road, Clerkenwell. Tools on Sale or Hire. Work done on the most reasonable terms. Old Wells made perfect by cleaning out or going deeper. Thirty years' experience.

PATENT SOLID SEWAGE MANURE COMPANY, incorporated by Acts of Parliament, 1852 and 1854.

For Purifying Sewage and other Feculent Waters, without exposure to the atmosphere.

For Collecting and Precipitating their Ammonia, Salts, and other Fertilizing Matters; and

For condensing all the Fertilising Ingredients into a solid manure.

Effected by one continuous operation under covered sheds.

The Directors are prepared to grant LICENCES to Town Councils, Local Companies, Engineers, and others, for the application in particular districts of the Company's Patent processes under their four existing Patents with all future improvements.

The complete efficiency of the processes has been proved on a large scale at Leicester, and the extensive permanent Works of the Company for purifying all the Sewage of that Borough, containing a population of between 60,000 and 70,000, are now approaching completion, and will be in operation in the course of a few months.

By the Company's Act of the present Session, all Town Councils, Commissioners, and other Public Functionaries are empowered to enter into contracts with the Company without obtaining a special Act for the purpose.

Information as to terms of licence may be obtained on application to the Company's Solicitors, Messrs. WILSON and BRISTOW, 1, Copthall-buildings, London; or to the Secretary, THOMAS PHIPPS, Esq. 40, Coleman-street, London.

By order of the Board,

London, July 17, 1854. THOS. PHIPPS, Secretary.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permancuy of colour, hardness, and brilliancy of surface, it is not affected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all the apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it is on produces a very inferior instead of a very superior paint, and the economy real sed by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 89, Upper Thames street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO., of 49, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in Kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks nine contracts effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK — LONDON — PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not lecompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 200 to 300 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 6d. and 8s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unobjectable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges park rooms, &c. 8s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 1s. per stone.

DAMP WALLS PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finishe l in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO Steam Mills, 2, Wellington-street Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Lawson Scott's Patent.)
CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply it in Powder as the best substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe

Zinc Paint is below the price of white lead, possesses equal body, and is perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT.—
FULLWOOD THOMPSON and CO. have commenced manufacturing Portland Cement at Bath Cement, at their Works situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parret.

These Cements are, they confidently believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

6, South Wharf, Paddington.

PORTLAND CEMENT.—
CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious properties, resists the action of frost and heat, and is more durable than any other Cement; does not vecetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by numerous of a recent discovery (patented) by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rooker's Wharfs, Holland-street, Blackfriars, Kings'and Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days —CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seed-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cement tious properties, that it is not affected by frost, and does not crack in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, BULL Light and Dark, equal to any made Manufacturers, Builders, and Plasterers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco finishers received by London Agents. BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects and Contractors, of the above, is the best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SEconds, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pratel-street, Paddington Green, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Medial Court. The statues of Australia, Venus de Medici and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the Fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and real cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING, is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering, it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster. London Agents Messrs. J. and G. WALLIS, 64, Long-acre Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Monster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' sheet-leading, plug ditto, brass work, &c. &c. sheet-lead, and patent pipe, plate, patent, silvered and crown glass, white-lead, oils, colours &c. 18s. PER CWT GIVEN FOR OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 50 per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or to Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

MILL WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main. Also PATTEN'S Improved Powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St. Paul's, London.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connell's Registered Model Water-closet."—This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE, MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO CONTRACTORS AND BUILDERS

BENNETT'S LOCOMOTIVE and SELF-ADJUSTING CENTERING for SEWERS and CULVERTS, is recommended as an immense saving of labour, materials, and loss of time incidental to striking, moving, and resetting. The striking has been so arranged as to insure an equal pressure on all parts thereby dispensing with the risk of crippling or throwing down the arch, five minutes only being required for striking, moving, and resetting a length of 20 feet, which length is sufficient for any quantity of sewer.—Further particulars can be obtained of JOSEPH JEFFREY BENNETT, Dover, Kent; or of Mr. JAS. HOLDSWORTH, 11, Shaftesbury-crescent, Vauxhall-bridge-road, Pimlico.—Licences granted.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled Iron, self acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages by means of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

THE SUPERIORITY OF JENNINGS'S CLOSETS ARE NOW GENERALLY ACKNOWLEDGED.

THEY ARE TO BE FOUND IN NEARLY EVERY HOSPITAL, ASYLUM, AND UNION THROUGHOUT THE UNITED KINGDOM.

They are IMPERISHABLE in their material, free from all complication, save the Lead-trap, displace no impure air, are as easily understood and fixed as a Cock to a sink, are cleaner and more efficient than any closet before the public.

As a proof of t. ese fact will suffice. Nearly three years since THIRTY-SIX of these Closets were fixed in GUY'S HOSPITAL, since then TWENTY more have been introduced, and their action has been so satisfactory, that H. CURRY, Esq. the Architect to ST. THOMAS'S HOSPITAL, has just introduced them throughout that building, as also JENNINGS'S LAVATORIES, URINALS, &c.

THE ROYAL APARTMENTS OF THE CRYSTAL PALACE ARE FITTED WITH THESE CLOSETS,

And Architects will find on inspection that they are fit for the MANSION or COTTAGE.

To prevent Cholera and Fever, all Drains should be properly trapped.

JENNINGS'S TRAPS

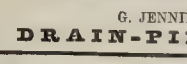
Will be found to work without stopping up, and the removal of the grating does not affect the principle of the Trap.

JENNINGS'S PATENT SHOP-SHUTTER SHOES SHOE AND SECURE SHOP SHUTTERS AT HALF THE COST OF THE TROUBLESOME AND DESTRUCTIVE SHUTTER-BAR.

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

G. JENNINGS solicits an inspection of his



NEW DRAIN-PIPES AND CONNECTIONS.

DOULTON AND WATTS,

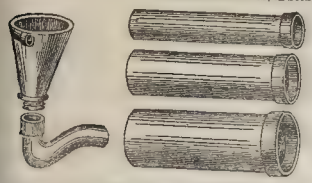
LAMBETH POTTERY, LONDON.

REGISTERED CLOSET-PANS IN ENAMELLED STONE WARE.

HENRY DOULTON and CO.'S DRAIN PIPES in GLAZED STONE WARE

OFFICES—HIGH-STREET, LAMBETH, LONDON, and Granville-street Wharf, Broad-street, Birmingham.
MANUFACTORIES—HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

May also be had as follows:—



BIRMINGHAM	Granville-street Wharf.	WOLVERHAMPTON	Mr. R. Shelton.
GLOUCESTER	Mr. Jesse Sessions.	TAUNTON	Mr. Geo. Pollard.
NORTHAMPTON	Messrs. Adkitt and Greensugh.	STRATFORD-ON-AVON	Messrs. J. Cox and Son.

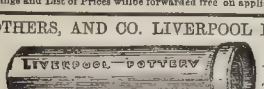
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 38, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.



Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; TURNER, 2 South Wharf, Pzaed-street, Paddington; COLWILL, Brothers, 39, Bridges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour street, Oxford-street

Drawings and List of Prices willbe forwarded free on application.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities.

REDUCTION of PRICE in SALT-GLAZED STONEWARE PIPES, BENDS JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET; TWENTY PER CENT. UNDER LIST PRICE.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the best quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London, Agent; or to
Mr. J. HUDSON, Agent, at the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO BE SOLD, FOUR good working CART-HORSES and CARTS.—Apply to Mr. ELDRED, Builder, Bleeding Heart-yard, Charles-street, Hatton-garden, between the hours of Twelve and Five o'clock, p.m.

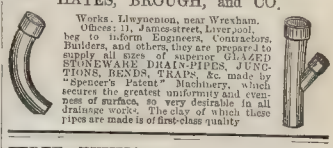
WANTED, a circular and upright SAW-BENCH. Any person having the above for sale (second hand), particulars and lowest price to be sent to X. Y. at Messrs. Boobyer's, 14, Stanhope-street, Clare-market.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—



Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horseshoe Wharf, No. 6, Upper Thames-street. C. Richardson's, South Wharf, Paddington.—G. Frith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

J. TURNER, Pottery, 2, South Wharf, Praed-street, Paddington.

Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

HAYES, BROUGH, and CO.

Works. Llwyenion, near Wrexham.
Offices: 31, James-street, Liverpool.
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality

SALES BY AUCTION.

TO ENGINEERS, IRON STEAM-SHIP BUILDERS, AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by Messrs. Samuda, Brothers (who are commencing their works as an extra ship building establishment at the ISLE OF DOGS), to Private Contract, the very complete ENGINEERING WORKS, at Orchard-place, Blackwall, lately erected by them, and now in full operation, and containing about 1 acre of land on the river Lea, near the junction with the Thames, were planned by the present firm, and are well fitted up in all respects suitable and ready to carry on, complete, and in all respects suitable and general engineering, the manufacture of marine engines and general engineering works without any additional outlay. The position and arrangement of these premises allow the erection of steam machinery to any vessel moored on the wharf, without the necessity of undocking, which can be safely effected by reason of the absence of steam traffic on the river, and for which all vessels for steam trade on the river, and for which there has been placed on the premises a large steam crane. Coals can be landed direct from the colliers, lighters of the river Lea, and from the Eastern Counties Railway, and the transit of goods, either coasting, by canal, or railway, can be effected with the greatest facility. The buildings are mostly substantial, they were erected for the present owners by Messrs. Grissell, they were erected for the present owners by Messrs. Grissell, and no less than a few years old, and are arranged as convenient. Light and lofty workshops. The machinery and tools are by the first makers, and with all modern improvements. There are suitable foreman's and watchman's houses attached to the works. Part of the purchase money may remain on mortgage, or the premises will be let on lease at a rack rental, subject to the machinery only being valued for a valuation. Further particulars may be had of Messrs. FULLER and HORSEY, Billiter-street, London.

TO IRONFOUNDERS, ENGINEERS, AND OTHERS. TO BE SOLD by AUCTION, by

MESSRS. FULLER and HORSEY, on MONDAY, SEPTEMBER 14, 1834, at TWELVE o'clock, on the PREMISES, Suffolk-grove, Suffolk-street, Southwark, in lots, the PLANT and GOOD WILL of an IRONFOUNDER; two horse power steam engine and boiler, small double cylinder steam-engine and boiler, double cylinder blast engine, lot of patent fan, cupola, erection of drying stove, twenty-nine rigger patterns, sash, and casement patterns, set triangle, crab, crane, erection of parts of counting-house, and numerous other effects.—To be viewed on SATURDAY previous to the sale, where catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Billiter street, City

Freehold Building Ground and Three substantial brick built semi-detached Villa Residences, close to the Station at Ealing, Middlesex, for positive sale, by order of the proprietor, leaving England through ill-health.

MR. PETER BROAD has received instructions to offer for SALE by AUCTION, at GARRAWAY'S, Change-alley, Cornhill, on WEDNESDAY, AUGUST 20th, at TWELVE o'clock, THIRTY-FIVE PLOTS of FREEHOLD BUILDING GROUND, in a first-rate situation for the erection of houses of moderate pretensions, which are in great demand in the neighbourhood. Also, TWO SEMI-DETACHED VILLA RESIDENCES, each containing ten rooms, coach-house, stable, &c. are suitable for the residences of respectable families, the whole delightfully situate, and within 12 yards of a new railway station. Also, a SEMI-DETACHED and DETACHED DWELLING-HOUSE, containing seven bed-chambers, handsome drawing and dining rooms, sterling into conservatories and on to the back and front lawns, adjoining the two houses, coach-house, loft, man's room, poultry house, and large kitchen and flower gardens.—May be viewed and particulars had at Garraway's; of Messrs. Wright and Bowen, London-street, City; or of Mr. PETER BROAD, 29, Tavistock-street, Covent-garden.

WINDSOR, BERKS.—Important Sale of Twenty-six first-class Freehold Villa Residences, and valuable Building Frontages.

MESSRS. BUCKLAND and SON have been favoured with instructions from the Proprietor to submit to PUBLIC COMPETITION, at the WHITE HART HOTEL, Windsor, on TUESDAY, AUGUST 26, at ONE for TWO o'clock, in lots, the following valuable and important PROPERTY, unless before the public competence of the failure of the conditions to fulfil their seconds. TWENTY-SIX first-class semi-detached FREEHOLD RESIDENCES, now in the course of erection, containing eight rooms each, of large dimensions, substantially built on the best and most improved principle, with good garden. Twelve of the houses are nearly completed, and the remaining fourteen are in carcase. Also, a long piece of superior Building Frontage adjoining, which will be subdivided in suitable lots. This most desirable property is situate on the Clarence Estate, near to the Crescent, in the vicinity of the New Priory Estate; and the villas now about to be sold are in good keeping with, and intended to correct at the desire of the promoter of that laudable undertaking, for the general improvement of the town of Windsor, which is rapidly rising into estimation, and affords an unusual opportunity for profitable and safe investment. May be viewed at any time on application to Mr. Jennings, on the Clarence Estate; and particulars, with conditions, may be obtained ten days previous to the sale, of Messrs. Poole and Edwards, Solicitors, 3, Frayfield-square, London; of Messrs. Haslam and Buckland, 3, Cannon-street West, City; and at the Offices of Messrs. Buckland and Son, Auctioneers, Land Surveyors, and Valuers, Park-street, Windsor.

Fifth Sale of the Surplus Property belonging to the North London Railway Company, with votes for the county of Middlesex.

MESSRS. BEADEL and SONS have received instructions from the Directors of the above Company to SELL by AUCTION, at the MART, on TUESDAY, the 30th SEPTEMBER, at TWELVE, in numerous Lots, the Fifth Portion of the valuable FREEHOLD SURPLUS PROPERTY adjoining the railway in Bromley, with frontage to Devon's-lane and Shepperd-street; at Hackney, eligible Building Plots, with Church-road and New-road, with large freehold Building Land at Kingsland, close to the Railway Station, and abutting upon the Regent's Canal, in Dalston. Particulars may be obtained of Messrs. Tyrrell, Paris, and Lavers, Solicitors, Guildhall-yard; and of Messrs. Beadel and Sons, 26, Gresham-street, London.

TO TIMBER MERCHANTS, BUILDERS, CABINET AND COACH MAKERS, SHIP BUILDERS, WHEELWRIGHTS, AND OTHERS.

ROBERT WARD has received instructions to SELL by AUCTION, on the PREMISES, Bermondsey New-road, Southwark, on WEDNESDAY and THURSDAY, the 8th and 9th SEPTEMBER, 1834, at ELEVEN for TWELVE o'clock, in consequence of the premises being let, the entire STOCK of a Timber Merchant, consisting of about 2,000 dry yellow pine planks, deals and battens, 1,800 white and yellow deals and planks, 100 pieces Baltic timber, 200 English oak trees, 40 loads of dry English ash plank, dry beech and oak planks, 10,000 oak staves, logwood for dying, beech and plank, elm stocks, oak posts and rails, dry mahogany in planks, boards, and veneers, cut deals, &c. Also two timber carriages, cart, truck, chaise, and plant, three young powerful cart horses and chaise mare, harness, utensils in trade, and household furniture, including a handsome, &c.—May be viewed two days prior and morning of sale. Catalogues had in due time of the Auctioneer, No. 8, Oxford-street.

CHARLTON GROVE, Charlton Kent.—Building Materials.

MR. W. R. GLASIER will SELL by AUCTION, on the PREMISES, opposite the Bugle Horn, Charlton, on TUESDAY, SEPTEMBER 2, at TWELVE for ONE, the BUILDING MATERIALS of Lodge, Laundry, Stabling, Ice-house, Boundary wall, Bridge, to clear the ground for building, comprising 200,000 capital stock bricks, excellent fir timber in joists, rafter, &c. floorings, pan, plain, and paving tiles, doors and sashes, lead, zinc, copper, parlour entrance-gates, two rain-water house gates, usual fittings of stable, fixtures, and other effects.—May be viewed the day prior and morning of sale; and catalogues had at the Bugle Horn, Charlton; of Messrs. Lethbridge and Mackrell, Solicitors, 25, Abingdon-street, Westminster; and of the Auctioneer, 41, Charing-cross.

SALES BY AUCTION.

GRAVESEND, KENT.

MR. CHARLES JOHNSON will SELL by AUCTION, at the NEW INN, Gravesend, on WEDNESDAY, AUGUST 20, at ONE for TWO o'clock, in two lots, TWO substantially erected and well-arranged PRIVATE RESIDENCES, situate and known as Nos. 2 and 3, Belvidere-crescent, Harmer-street, of the yearly rent of 26l. per annum; each held for an unexpired term of 72½ years from Michaelmas, 1834, at a ground rent 6s. per annum, and liable to pay a moiety of the expense of keeping in front in repair. Particulars and conditions of sale may be obtained of Messrs. Hudson and Arnold, Solicitors, Gravesend; of G. H. Knight, Esq. Solicitor, 5, Essex-court, Temple, London; *Bell and Journal* Offices, Maidstone and Rochester; Bull Inn, Dartford; at the Place of Sale; and of Charles Johnson, Auctioneer, 188, Parrock-street, Gravesend

GRAVESEND, KENT. Valuable Freehold Building Land.—By MR CHARLES JOHNSON, at the NEW INN, Gravesend, on WEDNESDAY, AUGUST 20, at ONE for FOUR precisely, in 24 lots, the remainder portion of the MILTON-PARK ESTATE, situate within a short distance of the Terminus and Railway Station, consisting of eligible freehold building sites land tax redeemed, with frontages to the Grove, Parrock-street, Wellington-street, and Waterloo-street. The present will be the last opportunity of obtaining either single and eligible sites of freehold land for the erection of houses upon this estate; persons therefore desirous of building upon their own freehold plots, are respectfully requested not to neglect the opportunity of securing them in the early part of the season. Particulars and conditions of sale, with plans, may be obtained of Messrs. Helder and Arnold, Solicitors, Gravesend; G. H. Knight, Esq. Solicitor, 5, Essex-court, Temple; London; *Gazette* and *Journal* Offices, Rochester and Maidstone; Bull Inn, Dartford; at the Place of Sale; and of Charles Johnson, Auctioneer, 188, Parrock-street, Gravesend

Important and Valuable Freehold Estate, land tax redeemed, close to the Horsley Station on the great Northern Railway, within two miles of the Tottenham Station on the Eastern Counties line, and within a quarter of an hour's ride of the metropolis.

MR. ELLIS is directed to SELL by AUCTION, at GARRAWAY'S, Cornhill, on THURSDAY, 21st SEPTEMBER, at TWELVE, in eighteen lots, unless previously disposed of by private treaty, about SEVENTY-FIVE ACRES of FREEHOLD LAND, situate between the Southgate-road and Lordship-lane, possessing at present frontages to these roads, but will be plotted out, and new roads formed, to afford frontages to intended main roads, thus presenting sites either for the erection of detached villas with requisite grounds, or to resell in lots, and affording a most desirable opportunity to capitalists, land and building societies, and others, for safe and profitable investments. Particulars, with plans, may be obtained of Messrs. Rooper, Esq. Solicitor, Temple; Hunter-street; of Messrs. Hammack and Lambert, Architects and Surveyors, 79, Bishopsgate-street; at the Railway Hotel, Hornsey; of Mr. Carr, Lordship-lane, who will show the estate; at Garraway's; and at the Offices of the Auctioneer, 18, Minories, City.

To the wealthy Capitalist, Merchant, or Professional Man seeking retirement in the country, or enterprising Builders

At REIGATE—One of the finest and most attractive freehold estates in this much-admired and popular neighbourhood.

MR. WM. THORNTON has the honour to announce that he has been favoured with instructions to submit to PUBLIC COMPETITION, at the MART, early in SEPTEMBER next, unless an acceptable offer should be previously made for the private sale, a singularly fine ESTATE, distant five fields only from the Redhill station, and commanding scenery of surpassing beauty, extending for the vale of Holmesdale; in extent about eighty acres, and free from land-tax. This property is undoubtedly the most attractive feature of the neighbourhood; it is beautifully timbered, and possesses an abundance of building stone; it will be offered in lots sufficiently large to secure an enviable site for a first-class villa, with several acres of park like land adjoining, placing the possessor within half an hour's ride either of London or Brighton, and at last presenting the opportunity so long sought for, of acquiring a freehold residence, with land, in a locality which bids fair to rival the most favoured, as it is proverbially the most healthful district in the home counties, and possessing the facility of railway communication. Full descriptive particulars, with plans and conditions of sale, will be issued fourteen days previously to the auction, and may be had at the Red Hart Inn, the Junction Hotel, Redhill; and other principal Inns in the vicinity; or they will be forwarded by post on receipt of four postage stamps, by Mr. W. Thornton, Land Agent, Surveyor, and Auctioneer, Reigate.

Freehold Building Land at Maidstone, opposite the first mile stone on the Tunbridge-road (a situation that cannot be surpassed in the neighbourhood in the richness, variety, and beauty of its scenery).

MR. TOOTELL is directed to SELL by AUCTION, at the QUEEN'S HEAD INN, MAIDSTONE, on WEDNESDAY, SEPTEMBER 27th, at ONE o'clock, in thirteen lots, ELEVEN ACRES of exceedingly valuable BUILDING LAND, lately forming the pleasure grounds of the Manor House, the residence of Thomas Hyde, Esq. having a frontage in the south side of 500 feet to the turnpike road, and frontages of about 1,300 feet to the new road intended to be made across the land and to join the road at the rear of Mr. Hyde's estate, there by affording another access to and from Maidstone. The land slopes to the south, and contains fine veins of ragstone and brick earth. The lots will be marked out by the 6th of September, and may then be viewed, when particulars, plans, and conditions of sale may be had of Messrs. W. and S. Coppin, Solicitors, 7, Lothbury, London; at the Auction Mart, London; at the Crown Inns, Tonbridge and Sevenoaks; at the Sun, Cham; New Falcon, Gravesend, at the Place of Sale; and of Mr. Tootell, Land Surveyor, Maidstone.

Important Sale. To Railway Companies and Carriage Builders, Engineers and Others

MR. LEREW is favoured with instructions from Messrs. Fox, Henderson, and Co. to SELL by AUCTION, at the WAREHOUSE, No. 34, Eastcheap, City, on THURSDAY, OCTOBER 2, at TWELVE for ONE, SEVENTY SETS of RAILWAY CARRIAGE WHEELS, for the four-wheel first and third-six second-class carriages, comprising buffer-rods, draw-bars, coupling screws, axle boxes, steps, irons for guards' seats, lamps, door fittings, and all necessary straps, brackets, &c. for the under-frames. The whole are of the very best material and first-class workmanship, and complete in every respect, with the exception of wheels, axles, and springs. These fittings are made for narrow gauge carriages, similar to those used on the London and North-Western Railway. Purchasers may be supplied with complete carriages of the whole or any part set.—To be viewed ten days prior to the sale. Catalogues will be ready on SEPTEMBER 1st, and may be obtained at the Stork Hotel, Birmingham; Royal Hotel, Liverpool; at the Place of Sale; and of Mr. Lerew, City; and of the Auctioneer, Carlington-street, Hampstead-road, London.

WOOD-GREEN, TOTTENHAM. Large Oak Timber Trees, Oak Pole, Topwood, &c. By

MR. RICHARDS, on the PREMISES, Wood-green Common, near the Hornsey Station on the Great Northern Railway, on THURSDAY, SEPTEMBER 7th, at ONE o'clock, SIXTY fine OAK TREES, of large size and remarkably clean growth; also a quantity of large oak and elm poles and topwood. The timber is lying by the side of good roads about five miles from London.—May be viewed. Catalogues obtained at the lodge on the common; at the Jolly Butchers, Woodgreen; Green Man, Muswell-hill; Flower-pot, Bishopsgate-street; and of the Auctioneer, Tottenham.

STRAND.—Materials of House and Premises, Duke-street, Adelphi, about 80,000 Stock Bricks, Lead, Iron Palisade Fence, &c. By

MR. RICHARDS, on the PREMISES, No. 23, corner of Buckingham-street, Strand, on TUESDAY, AUGUST 26, at TWELVE o'clock, in lots; comprising batten and other floors, with oak and fir joists; timbers of roof, sashes, and frames, doors, closets, stairs, partitioning, marble chimney-pieces, register and other stoves, ranges, coppers and other fixtures, quantity of lead, in flats, gutters, pipes, and large cast lead cistern, plain tiles, York copings, paving, Portland sills, and various materials.—On view. Catalogues obtained of Mr. Robert Gray, Land and Estate Agent, 33, Southampton-street, Strand; on the Premises; and of the Auctioneer, Tottenham.

TO BUILDING MATERIAL DEALERS, BUILDERS, AND OTHERS.

FIRST PORTION of the BUILDING MATERIALS on the SITE of the NEW JUNIOR UNITED SERVICE CLUB-HOUSE, Charles-street, St. James's, TO BE SOLD by PUBLIC TENDER, the Fittings of the House; Nos. 14, 15, and 16, St. Alban's-place, comprising glazed sashes and frames, doors, chimney-pieces, staircases, closets, skirtings, linings, stoves, ranges, gratings, and other fittings and fixtures of the above ten-roomed modern houses, in excellent condition, and readily convertible to building purposes.—The Premises may be viewed, and further information with form of Tender may be obtained at the Offices of Messrs. NELSON and INNES, 38, Regent-circus, Piccadilly, where the Tenders are to be delivered on THURSDAY, 21st AUGUST, at TWELVE o'clock.

FREE TRADE FREEHOLD LAND SOCIETY Offices No. 88, St. James's-street, Pall-mall, and 24, Moorgate-street, City.

THE SEVENTH PUBLIC DRAWING will take place on TUESDAY EVENING, SEPTEMBER 9th, 1834, at the SOCIETY'S OFFICES in St. James's-street, at EIGHT o'Clock.

The CAMBERWELL ESTATE first portion will be ALLOTTED on WEDNESDAY EVENING, SEPTEMBER 24th, at SIX o'Clock. The estate lies within the three mile circle, and is admirably adapted for building purposes.

Plans and conditions may be had, price 6d.; and a list of rights for sale seen at the offices of the Society.

THOMAS SHERWOOD SMITH, Secretary.

August 19th, 1834.

TWENTY-FIRST PUBLIC DRAWING.—SECOND ANNIVERSARY of the CONSERVATIVE LAND SOCIETY, On THURSDAY, SEPTEMBER 7th, at ENTER HALL, after the transaction of the regular business of the QUARTERLY MEETING, at THREE o'clock, the DRAWING for ONE HUNDRED RIGHTS of CHOICE on the Society's estates will take place, and FIFTY SHARES will be added by rotation, if the last number so placed on the order of rights by date of membership have already 1,146. Drawn shares, if in arrear at the drawing, lose their privilege. Rights may now be exercised either to select lots on estates, or to enable the holders to advances for building. Shares 50l.; monthly payments, 8s. Plans of the estates, prospectuses, and circulars as to building advances, may be had of

CHARLES LEWIS GRUNEISEN, Secretary.

NATIONAL FREEHOLD LAND SOCIETY, 14, Moorgate-street, London RED-HILL, near REIGATE, SURREY. Plans of the Redhill Estate, with conditions of sale, are now ready, and may be had on application at the Office.

W. E. WHITTINGHAM, Secretary.

21st August, 1834

IMPORTANT TO BUILDERS AND OTHERS.

CONSERVATIVE LAND SOCIETY.—ADVANCES upon buildings erected on the various estates will be made in the following manner:—The whole of the amount of loan will be advanced without any deduction whatever, and the interest, the costs of mortgage, release, and surveyor's fees for approval of plans and surveys, included in the monthly repayments. One-half the cost up to that time advanced when building is roofed in, and two-thirds of the total cost when building is completed. The remainder of the amount, lus. per cent. per month for a fixed term of seven years from completion. Redemption of a mortgage by one payment, or more fees, may be made at the end of any quarter, according to a published table. The above plan offers an advance of 100l. upon a carcase say for six months, and an advance of 200l. for the period of twelve months at a cost of 3l. 19s. 4d. in full of interest, law costs of mortgage and release, surveyor's fees at all-over, and all office charges. The plan also offers this remarkable feature, that the balance of mortgage supposed to be paid off in the preceding example at the end of twelve months, amounting to 197l. 11s. 4d. may be paid off by monthly instalments of 2l. 5s. extending over seven years. The sale, therefore, of a house, as in the above example, is materially facilitated; for supposing the purchase money 300l. the mortgage due to the society 197l. 11s. 4d. may be transferred at a cost of 30s.; and thus the purchaser is only required to produce 112l. 8s. 8d. at time of purchase. According to ordinary practice, when the money is lent through a public subscriber, the mortgage money is called in up-on sale or transfer. Builders, by becoming members and taking allotments, may build upon their own freeholds, and seven-eighths of the purchase-money of the land may remain on mortgage. Advances only made to members qualified by rights of choice, on terms and conditions to be had at the Office of the Society, 14, Moorgate-street, London, and at the Offices of the several estates; and enable a member to borrow, for building purposes, 50l. in addition to the cost paid on a completed share.

CHARLES LEWIS GRUNEISEN,
Norfolk-street, Strand, 17th August, 1834.

TO BE SOLD, the CARCASSES of THREE SIX-ROOMED and THREE FIVE-ROOMED HOUSES, at STRATFORD, near Railway Works. Price 95l. half of which may remain for the present Term, one hundred years from Christmas last, ground rent, 1l. 1s. INSTRUCTION in ART.—The AUTUMN SESSION of the NORMAL TRAINING SCHOOL of ART at the Board of Trade, Department of Science and Art, will COMMENCE 2nd OCTOBER, 1854.

Art Superintendent—RICHARD REDGRAVE, R.A.

The course of Instruction imparts systematically a knowledge of the scientific principles involved in art, especially in its relations to the useful purposes of life, with the view of training masters for teaching schools of art, and preparing students to enter upon the future practice of decorative art in manufactures, to establishments, to masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to pursue scientific study without reference to a preparation for any special branch of industry. Special classes are also arranged to train schoolmasters to approach and use their schools to teach elementary drawing as a part of general education concurrently with writing.

For prospectuses, terms of admission, &c. apply at the Offices, Marlborough House, Pall-mall, London.

COMPETITIONS.

TO ENGINEERS AND ARCHITECTS.

WIDENING of BIDEFORD BRIDGE, DEVON.—The Feoffees of the Bideford-bridge Trust and the Town Council of Bideford are desirous of receiving DESIGNS and PLANS for WIDENING the BRIDGE to the extent of 16 feet for carriages and from 3 to 10 feet for foot passengers at least, accompanied by estimates of the expense. A premium of £60 will be given for the best design, £20 for the second best, £10 for the third best, and £10 for the fourth best, and a preference will be given to the design which combines the greatest economy with elegance, and durability. The Bridge may be inspected at any time by applying to the Bridge Steward, or to Mr. THOMAS MARTIN, Bridgewarden; and the designs and estimates are to be sent on or before the 8th day of SEPTEMBER next, free of expense to Mr. C. HOLE, Bridge Steward, Bideford, from whom any further information may be obtained. The Advertisers do not pledge themselves to adopt either of the designs.

Bideford, 22nd August, 1854.

CITY of ELY.—DESIGNS for NEW BURIAL GROUND CHAPELS.—NOTICE is HEREBY GIVEN that the time for sending in the designs for the above chapels will be extended to FRIDAY, the 15th of SEPTEMBER, instead of the 8th, as advertised last week.—AND FURTHER, that the Burial Board will not require Working Drawings and Specifications, but only a Design and Estimate. The Board does not pledge itself to employ the Architect whose Design shall be selected. By order of the Board, W. MARSHALL, Clerk.

Ely, August 30th, 1854.

WIDENING of BIDEFORD BRIDGE.—The TIME for the delivery of the Designs and Estimates is EXTENDED to the 31st OCTOBER; and it is requested that the Designs and plans may be drawn on the scale of 1 feet to the inch.—Bideford, 30th August, 1854.

CONTRACTS.

ORDNANCE CONTRACTS.—TENDERS are invited for the necessary work to be done in LAYING DOWN PIPES and proving and fixing the necessary PIPINGS, &c. for the supply of GAS to the CAVALRY BARRACKS at York. Notice is hereby given, that the Honourable Board of Ordnance will receive TENDERS on or before WEDNESDAY, the 6th SEPTEMBER, 1854, from such persons as may be willing to perform the above mentioned works. Specifications for these works are to be seen, and forms of Tenders obtained, with every other information, on application at the Royal Engineer's Office, No. 5, New-walk-terrace, York, any day (Sundays excepted) between TEN and FOUR o'clock, until TUESDAY, the 5th SEPTEMBER, 1854.

Royal Engineers' Office,
No. 5, New-walk-terrace, York, 17th August, 1854.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer of the Woolwich District hereby gives Notice, that the Honourable Board of Ordnance are about to enter into a special CONTRACT for BUILDING a RIVER WALL, on the Essex side of the Thames, and that such persons as may wish to Tender for the same may inspect the plan, and obtain a copy of the specification and form of Tender for the work, by applying to Mr. CARTWRIGHT Clerk of Works, at the Royal Engineers' Office, Royal Arsenal, Woolwich, on or before the 4th of SEPTEMBER, 1854, between the hours of TEN and FOUR.

Tenders upon the printed form prepaid, to be delivered at the Office of Ordnance, Pall-mall, London, on the 6th of SEPTEMBER, 1854, addressed to the Secretary to the Honourable Board of Ordnance, and marked "Tender for Work at Woolwich."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, 23rd August, 1854.

BRISTOL LOCAL BOARD of HEALTH.

To PAVIORS and OTHERS.—The Local Board of Health of the City and County of Bristol hereby give Notice, that they intend to CONTRACT for Three Years, commencing the 29th day of SEPTEMBER next, for the performance of the undermentioned Works, viz.: CARRIAGE WAYS.

1st. For Hauling Stones from any place within the City and County of Bristol, and Lay no the same in the Streets.

2nd. For Reforming Old Pelled Stones

3rd For Hauling and Laying Rag Pitching.

4th. For Relaying Rag Pitching.

Any persons or persons willing to engage in the above works are requested to deliver in their estimates at the offices of the said Local Board of Health, No. 13, Prince-street, on THURSDAY morning, the 7th day of SEPTEMBER next, at TEN o'clock precisely, when the Committee will meet to determine upon the same. Printed specifications of the work to be done, and a form of Tender, may be previously had, either on personal application to the Surveyor, Mr FREDERICK ASHMEAD, C.E. or by letter, post-paid, addressed to the Clerk, at the Offices of the Local Board of Health, No 13, Prince-street, Bristol. The party tendering will be required to give the names of two sufficient sureties for the due and faithful performance of his contract. The Committee will not hold themselves bound to recommend to the Local Board the acceptance of the lowest or any Tender.—By order of the Committee.

JAMES HARRIS, Clerk.

Local Board of Health Offices, 13, Prince-street,
16 h August, 1854.

BRISTOL LOCAL BOARD of HEALTH.

TO BUILDERS, CONTRACTORS, AND OTHERS.

The Committee of the Bristol Local Board of Health hereby give Notice, that they are ready to receive TENDERS from Parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTION, and COMPLETING and FINISHING, certain intended BRICK SEWERS, as follows viz.:—

CONTRACT No. 1. Main Sewer, from Cotham-lane into the River Avon, about 2 270 yards in length.

CONTRACT No. 2. Main Branch Sewer, along the White Ladies'-road, north and south, about 2,05 yards in length.

CONTRACT No. 3.—Main Branch Sewer, in Richmond Park road, about 2,255 yards in length.

CONTRACT No. 4.—Main Branch Sewer, for Cotham and Kingsdown, about 2,208 yards in length.

Any person or persons willing to engage for making any, or either, or all of the before-named sewers, are requested to deliver separate Tenders for each of the said Contracts, at the Offices of the Local Board of Health, No 13, Prince-street, on THURSDAY morning, the 28th day of SEPTEMBER next, at ELEVEN o'clock precisely, when the Committee will meet to determine upon the same.

Plans, sections, and specifications of the works to be done, may be seen at the Offices of the Local Board of Health, No. 13, Prince-street, Bristol; and any further information may be obtained either on personal application, or by letter, post-paid, addressed to the Surveyor, Mr. FREDERICK ASHMEAD, C.E.

The party tendering will be required to give the names of two responsible persons within Bristol to become sureties for the due performance of the works.

The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until the proposed sureties are approved.

By order of the Committee,
JAMES HARRIS, Clerk.

Local Board of Health Offices, 13, Prince-street, Bristol,
24th August, 1854.

WARWICK UNION.—Parish of LEAMINGTON PRIORS NEW VALUATION.—The Board of Guardians of the Warwick Union are desirous of receiving TENDERS from competent persons for a new SURVEY and VALUATION of the MESSUAGES, LANDS, and other Hereditaments liable to Poor-rates in the parish of Leamington Priors, in this Union. The valuation will be required to be made in accordance with the provisions of the Act 6th and 7th Wm. 4, c. 96, to Regulate Parochial Assessments, and in conformity with the terms of a written agreement approved by the Poor-law Board, to be executed previous to the new survey and valid from being made. Persons willing to Tender for making such survey and valuation are requested to furnish the Board of Guardians with written Tenders stating the sum at which they will make the same, and to forward them under seal, endorsed "Tender for New Valuation of the Parish of Leamington," to the Clerk to the Board on or before FRIDAY, the 8th SEPTEMBER next. The Board do not pledge themselves to accept the lowest or any Tender.

By order of the Board,
WM. HARRISON, Clerk.

Theatre-street, Warwick, Aug 19, 1854.

TO ROAD MAKERS, CONTRACTORS, &c.

BOROUGH of DERBY.—COVERING BROOK COURSES and SEWERAGE WORKS.

TENDERS WANTED

The Local Board of Health of this Borough are prepared to receive TENDERS for the execution of the following WORKS, which will be let in One Contract, viz.:

Covering over and Converting into BRICK SEWERS, Two Open Brook Courses in Derby, known as the Littlewear Brook and the Markeaton Brook, the gross estimated length required to be so covered being about 2,170 yards. And

Constructing several BRICK and PIPE SEWERS along the Osmaston-road and Street, London-road and Street, Canal-street, Ashbourn-road, Friar-gate, and Market-place and Street, in the said Borough, the gross estimated length of the whole being about 2,500 yards of Brick, and 420 of Pipe Sewers.

Where the Sewers are required to be of Glazed Stoneware Pipes, such materials will be provided by the Board.

Each Tendering must not only state in one sum the amount for which they will execute the above mentioned works, but also furnish according to a prescribed form of Tender, to be had on application) a schedule of prices at which they will execute any additional works for Street or House Drainage, if necessary, connected with the above.

Plans, outlook, specification, and form of Tender, will lie for inspection at the Office of the Local Board, Derwent-street, on and after FRIDAY, the 1st of SEPTEMBER, and further information may be obtained on application to Mr. THORBURN, the Surveyor.

Tenders, sealed and endorsed, "Sewerage Works," addressed to the Clerk of the Board, must be received on or before MONDAY, the 18th day of SEPTEMBER next.

The lowest or any Tender will not necessarily be accepted.

By order,
JOSEPH JONES,
Derby, Aug. 24th, 1854. Clerk to the Board.

TO PAVIORS, MASONS, &c.

ST. JAMES, WESTMINSTER.—The Commissioners for Paving, &c. the above Parish, will meet in the VESTRY ROOM, in the Churchyard, Piccadilly, on WEDNESDAY, the 6th of SEPTEMBER next, at ELEVEN o'clock in the forenoon, to receive TENDERS and enter into CONTRACT with persons willing to supply QUERN-EY GRANITE, and to perform such PAVIORS' and MASONS' WORKS as may be considered necessary to be done in certain streets and Places in the Parish, for the term of One Year from Michaelmas day next. Printed Forms of Tenders, which alone will be received, together with other information, may be obtained, and specimens of the several sorts of materials to be contracted for inspected, by applying at the Surveyor's No. 64, Dufour's-place, Broad-street, between NINE and ELEVEN daily. No Tender will be received after a QUARTER past ELEVEN on the morning of meeting, the 20th of SEPTEMBER; neither will the Commissioners bind themselves to accept the lowest.

September 1st, 1854. J. YORK, Clerk to the Commissioners.

CONTRACTS.

TO BRICKMAKERS DUST-COLLECTORS, AND OTHERS.

THE KENSINGTON IMPROVEMENT COMMISSIONERS will meet at the Vestry-hall, Kensington, on WEDNESDAY, the 6th day of SEPTEMBER next, at 7 o'clock in the evening, to receive TENDERS and to CONTRACT for the SALE and REMOVAL of the COALDUST Cinders, Ashes, and Rubbish from the houses and premises within the parish of St. Mary Abbotts Kensington from the 29th day of September, 1855, to the 29th day of September, 1856, inclusive. The contract will have to enter into a bond and to provide two sureties for the due performance of his contract. The contractor must pay immediately one-fourth part of the money offered by him, and the advance of three months' payments in advance of each quarter. The Commissioners have divided the parish into two districts, who may be tendered for jointly or separately. Forms of Tender and particulars may be obtained on application at the Commissioners' Offices, Vestry-hall. Tenders to be endorsed "Tender for Dust," and to be delivered at the Clerk's office, Vestry-hall, on or before FOUR o'clock on WEDNESDAY afternoon, the 6th day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender.

By order of the Commissioners. REUBEN GREEN, Clerk.

August 23, 1855.

TO SCAVENGERS, CARTERS, AND OTHERS.

THE KENSINGTON IMPROVEMENT COMMISSIONERS will meet at the Vestry-hall, Kensington, on WEDNESDAY, the 6th day of SEPTEMBER next, at SEVEN o'clock in the evening, to receive TENDERS and to CONTRACT for CARRYING and CARRYING AWAY, daily from all streets and public places within the said parish, all the DUST, dirt, road-scrapings, sweepings, soil, and refuse, and to see that may be collected together by the servants of the said Commissioners, and as may be directed by Mr. JAMES BRIDGEMAN, the Commissioners' Surveyor, from the 29th day of SEPTEMBER 1855, to the 29th day of SEPTEMBER, 1856 inclusive; and also to receive Tenders and to enter into the same for CARRYING and CARRYING AWAY, after the 31st day of December next. The Commissioners have divided the parish into two districts which may be tendered for jointly or separately. Forms of Tender and particulars may be obtained at the Commissioners' offices, Vestry-hall. Tenders to be sealed and endorsed, "Tender for Scavenging," and "Tender for Carting," as the case may be, and to be delivered at the Clerk's office, Vestry-hall, on or before FOUR o'clock on WEDNESDAY afternoon, the 6th day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender. The expense of the contract and bond to be paid by the contractor.—By order of the Commissioners.

REUBEN GREEN, Clerk.

August 23, 1855.

TO SCAVENGERS, CARTERS, AND OTHERS.

THE KENSINGTON IMPROVEMENT COMMISSIONERS will meet at the Vestry-hall, Kensington, on WEDNESDAY, the 6th day of SEPTEMBER next, at SEVEN o'clock in the evening, to receive TENDERS and to CONTRACT for CARRYING and CARRYING AWAY, daily from all streets and public places within the said parish, all the DUST, dirt, road-scrapings, sweepings, soil, and refuse, and to see that may be collected together by the servants of the said Commissioners, and as may be directed by Mr. JAMES BRIDGEMAN, the Commissioners' Surveyor, from the 29th day of SEPTEMBER 1855, to the 29th day of SEPTEMBER, 1856 inclusive; and also to receive Tenders and to enter into the same for CARRYING and CARRYING AWAY, after the 31st day of December next. The Commissioners have divided the parish into two districts which may be tendered for jointly or separately. Forms of Tender and particulars may be obtained at the Commissioners' offices, Vestry-hall. Tenders to be sealed and endorsed, "Tender for Scavenging," and "Tender for Carting," as the case may be, and to be delivered at the Clerk's office, Vestry-hall, on or before FOUR o'clock on WEDNESDAY afternoon, the 6th day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender. The expense of the contract and bond to be paid by the contractor.

By order of the Commissioners.

REUBEN GREEN, Clerk.

August 23, 1855.

WEST DERBY HUNDRED, LANCASHIRE.—To BUILDERS and Others.—TENDERS will be received for Widening and Repairing DAM HOUSE BRIDGE, in the Township of SUTTON, as before Mr. NOAH HUMPHREYS, on SEPTEMBER next directed to Mr. A. B. CLAYTON, Bridge Master, Eccleston Village, near Liverpool, where the Plans and Specification may be inspected. The Tenders to be sealed and endorsed "Tender for Dam House Bridge." The lowest Tender will not be accepted unless signed by two of the Magistrates of the West Derby Hundred of the County Palatine of Lancashire, A. B. CLAYTON Bridge Master.

Exeter, 24th August 1855.

LOCAL BOARD of HEALTH, KINGSTON-UPON-HULL.—CONTRACT for SCAVENGING, SCAVENGING, SWEEPING STREETS, &c.—The Local Board of Health of Kingston-upon-Hull, are ready to receive TENDERS for a CONTRACT for the performance of the following Work, on the Public Roads, Streets, and Places of the Township, during the Year:—1st. The Daily Scavenging of the Streets, Courts, Alleys, and Footways, and the Cleansing of the Public Sewers and Drains, except that part of the Borough on the East side of the River Hull.

2nd. The COLLECTION of NIGHT SOIL in the morning, within the hours regulated by the Board.

3rd. The COLLECTION of DRY DUST within the daytime by Day-work.

4th. The SWEEPING of the STREETS, and the Removal of the Sweepings from the Streets.

5th. The REMOVAL of FILTH from the Cleansing of Sewers, Drains, and Privies, except as before excepted.

6th. The WATERING of STREETS.

And it is agreed by the Contractor that the Tender may include the CARTAGE, DEPOSITING, and SPREADING of the Materials, Dust, Soil, and Filth collected by the Contractor, or otherwise upon the Roads of the property of the Board, or otherwise upon the Roads of the property of the contractor.

The Contractor will be required to find Stables.

The Board can be allowed to be performed by the Contractor, but the Contractor will be required to be performed to the satisfaction of the proper officers of the Board, and subject to the decision of a Surveyor appointed by the Board.

The Contractor will be required to be performed the remainder of the Work, or any part of the Work, to be done in the event of a new building for the West of England and South Wales District Bank, now invited to forward their Tenders to the undersigned, addressed to the Architects' Office, on or before THURSDAY, the 30th AUGUST, 1855, to which day the Tenders will remain open for inspection.

Each Tender must be delivered at the Town Clerk's Office, Guildhall, Kingston-upon-Hull, on or before the hour of TEN o'clock in the forenoon of the day of the Meeting of the Board, at which the same are proposed to be considered, viz., the first Tuesday in every month.

The Board will not be bound to accept the lowest or any Tender.

By order of the Board,

ROBERT WELLS,

Clerk to the said Local Board.

Guildhall, Kingston-upon-Hull, 24th August, 1855.

TO CONTRACTORS AND OTHERS.

THE ENFIELD LOCAL BOARD of HEALTH.—Notice that they are prepared to receive TENDERS for the WORKS and MATERIALS for the WATER SUPPLY and SEWERAGE of their district, as follows, viz.:—

CONTRACT No. 1.—For Cast-iron Water-pipes and other Castings.

CONTRACT No. 2.—For Sluice-cocks, Hydrants, or Fire-plugs.

CONTRACT No. 3.—For High pressure Steam engines, Pumps, &c.

CONTRACT No. 4.—For Erection of an Engine-house, Chimney-shaft, Reservoir, &c.

CONTRACT No. 5.—Making and completing a 12-in. Artesian Borehole, &c.

CONTRACT No. 6.—For constructing about 18 in. Brick Sewer, &c.

CONTRACT No. 7.—For Stoneware Drain and Sewer Pipes, &c.

CONTRACT No. 8.—For Laying the Cast-iron Water-pipes, Sewer-pipes, &c.

Either of the above specifications and conditions of contract may be obtained upon payment of £1 1s. (which sum will be returned on the receipt of a bona fide Tender) at the office of J. PILBROW, C.E. Tottenham (Engineer to the Board).

Each Tender is to be sent in sealed and marked, with the number of the Contract to which it refers, on or before the 10th day of SEPTEMBER next, addressed to the said Local Board of Health, Enfield, Middlesex.

By order of the Board,

JOHN SAWYER, Clerk.

Enfield, Aug. 22, 1855.

AFTER THURSDAY, 7th of SEPTEMBER, will be received at the Office TENDERS for the ERECTION of WORKS and PLANT, at Lower Tooting, Surrey, near the Railway Station, for making Portland Cement for a Company about to be formed. Plans and Specification to be seen on the 29th of SEPTEMBER, but the Tenders are to be delivered before that day.

TO BUILDERS, &c.

PARTIES desirous of TENDERING for the ERECTION of a FREE CHAPEL in Westbourne Park Road, for the Universal Investment and Building Company, are informed that drawings and specifications may be seen at the Offices of HENRY HARDEN, Solicitor, 1, Furnival's-inn, Holborn, on TUESDAY, SEPTEMBER 4, and SATURDAY, SEPTEMBER 8, between the hours of 10 and 4 o'clock, and that Tenders are to be delivered at the Offices on or before FIVE o'clock p.m. at 35 Lincoln's-inn-fields, addressed to me. N.B. The directors do not bind themselves to accept the lowest or any Tender.

(Signed) HENRY HARDEN, Secretary.

CONTRACTS.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING with the Watford Local Board of Health for the ERECTION of a NEW GAOL, COTTAGE, and a BOARD-ROOM, and other works, in pursuance of a Plan and Specification at the Office of Mr. HUMBERT, in Watford, the Surveyor to the said Board, are invited to send Tenders, addressed "Tender for Board-room, &c." (as the case may be), to be delivered at the Office in Watford aforesaid, on or before THURSDAY, the 27th SEPTEMBER; the Board does not bind itself to accept the lowest or any other Tender.

By order of the Board,

Watford, Aug. 25, 1855. JOHN SEDGWICK, Clerk.

NOTICE to BUILDERS and CONTRACTORS.—MILITARY DEPOT for the COUNTY of DENBIGH, at WREXHAM.—POSTPONEMENT of the WORKS.—In consequence of the passing of the Militia Law Amendment Act, 1854 (17 & 18 Vict. cap. 16), TENDERS WILL NOT BE REQUIRED for the intended Works at the Military Depôt, at Wrexham, until after the next GENERAL QUARTER SESSIONS, of which further Notice will be given.

THOMAS PENSON, Architect.

Oswestry, August 24th 1855.

Fenchurch-street. Tenders to be delivered on or before WEDNESDAY the 29th SEPTEMBER. The Company do not bind themselves to accept the lowest or any Tender.

Ironmongers' Hall, August 1855.

TO BUILDERS.

PERSONS desirous of giving TENDERS for the REPAIRS of PARTIAL REBUILDING of BRICKWORK and CARVED STONE-work, should call and inspect the drawings and specification by application to the Rev. W. HORSLEY, Cookham, on and after MONDAY next, SEPTEMBER 4th. The Architect does not bind himself to accept the lowest Tender.

CONTRACT for CAST-IRON PIPES.—The Local Board of Health for the Borough of Preston are prepared to receive PROPOSALS from persons willing to CONTRACT for about 200 TONS of CAST-IRON PIPES, of which 170 tons are 36 inches in diameter. The specification and form of Tender may be seen at the Office of the Engineer on and after MONDAY, the 21st inst. and parties residing at a distance intending to propose may be supplied with a copy of the specification, and form of Tender upon payment. The Tenders must be lodged by the 5th of SEPTEMBER, 1855.—Further information that may be required may be obtained from the Engineer

JOHN WRIGG,

Engineer to the Preston Board of Health.

Preston, 17th August 1855.

LEEDS SEWERS.—To BRICKLAYERS, MASONS, and GENERAL CONTRACTORS. The Council of the Borough of Leeds are prepared to receive TENDERS for PROPOSALS for the ENLARGING, BUILDING, and COMPLETING of several pieces in length of the principal BRANCH SEWERS, for the more effectual drainage of the district of Leeds, Hunslet and Holbeck. Plans and specifications may be seen and further information may be had, on and after THURSDAY, the 30th AUGUST, on application to Mr. J. W. LEATHER, Civil Engineer, Leeds, and a draft of the contract may be seen and further information may be had on application at the Town Clerk's Office. Tenders in answer to be delivered, sealed up as directed, to the Town Clerk's Office, on or before ELEVEN o'clock in the forenoon of FRIDAY, the 14th SEPTEMBER 1855. The Council do not pledge themselves to accept the lowest Tender. By order,

JOHN ARTHINGTON,

Town Clerk and Clerk of the Council.

Town Clerk's Office, Leeds 11th August, 1855.

SHREWSBURY GENERAL CEMETERY. EXTENSION of TIME for PLANS and LOANS. The TIME for sending in plans for the intended cemetery at Shrewsbury, has been EXTENDED to the 15th day of SEPTEMBER next. Parties willing to lend the £2,000 required are requested to state in writing the same and proposed to be that sum of interest required, to me, on or before the 15th day of SEPTEMBER next. It is proposed to pay off annually one-twentieth of the principal money borrowed.

J. J. PEELE, Clerk to the Burial Board.

Guildhall, Shrewsbury, 21st Aug. 1855.

TO BUILDERS.

NEW BANK at BRISTOL.—Parties desirous of submitting TENDERS with a view to CONTRACT for the whole or any part of the BRICKWORKS to be done in the erection of a new building for the West of England and South Wales District Bank, are invited to forward their names to the undersigned, addressed "Tender for Brickwork," on or before THURSDAY, the 30th of AUGUST, 1855, at which time the Tenders will be opened in the presence of Mr. J. WILLIAMS, Surveyor, of London, and a list sent to all parties so desiring and enclosing one guinea for the same, which will be returned to those from whom Tenders may be received.

WILLIAM BAUCE GINGELL, }
GOWLETT & KNIGHT, } Architects.

St. Werburgh's Chambers, Bristol; and
12, Parliament-street, London.

BOSTON BURIAL BOARD.—To BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of the TWO CHAPELS and ENTRANCE GATEWAY on the new burial ground for this parish, and for WORKS connected therewith, are invited to send in sealed Tenders, addressed "Tender for Burial-ground Chapels," on or before the 10th day of SEPTEMBER next, at the office of Mr. SIMPSON, Spalding, Boston, from that day until TUESDAY, the 18th of SEPTEMBER. Further information may be obtained on application at the Architects, Messrs. PRITCHETT and SON's Office. Tenders, sealed and endorsed "Burial Board Tender," are to be sent to me, before TWELVE o'clock on THURSDAY, the 13th of SEPTEMBER. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,

B. S. SIMPSON, Clerk.

Boston, Aug. 21, 1855.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Best Iron Hollow Bars for Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office, No. 7, Size-Lane, London.

THOMAS EDINGTON, late of the Phœnix Iron Works, Glasgow Iron Merchant, Contractor, Inspector of Railway Bars and Castings, Agent for Patents, commission Agent WANTED, Agencies for Trade, Sale, or Commission of Boilers, Boiler and Ship Plates, Angle and Rivet Iron, Tinned Plates, &c.—17, GORDON STREET, GLASGOW.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co., 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for cabinets, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting Spring hinges, and superior gate fastenings, all made gate prices below genuine unless marked "Charles Collinge, patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

IRON ROOFS, BRIDGES, HOUSES, and CAST-IRON WORK, of every description, supplied and manufactured by JOHN WALKER, Mill-wall, Poplar.

Offices, Arthur-street West, London-bridge, late 63, Gracechurch-street.

N.B. Builders and others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

THE PATENT GALVANIZED IRON TUBE AND CARE,

Owners of Crauford's Patents, and Successors to THE GALVANIZED IRON COMPANY.

Supply Patent Galvanized Sheets, plain or corrugated, for roofing &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering Hooping, &c. Wholesale, retail, and for export.

An allowance to the Trade.

GALVANIZING WORKS,

REGENT'S CANAL DOCK, LIMEHOUSE;

BROAD-STREET and PERKLEY-STREET, BIRMINGHAM;

LONDON OFFICE, 3, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING WORKS, BIRMINGHAM,

PORTER (BROTHERS) AND STUART

(LATE JOHN H. PORTER),

IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS)

JOHN SYMONDS AND CO.

WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

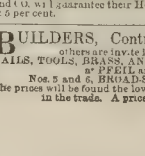
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.

Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-bason, Commercial road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated of all sizes and gauges. Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain water, Screwed Gas and Water pipes; Hooping, Castings, Fur sce-pans, Baths, Buckets, &c. wholesale retail and for export. Every description of Sheet-Ironwork Galvanized; Deck-spikes, nails, &c. kept ready galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbe Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

HEATING by HOT WATER. J. JONES, Iron Merchant, has always a great variety of CONICAL and RADIATING BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, dutch ovens and frames, furnace grates, sad irons for the same, hot-water pipes, elbows, bends, sinphons, throttle valves, pipe cocks, flange unions, elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No. 6, Bankside, London, near the Southwark-iron bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.



THE best and quickest drying of the wood, bricks, and houses, adopted by the BUILDERS' PATENT CALORIFIERE, exporting in the natural atmosphere 6 gallons of water without altering the best timber, injuring the quality of the most delicate colours, or the bricks, &c. &c. by the use without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wholesale premises are thereby rendered unnecessary. For the use of the above valuable stove it is in operation at West paving Company's Works, further; at Mr. Mackenzie's, Architect, of Kent-road; at Mr. Vosan's, next H.M. Royal Dockyard, Deptford, and several maltsters, millers, and manufactories in London and country. Apply per post to T. BULLEY, Engineer for French Floor Mills, Turbines, &c. 53, King William street, City.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; Improved Boilers, requiring no brickwork; WARMING Apparatus, &c. Apply to S. S. TAYLER, Baron-st., Battersea.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction in case of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the steward's department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and Co., (opening to the Monument), London-bridge. Established A.D. 1700.

NEW HOUSES of PARLIAMENT.—DEBRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths, from 15s.; which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEBRIES celebrated DRY GAS STOVES, upwards of 60,000 in use.—See testimonials at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

WARMING by HOT WATER.—J. WELLS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, would respectfully solicit the attention of architects, builders, &c. to their improved apparatus for warming churches, mansions, halls, lofts, and public buildings, &c. Having had a long and lofty church to warm in pipes, beg to call particular attention to the remarkable statement in the "Builder" of Jan. 14, 1854, which fully bears out the said address of the Rev. H. J. Bogg's, delivered at a meeting of the Architectural Society, wherein Mr. Bogg shows that having tried hot water in his church, and found it to be the most effective system applicable to warming large churches, another large

buildings. It is free from all objections, such as smoke, dust, &c. in working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs. J. and H. WELLS and Co. will guarantee their Hot Water Apparatus for three years, at 5 per cent.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEEL AND STEDALL'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

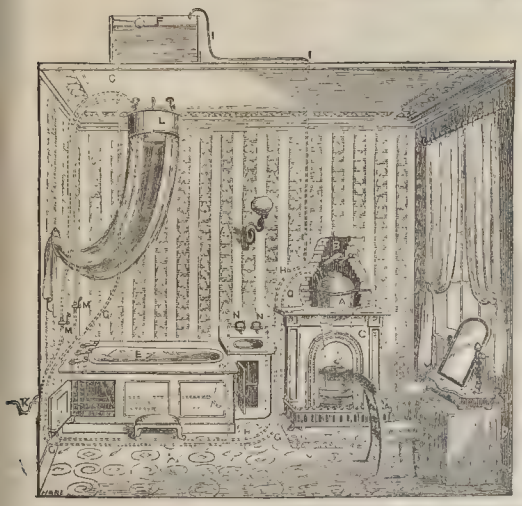
ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.



The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated orm.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of he draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1¼-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.

L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, and have levers fixed on them, engraved, "hot and cold shower."

A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept continually alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street,

Finsbury-square, respectfully invites the above Trade, to the inspection of his extensive stock of ironmongery, which cannot be surpassed in variety, quality, and cheap rates by any house in London.

Elliptic Stoves, 4s. to 4s. 7d. 8s. and 9d. per inch.

Hegister Stoves, 5s. 6d. to 7d. 8s. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

4s. 6d.	5s.	6d.	7s. 6d.	8s. 6d.	11s. per gross

And every material required in the building, bell-hanging, upholstery, and brass-founding trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

NEW PATENT MACHINE for

MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are respectfully requested to call at the Patentees, BOWES, JAMES, and Co.'s, 29, Whitefriars-street, Fleet-street, where this very simple, powerful, and expeditious machine, which is the only one yet brought out, will be seen at work, performing three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,

PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Defbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRON FOUNDRY, 80, Goswell-street (late of

Brick-lane, St. Luke's), J. J. JONES, having made great additions to his STOCK of PATTERNS, begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

NAILS and IRONMONGERY,

from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES.

A complete LIST of which will be forwarded upon application.

FREDERICK BLYTH,

Nail Manufacturer and General Factor,

Regent-parade, BIRMINGHAM;

or at 16, Gresham-street, LONDON.

CUT NAILS.

Established A.D. 1783.

1¼, 19s. 6d.; 1¼, 18s. 9d.; 2, 17s. 9d.; 2½, 17s.; 3, 16s. per cwt.

HAYWARD, BROTHERS, IRONMONGERS,

196, BLACKFRIARS-ROAD.

LIGHTNING CONDUCTORS.—

R. S. NEWALL and Co. Patentees of the Copper Rope Lightning Conductor, beg to inform the public, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing at one shilling the foot.

R. S. NEWALL and Co.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

149, Strand, London.

67, Hyde-park-street, Glasgow.

27, Dale-street, Manchester.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

ROPEMAKERS, IRON-FOUNDERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

TO BELL-HANGERS, GAS-FITTERS,

IRONMONGERS, &c. &c.—The Trade supplied on the best terms with Hose, Rods, Zinc, Tin-cast, Copper Wire, Gas Pendant, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Corrugated, Rings and Lacquered Case Tube for Picture Rods, Locks, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Founders and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

WIRE STRAND FENCING,

as furnished with all its fittings, by R. S. NEWALL and Co. having elicited the unqualified approval of personal men, is confidently recommended as the best fencing for park and farm enclosures, or divisions, for temporary or permanent purposes instead of any kind of hurdles, for roads side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co., after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

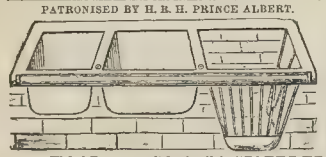
Brick Moulds kept in stock. Any size made to order.

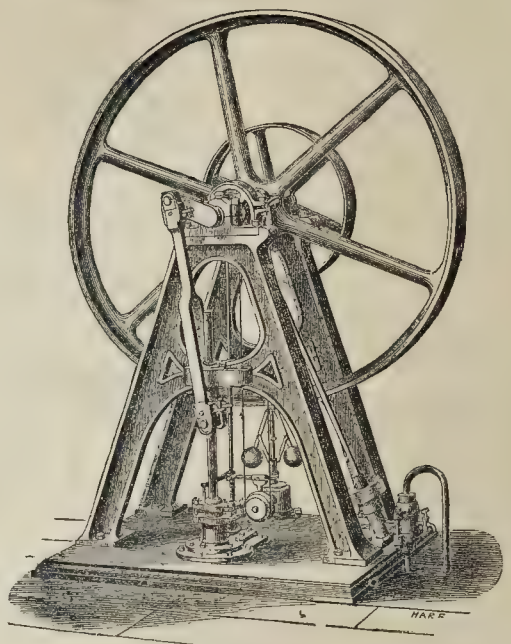
BARTON'S PATENT STABLE
FITTINGS and ENAMELLED MANGERS.



These Fittings have all the newest improvements, and are the only Patented invention of this description to be had. Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in Stock. Iron Hurdles, Gates, Fencing, &c. Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Cans. 170 of this principle on Buckingham Palace. Price 42s each. JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

COTTAM'S ENAMELLED MANGERS.—
These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show.
COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

PATRONISED BY H. R. H. PRINCE ALBERT.



S. HOOD and CO.'S REGISTERED
STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse, 81, Upper Thames-street.

A PRIZE MEDAL for SUPERIOR LOCKS
Was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; Chains, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

PARNELL'S PATENT DEFIANCE and
NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public from their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-staples and Striking Plates, Fire proof Safes, Deed and Cash Boxes, Copying and Lever Presses.—Descriptions and lists of prices may be had at the Depôt, 62, Strand, gratis.
STREET DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

FIRE-PROOF CONSTRUCTION.—
FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 19, York-buildings, Adelphi.

STEAM ENGINES.

THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND
HAVE AWARDED THEIR £10 PRIZE TO WILLIAM DRAY AND CO.
FOR THE BEST VERTICAL STEAM-ENGINE.
WILLIAM DRAY AND CO. ENGINEERS, &c. SWAN-LANE, UPPER THAMES-STREET, CITY.

DESTRUCTION of WAREHOUSES at
MANCHESTER, by FIRE.—Messrs. Ryland and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.
COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.
"24, High-street, Manchester, March 6th, 1854.
"Messrs. Chubb and Son,
"Gentlemen,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.
"You are at liberty to make what use of this communication you may think proper.
"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

HART AND SON,
52, 54, & 53, WYCH-STREET, and 91, DRURY-LANE.
Proprietors and Manufacturers of
PITT'S PATENT SPINDLED DOOR FURNITURE.

BELL-PULLS, HANDLES, LOCKS, BOLTS, HINGES, &c.
And 32, Hardware Department, Crystal Palace, Sydenham.

SMOKE CONSUMER.—The only perfect
CONSUMER (Davey's Patent), can now be had at prices lower than any other, the construction being extremely simple and strong. Can be fixed in any sized furnace, either iron or brick.—90, Kent-street, Borough.

BUILDERS, Carpenters, Cabinetmakers, and
others are invited to inspect the STOCK of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY, at the lowest possible prices, at NAYLOR'S late Bennett and Naylor) the Great Western Warehouse, 235, Oxford-street, between North Audley-street and Park-street.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.
IRONMONGERY WAREHOUSE,
established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

IMPROVED PATENT WIRE-ROPE.—
Mr. ANDREW SMITH, the original inventor of Wire-rope for Lightning Conductors, Bash Line, and other purposes, solicits attention to his improved manufacture as the best and cheapest, having obtained his sixth patent since 1835.—Office, 69, Princes-street, Leicester-square, London.

GEORGE and SAMUEL CUTLER,
WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London. Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus. (Gas works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

SAW-MILL MANUFACTORY, Chelsea,
London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

ARTESIAN WELLS.—Boring for Water,
Sinking Shafts, &c. SWISS DRAWING INSTRUMENTS, of real quality to the very best London made instruments, and considerably cheaper—Apply to Mr. S. BARLOW, 3, Featherstone Buildings, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Dudell place, Exchange, Manchester.

F. ROBARTS, WELL-BORER and SINKER, 3, Saint John-street-road, Clerkenwell. Tools on sale or hire. Work done on the most reasonable terms. All Wells made perfect by cleaning out or going deeper. Thirty years' experience.

LARCH POLES.—FOR SALE, a large quantity of very fine LARCH POLES. Likewise, a few tons of prime CHARCOAL, unburnt Apply to JOHN SNOW and Co Upper Railway Wharf, Bristol.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' closet basins, plug ditto, brass-work, &c. &c. sheet-lead, and patent pipe, plate, patent plate, sheet and cast zinc, whited-lead, oils, colours, &c. &c. PER CWT GIVEN for OLD LEAD. GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOMES FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters one, two, three, and four gallons each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. Reference to parties satisfactorily supplied with quantities up to 40,000 gallons per diem, may be obtained on application at the depôt, 71, Baker street, Portman square, London.

WRITING.—Every description of Writing, either on Boards or Glass, executed in a first-rate manner, on the most reasonable terms. ILLUMINATED WRITING in the antique style, &c., by D. G. HUSWELL, Writer to the Trade, 38, Grub-street, Soho.

WOOD ENGRAVINGS.—Illustrations for Books, Periodicals, Manufacturers' Catalogues, and every class of Wood Engraving, on the most reasonable prices, by GEORGE BORRINGTON, Designer and Engraver on Wood, 5, Ampton-street, Gray's-inn road.—Specimens and estimates post free.

IMPORTANT TO MECHANICS.

Just published, price 1s.

MENSURATION MADE EASY. A book written expressly for the working mechanic, by the simplicity of its arrangement, and clearness of explanation, the difficulties so long opposed to the mastery of this most interesting and necessary branch of knowledge, are removed. The instruction contained in this little work will be found practically useful in every transaction of business in which measurement either superficial or solid, is required, and every artizan, to whom the benefit of a superior education has not been extended, will profit by its perusal.

Sold by EFFINGHAM WILSON, Royal Exchange.

FREEHOLD LAND SOCIETIES.

Now ready, second edition, price 5s.

DRAFT RULES, for the Formation of LAND SOCIETIES, with Suggestions for the Enfranchisement and Improvement of Copyhold and Church Property. By ARTHUR SCRATCHLEY, M.A. F.R.A.S. Actuary to the Western Life Assurance Society, 3, Parliament-street, London.

CHARLES MITCHELL, Red Lion-court, Fleet street.

MR. MACAULAY'S ESSAYS (People's Edition). Now complete, in 2 vols. crown 8vo. price 4s. each, cloth; or in Seven Parts, price 1s. each.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

MORIOS WORK ON ART.

This day, neat boards with frontispiece, price 6s.

THE POETRY of CHRISTIAN ART. Translated from the French of A. F. RIO.

"This is a charming volume, containing a large fund of detail, chiefly on the early Christian painters, and their pictures. Every page is full of argument and interest." *The Builder.*

London: THOMAS BOSWORTH, 215, Regent-street.

TO LAND SOCIETIES.

In one vol. with upwards of forty plates, price 5s.; by post 5s. 6d. stamps

DESIGNS, SKETCHES, PLANS, and SPECIFICATIONS for SUBURBAN VILLAS and COTTAGES, with Estimates of cost.

By GEORGE JOHN RICHARDS, Surveyor, Author of "Remarks on the Purchase of Landed Property."

Now ready.

London: J. R. HALE, 6, Tavistock-row, Covent-garden; or by post, from the Author, Lincoln's-inn-fields-chambers.

NEW EDITION OF THE CRYSTAL PALACE OFFICIAL GUIDEBOOK.

By SAMUEL PHILLIPS.

A NEW EDITION, corrected and enlarged, with NEW PLANS of the BUILDING and GROUNDS, and many additional Plans of the various Courts, is published this day, price One Shilling.

*** The Official Guide-book to all the Courts are always on sale in the building, and at the railway stations.

BRADBURY and EVANS, 11, Bouverie street.

IMPORTANT TO MEMBERS OF FREEHOLD LAND SOCIETIES

Just Published, Part 1 of an entirely New and Original Work, entitled,

THE BUILDER'S PRACTICAL DIRECTOR, containing buildings for all classes, enabling every freeholder to be his own surveyor and builder; with plans, sections, and elevations, for the erection of cottages villas, farm buildings, dispensaries, public schools, &c., an improved system of drainage, illustrated. Also, detailed estimates, quantities, prices, adaptation of timber, &c., illustrated by numerous diagrams and steel engravings, by a practical architectural artist.

Edited by E. V. GARDNER, Esq. C.E. author of "Railway Measurator," "Builder Guide," &c. &c.

Assisted by J. GARDNER, Esq. and other eminent Architects and Surveyors.

In forty-eight parts, each containing four plates. To be completed in from twenty-five to thirty parts, at 1s. each.

Published for the proprietors by J. HAGGER (late W. Frenchl), 67, Paternoster-row, London.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. V. for April, just published.

GEO. ROUTLEDGE and Co. Farringdon-street; and R. SPENCER, 314, High Holborn.

KELLY'S PRACTICAL BUILDERS' PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen, founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s.; containing upwards of 220 Steel Plates, and numerous Wood-cut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mouldings, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and numerous Wood-cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with the Estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 39s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s or 30s boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture By H. W. and A. ARROWSMITH, House Decorators to her Majesty Ten Parts, 3s.; or in boards, 33s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining and Marbling; including the Origin and Theory of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 33s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture. By the British Empire Illustrated by upwards of 2,000 Wood Engravings. By JAMES HASWELL, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1839, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the insertion of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

The Builder.

SATURDAY, SEPTEMBER 2, 1854.

WE proceed to give a report of the lecture delivered by Professor Cockerell, at the Architectural Museum, Canon-row, Westminster, on the Distinctive Characteristics of Greek and Mediæval Sculpture as applied to Architecture. We may say that it was accompanied by the exhibition of a variety of illustrations in original drawings, prints, and photographs. The professor observed, that in accepting the invitation of his colleagues in the art which they were so materially magnifying by their growing collection, he did not wish to enlarge upon the plastic art *per se*, but on its relation to architecture only, as the essential handmaid to the *ars regina*, indispensable to her glory, the exposition of her especial use and purpose, the scale or *modulus* by which her magnitude was to be appreciated, and the effectual means of reconciling the inherent monotony of masonic structure and its rectilinear rigour, by its command of variety and harmony in curves and angles; and he should endeavour to illustrate these positions by a comparison of the productions of the mediæval and modern chisel with that of the Grecian and of the earlier schools, and by tracing some of those laws which appear to have regulated the most admired works of the ancients which have been preserved to our times.

He submitted his remarks with the more pleasure, because the cordial union of those two glorious arts had been in lamentable abeyance since their last admired co-operation was exhibited by George III. in Somerset House; and because our boasted collections of Grecian marbles were a reproach to us, unless we endeavoured to understand, and to apply their principles to our modern use and purposes.

However intimate the relation of the arts of architecture and sculpture, the properties and the characteristics of each need to be carefully distinguished.

Architecture, by its logical order, its geometrical symmetry, its mechanical energy, its magnitude and proportions, appeals at once to the intellectual faculty, and by scarcely traceable emotions, impresses the soul with the sublime; but it is by the aid of sculpture only that she can attain the beautiful, and reach the heart: thus tempering the severer conclusions of the understanding with the poetic and moral sympathies of our nature.

Sculpture is to architecture what the countenance and the gesture are to the human frame, imparting speech and expression to that which would otherwise be mute and cold, and warming it into life by its more familiar graces. The one addresses the mathematical faculties, the other the poetical; and the end and object of all our studies, the sublime and the beautiful, can only be obtained by the intimate union of the two.

Well, therefore, has Winckelman quoted from Aristotle (Rhetor. lib. 1, cap. 5), to the effect that "an edifice without the ornament of sculpture is like the individual who may be in perfect health and strength, but naked and in indigence; the felicity of man consisting in the possession of both these means for the full enjoyment of life." (Vol. III. c. 11.)

At once the most attractive and enduring of all the formative arts, sculpture is called in to dignify and to illustrate every operation of the architect, whether for delight or solemnity; in the adornment of the garden, the forum, public square, the monumental testimonial, the mausoleum, or the august temple: it animates the actual times with the presence of the illustrious past, and presents the most interesting symbols of religion, patriotism, and recreation, which it is in the power of the arts to supply.

The streets of the stoæ of Athens presented more statues than men; the illustrious dead were added to the living. The glory of the Altar of Olympia consisted in the memorial effigies of almost every renown that Greece had known. Looking at sculpture in its highest employment in national and religious works, in the temple or the cathedral, we find that the same general idea has exercised man's ingenuity with constancy, and more or less success, from the building of the Parthenon to that of the Parliament Houses, leaving to posterity a significant and glorious possession, and a national boast.

The architectural order is the framework and the vehicle for the expression by sculpture of religious acknowledgment to the immortal gods, to the heroic spirits which have illustrated the country, and to the exhibition of the pomp of power and the pride of life, which animated the people of the day. In the Temple of Minerva these subjects were represented in three kinds of sculpture, in the tympanum, the metopes, and the frieze round the cella, in one simultaneous view.

In the Christian cathedral the Faith was more especially to be magnified in its triumph over death, by the most awful and affecting representations. The Saviour and example of mankind was exhibited in the centre doorway, and above, the Resurrection and the Judgment,—the terrors and the joys of eternal life. "The glorious company of the apostles;" "the goodly fellowship of the prophets;" "the noble army of martyrs," surrounded the portals, and marshalled the devout towards the Hallelujahs of the Sanctuary. Above, in majestic order, God's vicegerents upon earth, the kings of the land, were ranged, each with the symbol of his respective merit, and presented to the praise or execration of the beholder,—prejudged already. The heavenly host of angels and archangels accompanied every part of the sacred edifice, presenting a whole so hallowed and unearthly, that the precincts were termed Parvis, or Paradise,—giving refuge and impunity even to the vilest criminal.

Such are the subjects of the cathedral fronts of Rheims, Amiens, Strasburg, and of our own country, especially at Wells, still in good preservation, in which more than 600 figures are employed for this purpose. But minor productions of this splendid and interesting art are in the thirty pieces of the angel choir at Lincoln, giving an epitome of the Advent of the Saviour; the 308 pieces in the ceiling of the cathedral at Norwich, giving the entire history of revelation; the Virtues and Vices, at Salisbury: all illustrate abundantly the instruction, the elevation, and the charm which this art communicates, "as books to the unlearned," and to the learned conveying suggestions of the most affecting kind, which the language of art alone can command: sometimes this is effected with an epigrammatic grace and precision, as at Lincoln, scarcely inferior to the classic mind; but too often mixed with the rude and doggerel notions of a superstitious craftsman, uninformed by academic discipline or enlightened criticism. But even in minor works the sculptor's hand is never absent from the sister art, and often the unknowing in the merits of architectural composition may be moved by the apt symbol and the touching suggestion which she alone can supply: as at New College, Oxford, where the pious Wykeham, over the portal, propitiates the Deity, in an attitude of the utmost humility, by the offering of his duty and his praise in his noble foundation,—or by the angel Raphael pointing to the house of prayer, in its entrance vestibule; or by the triumphant Michael vanquishing the evil one on the acroterian of the edifice.

But the vindication of this beautiful art in connection with architecture—the citation of examples of its necessary union,—was not so much the subject for the evening as the technical employment of sculpture by the architect in statues and groups, in high and low relief, and the considerations of the principles, the means, and the rules which regulated its practice in the best schools, and the comparison, in these respects, of the chief epochs of its production.

The supremacy of the Greeks in the theory and practice of the fine arts will ever be conceded, and in the grave and permanent art of sculpture especially: we can trace their philosophical conclusions from the discussions of Socrates with Parrhasius and Cleiton. (See Mem. lib. 3, c. 10.) Under such tuition we may understand how diligently the art was regulated by laws drawn from nature and sound criticisms; how well the limits and the faculties of each of the sister arts were defined and kept within their proper domain, with that fullness in the result which every cultivated judgment is ready to admit without controversy. The first consideration of this art was how far it was calculated to enhance the architecture to which it was applied, by the adjustment and co-operation of its lines so that each of these arts in harmonising combination should find increased effect by their juxtaposition.

The sculptor and the architect labouring in perfect concert, contrasting attitudes in various angles with the rectilinear order of the building, and opposing floating and more mellow forms to its acute and rigid features; tempering the absolute symmetry and uniformity of the latter by symmetry of quantities in the sculpture, without impairing the energy or breadth, essential to the effect of the *ars regina*, and the ultimate effect of the whole,—in accomplishing these objects, it will be evident that the plain surfaces should never be lost sight of, not only as sustaining the architecturic character, but as heightening the value of the ornaments; and no principle is more striking in Greek examples than the reserve in this particular, and the great attention apparent in the due adjustment of quantities to each; so that the eye might receive the full enjoyment of that alternate excitement and repose which this system was calculated to produce. In the Gothic, on the contrary, the idea of art was inseparable from ornamentation, and the plain surface was regarded as a defect in composition; thus in the mediæval works above cited not a foot of space is free from elaboration: the figures are crowded upon each other, often in a mob, without regard to the harmony of their respective attitudes or the claims of the sister art; they are commonly as vertical in their attitudes as the columns which they ought to have relieved by their varying lines; confined in narrow niches without elbow-room, or caged within the columns of the buttresses, as in the flank of Rheims and some of our own cathedrals, obscured by shade, and giving no relief to the architecture by their opposing profiles.

The diagrams (exhibited by the professor) displayed some of those considerations to which the architect refers with the chief interest, for however the form and plastic expression are the ordinary subjects of admiration, with him they must be ever secondary to the effect which their lines and dimensions produce upon his structure.

In the western pediment of the Parthenon, which was seen from a great distance, we are struck with the central groups crossing each other, in the form of St. Andrew's Cross, and the same principle of diagonal lines is remarkable throughout the composition of the subordinates, and not less in those of the metopes.

This illustrates our first position: the variety communicated by their diagonals, as contrasted with the rigour of the perpendicular and horizontal tendency of the architectural lines. The architect, having no such contrast in his structural power (save in his pedimental lines, the ever-praised and admired gable), rejoices in these lines, and delights in giving an express and remarkable title to that feature of his work, as it is capable of illustrating this principle, namely, the frieze which the Greeks termed the *zophorus*, by its etymology, the life-bearing member; and most aptly is this title given as communicating all that vivacity and variety which the sister art can desire.

In the Phygalean frieze, the same composition of lines occurs for ever, but especially in plate 18 (Marbles of the B. Mus. Part III.), in which Theseus combats the Amazonian queen; the central piece of the southern frieze; again in the figure of St. Andrew's Cross; and it is delightful to trace in the same period, and by the self-same architect, the reproduction of this principle.

In mediæval, and hardly less in modern friezes, this great principle is entirely overlooked, in the larger as well as in the smaller, in statues as in reliefs; all are in vertical attitudes, like the vertical pillars and features of the architecture, and at right angles with the successive friezes, parallel with the horizontal lines of the building (see Rheims, Strasbourg, Wells, &c.), as if quite insensible to the power of effect which the Greek practice was calculated to convey.

But another important advantage of these diagonals is, that it admits a larger and more consequential figure than if it were upright, without embarrassment; thus a frieze of 4 feet high only, as in the Parthenon, receives a figure of 4 feet 6 inches by this diagonal contrivance of the attitude; this artifice is remarkable in the Phygalean, where the frieze, 2 feet 1 inch, receives a figure 2 feet 5 inches, the Halicarnassian, and especially in the Nereids and the Daughters of Niobe in the Museum Clementinum (see D'Agincourt, vol. 4, pl. 1, figs. 30 and 32), where one-third greater height is given to the figures: in pl. 11 the direct contrary is seen in fig. 7, in the arch of Septimus Severus, where the attitudes are all vertical, and thenceforward the loss of the principle may be observed in all succeeding works, marking the decline of the art.

What has been already said of the linear imposition of groups applies equally to high relief and low relief, especially the diagonals; but in these more particularly we have to remark the essential adherence of the Greeks to the truth and beauty of that great principle, profile, as the best vehicle of form and expression at a distance, and as the absolute condition of art applied to a flat surface, in which foreshortening and perspective are incongruities and beyond the powers of relief from a flat surface; in these the tendency of lines and the balance of quantities, of figured and of plain surface, are the main consideration, the latter the repose, and the quantity of that repose, being no less important to the effect of the architecture than the figure itself.

In high relief, where the sun's rays necessarily enrich and affect the surrounding composition, its chiaroscuro, as proportioned to that of the entablature and the columns, and the disposition of the limbs, so as not to subdivide and impair its breadth, by shadows cast in the wrong place, is of the utmost consequence; and it has been well observed that the metopes of the Parthenon (which Plutarch assures as were the object of the highest admiration 600 years after their completion) were so well contrived in this respect, that the light for which they were calculated being reversed, would deprive them of half their effect.

In the practice, and no less in the criticism, of these works, the situation for which they were designed is always to be taken carefully into the account, as explaining the seeming anomalies which optical effects have rendered necessary. The Halicarnassian frieze, and that of the Choragic monument, exhibit the figures always isolated, because, calculated to be seen at a distance, their profiles might be confused. In the Phygalean, and in the cella frieze of the Parthenon, the figures are more crowded, because near enough to the eye to be easily distinguished, and no confusion could arise from their composite position. The heads of figures at a distance and in heights, are often large, especially in the frieze—the lower members short, the body long. In statues the shoulders are high, and the neck short. All these seeming faults are to be attributed to the optical considerations of the artist, and are at once reconciled by restoring them to their original position, and the angle at which they were calculated to be seen.

In the famous competition of Phidias and Alcamenes for the Minerva Promachos of Athens, the finished performance of the latter carried all the votes; but when Phidias claimed the right of placing his work in the proper distance and point of view, before the decision was concluded, every one was convinced of the necessity of those optical expedients which the great artist had provided for its proper effect. Low relief is especially valuable where the profile of the building is to be carefully maintained, as in Trajan's column and in the Portland or Borghesi vase. This kind of relief is most precious also in shade. Sir C. Eastlake well observes, "As projection commands shade, so flatness commands light; the flattest relief, therefore (as the cella frieze of the Parthenon), is best calculated for an invariably dark situation."

The rule of the Greeks, which forbids attempts beyond the nature and faculty of the specific art, is singularly infringed in the mediæval and revival schools by the introduction of perspective into bas-relief from Giotto to Flaxman, who was the first to recognise the aim of the Greeks in profile composition, and to restore the characteristics of their truer style of art.

In the gates of the Baptistery and in the schools of Venice by the Lombardi, and in the reliefs even of Michelangelo, we have specimens of this spurious style of sculpture, in the introduction of scenery, architecture, and landscape, foreshortening, and perspective, making the sculpture an imitation of a picture, and the two arts, the sculpturesque and picturesque, are confounded, with the greatest prejudice to both, because the characteristic profile is adulterated and confused, and the perspective is totally ineffectual.

The next consideration we have to offer is as to the scale of the figure with reference to the architecture,—one of the most important regulations of the ancients; so that the building should suffer no diminution of its magnitude, nor the group and figures their dignity and appropriate effect.

The human figure must ever be the *modulus* and rule by which we estimate the apparent dimension of every surrounding object. Whether the image is in the dimension of a giant or of a doll, it is always the human figure, varying from 5 to 6 feet, and imposes a criterion of dimensions to all that surrounds it; thus the Egyptian Pharoah, 60 feet in height (the great man signified by a great figure, seated in the court of his temple-palace), defeated the work of the architect, rendering it insignificant in the comparison. Bulk may be a convenient escape from the labour of expression and of thought, but it ever betrays decline of art. The Colossus of Nero and that of Domitian, in Rome, are signal examples of this disregard to the laws regulating the associated arts in which the Greeks insisted; and we must admit it as a bad symptom of our actual times. Artists of merit have fallen into this deplorable error. Thorwaldsen has sacrificed the palace at Stutgard to his ambition in his statue of Schiller; the French sculptor, in the decoration of the Bridge of Louis XV. with the marshals of France in enormous scale, has fallen into this abuse, but was quickly so sensible of the disproportion, that the marshals were removed thence to Versailles, where, surrounding the vast space called Place d'Armes, they still dwarf that mighty palace. Nor are our own sculptors exempt from this vice in nearly every modern instance, both in interior and exterior statues of our great men. To the architect this practice is most obnoxious, and ought to be visited with public reprobation. Cubical contents offer no apology for want of art. Extra human dimensions would add nothing to the effect of Charles I. at Charing-cross, Queen Anne at St. Paul's, or the best portrait statues of modern or ancient renown. Whenever the portrait statues at Olympia exceeded life-size, Pausanius takes care to mention it.

The Colossus of Rhodes, or the bronze colossus of Minerva Promachos, in the Acropolis at Athens, were to be estimated on other considerations, namely, as land-marks, calculated to the distant view of a maritime community, in connection with the surrounding hills or the ocean ships, and with reference to the landscape.

We may approve also that the Greeks in the interior of their temples should exaggerate relative dimensions, when the art was employed to do honour to the immortal gods, as at Olympia and at Athens: the ivory and gold statues, 34 feet to 45 feet high, occupied the entire nave of the temple, and the religious purpose and the homage to the Deity was the accepted apology for the practice; nor can the effect be doubted, for we are told that Paulus Æmilius, the Roman conqueror, rude though he was, so sensibly felt the sublime of the Jupiter of Phidias, that, for the first time, he burst into a flood of tears.

While the classics exhibited the propensity to exalt the human form at the expense of the architecture, the Mediævals, on the contrary, magnified the architecture at the expense of the human figure, by the exeguity of the image. As they employed it, they conveyed immensity to the temple: this system is most remarkable in the sculpture of the fifteenth and sixteenth centuries. The human creature then lost much of its dignity, and all the surrounding features were rendered proportionally trivial and crowded with grotesque and curious ornamentation, in order to relieve this inherent evil by necessary contrasts, and thus a fragile and toyish aspect is often the consequence, and the idea of duration, the first attribute of monumental architecture, is entirely lost sight of.

In their general practice, the Greeks studied to avoid either of these extremes, and therefore circumscribed dimension and number. The number of figures in the frontispiece, so far as we can trace them, varied with the number of columns employed, apparently five to seven in the tetrastyle, nine to thirteen in the hexastyle, seventeen to twenty-five in the octastyle or the decastyle.

Number was a material consideration with the Greeks both in architecture and sculpture: satiety was avoided; multitude was not to degenerate into prodigality; the figures of the frontispiece, in unmeasured number, might become a mob, and might lose their respective interest and emphasis,—a certain reserve established the mean between scantiness and redundancy. The flank or front of a temple might be monotonous and tedious if the columns were unlimited in number: multitude is to be restrained by certain rules, and artificial infinite, the invention of Burke, may become a romantic exaggeration in idea, and a fatiguing repetition in execution. So in the freize we remark that when continuous, as in the Phygalean, there have been certain periods established for rest to the eye; as, in the art of writing, the colon, semicolon, and full stop are used for the emphasis and intelligence of the subject-matter of the composition.

A third important principle which we have to remark upon is gradation.

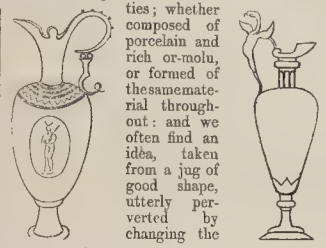
No figure in these compositions ever vied with the column in bulk nor was suffered to overlay the strength and solidity of the entablature; neither were these suffered to lose in that ideal magnitude which might be appropriated to their position. To accomplish the last desideratum, the golden rule so much employed by the architect in every composition, from a front to a ceiling or a shawl, the use of similars in dissimilar magnitude was universally observed in the kindred art of sculpture also. Just as Ictinus, in his columnar gradation of the Propylea; Palladio in all his works, as well as most of the classical and revival architects, and the Goths no less in their arcuated gradation took care to interweave in their compositions the degrees of comparison, so did the sculptor for the ends of magnitude and fulness of his subject; and wherever real dimension is attained in architecture or sculp-

ture great is the loss of effect in neglecting this means also of artificial dimension: all dimension being estimated by comparison, the relative size of the figures in the metopes communicated at once a dignity to the figures of the Tympanum, which fulfilled every desideratum of magnitude, and at the same time, richness and magnificence.

The relation of the major to the minor sculpture was also carried out so far as the spaces admitted. The architecturic relation establishes two-thirds or three-fourths to the minor order, none less than one-half; so in sculpture, the minor figures will be found to approach this last proportion, so far as the metopes admit; and in the example of the Parthenon this comparison is carried still further by figures which adorned the cella, and which still further contracted the spectrum of the eye and prepared it more completely to appreciate the dignity of the larger sculpture, offering thus three degrees of comparison in a simultaneous view. The frieze in the Doric was favourable in this respect, being one-tenth of the whole height, while those of the Ionic are one-twelfth, and the Corinthian one-fifteenth.

This artifice is sometimes well employed in statues also. Drake of Berlin in his pedestal of the statue of the late King of Prussia, has admirably employed this principle; and Rauch in that of Frederick the Great has done so in the highest degree, and has pushed the system of gradation to its utmost extent.

In the mediæval style grouping is rarely used, and never with an adequate understanding of the rules of composition. The chief object was to assemble the crowd of witnesses spread over an extended surface, and quite beyond the angle of vision which could embrace a whole. The configuration of the sister art, the architecture, is encumbered and obscured by the prodigality of carving, and the energy of the architecturic character is impaired by the grotesque elaboration of every feature (see Rheims, Amiens, and others). There was, therefore, no gradation, no reserve, as to principal and subordinate expression, no centre to the picture, and though smaller sculpture in high and low relief is constantly employed, it is commonly so relatively small, that comparison and gradation are out of question, the smaller being one quarter less than the larger.

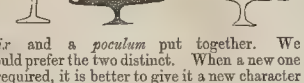


We have thus suggested some of the principles in which the union of sculpture with architecture has been considered in classic and mediæval times, and the sources of that sound criticism so necessary to success in those attempts; and let it not be said that this is a dillettante and obsolete question, foreign to our religion and habits of this country, for it is neither so with our Government, which encourages fine art by vast museums and expensive collection of Greek art, in order plainly to make these practical and useful, nor with the true Anglican church, which from Archbishop Cranmer to Archbishop Tennison (see Dr. Wilson's Ornaments of Churches Considered) has repeatedly approved. The fine arts of sculpture and painting are still the handmaids of religion, when properly employed, no less in the Reformed than in the Roman Church. These doctrines of our church have their full exposition in the building of St. Paul's, the first Protestant cathedral erected since the Reformation, in a learned age, and by a most accomplished architect of the time, and very largely decorated with sculpture. Here we have the twelve Apostles, the Evangelists, the Baptist, and Paul, finely disposed on the summit; the seven acts of Paul round the portal, and the rights of the Church above, with abundance of symbols in every part. This fine example has been repudiated for 100 years by the degrading and "impious rage of the Puritanical faction," but we have now a renewed health in these opinions, and we may confidently hope that having supplied the absolute necessities of the Church by new barns and tents for our holy worship, we shall, with our increasing wealth, and may we not say with our increasing piety, expand into beauty and magnificence, after the example of those great commercial republics in whose wake we follow with so great prosperity, and as they have ever done, offer our homage to the Giver of all good by every act of science, and add to the worship in spirit and in truth also the worship in the beauty of holiness.

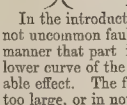
ON THE PRESENT STATE OF TASTE IN ORNAMENTAL DESIGN.*

Meretricious ornament, combined with richness of material, is one of the greatest enemies to good taste, because it may captivate by its pretensions; and even appear to assert a right to admiration, from the doubtful merit of being

in the saloons of the great. Many, therefore, of the worst forms in Sèvres china pass for beautiful, when they should be condemned as deformities; whether composed of porcelain and rich or-molu, or formed of the same material throughout: and we often find an idea, taken from a jug of good shape, utterly perverted by changing the

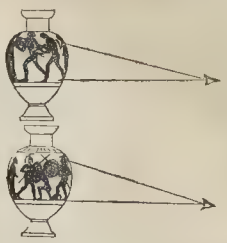


proportion, breaking up the outline of the lip and handle, or by other capricious alterations.



Ignorance of proportion frequently spoils the most graceful vase, even when copied from the antique; some crude notion about "flowing lines" being invoked as a substitute for real taste; and thus the light form of a cylix is often made clumsy in order to accord with an ill-understood theory of excellence. The chances, too, are that the handles are omitted, lest they should interfere with the favourite curve.

That lines should "flow" is perfectly true; but this is not a condition to be adopted everywhere without reason, or without considering the mode of suiting it to each particular case; and it must be understood before it can be properly applied. In tracery on the walls of a room it is of great importance; as in papers, carpets, and other decorative fittings; where spots, and single salient objects that catch the eye, are specially to be avoided; and the rule is good in many other cases, provided it be not abused.



When a vase is borrowed from two of different forms, it seldom combines the qualities of those it springs from, and is faulty in principle. The appearance of a union of two is unpleasing, and some cups are even met with in Greek fictile ware which have too much the character of a

cylix and a *poculum* put together. We should prefer the two distinct. When a new one is required, it is better to give it a new character of its own than to compound it from different elements. And thus the *Cantharus* and the *Carchesion* having handles which are suited to them, and in proportion to their size, do not give the impression of being indebted to a smaller cup for little useless accessories.

In the introduction of figures upon vases a not uncommon fault is to place them in such a manner that part is concealed by the upper or lower curve of the surface, which has a disagreeable effect. The fault is in making the figures too large, or in not confining them to the most level part. Thus, the eye, taking in only a portion, sees them without heads, or in a distorted position, when, by extending the border lower down the upper part, and diminishing the size of the figures, they would appear entire upon the proper field. The same applies to

figures on the inner or outer surface of a cylix,

where they should only occupy the flat part of the centre, and leave a space between them and the rim on the outside, instead of following its curve with their distorted heads.

The mixture of natural and conventional objects in the same design is another grievous fault; as in encaustic tiles, where a pattern is disfigured by combining with it the imitation of roses or other flowers; and a still greater abuse has introduced in tiles, paper, and printed stuffs, not only flowers, but the very square stitches of Berlin worsted work, even with their staircase outlines.

In designs intended to cover floors or walls, where a large surface is to be at once presented to the eye, several other conditions are to be attended to; and what may look well in one place may become offensive in another. Thus the size of patterns must depend on the dimensions of the place where they are to be introduced; and a large pattern in a small chamber takes off from its size and makes it appear still smaller. Lines again are poor and monotonous, if repeated over an extensive surface; striped curtains can only find an excuse when intended to give height to a low room; cross lines and spots are offensive and fatigue the eye, and the imitation of architecture on a floor offends the sight as well as common sense. Above all, the ornamental decorations of every space should be so devised as to appear a complete design made for that very purpose, and not a fragment forced to fit it, as in our carpets and wall-papers,—where the pattern, being cut through the middle, looks as if the rest passed under the wall to the next room. The difficulty is easily overcome by having a border so adapted to it as to correspond with the pattern along the whole outer edge, and to complete the design. Nor should a papered wall be covered over with Gothic tracery, parts of buildings, or battles; and a *Chasse de Fontainebleau*, or similar scenes, as on a French wall, are equally vulgar and tasteless. The same may be said of animals, ships, buildings, or landscapes, on drapery and furniture, or on trays, and similar articles of use; and the mixtures of designs, as flowers, with scroll-work, or with architectural details, offend against true principles of taste, and are rendered still more monstrous when the flowers are above life-size.

A double motive, indeed, is rarely tolerable, and in most cases is highly offensive, both in ornamental designs and in architecture.

In this last, for instance, nothing can be more inconsistent than a part of one building mounted on another to make up a new design. The choragic monument of Lysicrates perched on a small temple, to form the steeple of a church, is one of many instances of this incongruous compound; giving the impression that

† See page 448, *ante*.

the architect was too idle to invent a design of his own; and a spire set round with a small Greek colonnade, looking as if it represented a gigantic extinguisher slipped down into the cella of a round peripteral temple, might have been thought an impossible caprice, if it were not before our eyes on a London steeple. But the climax of bad taste (which holds us up to the ridicule of all Europe) is the Wellington statue on the arch at Hyde-park-corner, which it has turned into a pedestal, while, by its colossal size, it has outraged the proportions of the arch it spoils, as well as of every surrounding object. The horse, too, stands *across* it, in defiance of reason, and all received custom of design.

Many a graceful object is spoilt by some incongruous addition; sometimes, indeed, with the plea of use, but still not excusing itself for interrupting the harmony of an outline; and it may be questioned if the windows at the sides of a spire need obtrude themselves so far as to interfere with the line of its slope (fig. 1). The addition of a weathercock to the summit, spoiling

FIG. 1.

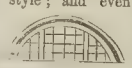
FIG. 2.

FIG. 4.

the beauty of its point, is also a mistake; which, however, is far outdone by the rays and other monstrosities on the apex of every Egyptian obelisk at Rome, that so effectually disfigure the very part most essential to the beauty of those monuments. Many of our spires, again, sin, like our modern obelisks (fig. 2), in their ill-proportioned obtuse points (fig. 3); others are far too thin and *painfully* sharp; while some broach spires, elongated beyond all reason, appear as if they had been drawn upwards (fig. 4) when in a plastic state; the operation condemning the triangular splay at the base to the same lanky character, and depriving it of the appearance of solidity and use.

FIG. 3.

Indeed, we are not singular in this misunderstanding of a spire; and Belgians, Germans, and others, delight in producing an effect upon it not unlike that of an *aphis* on plants, by afflicting it with a goitre-looking excrescence of hideous shape, at once at variance with proportion and form.



To notice all the inconsistencies of architectural whims would extend my remarks beyond their proposed limits; but I cannot omit to mention some of those still perpetrated in our houses; among which are the story placed above the cornice, that should properly crown the building; and the half-columns, or pilasters, fixed against the walls, with the idea of their ornamenting what in reality they deface. Nor have these the excuse of performing the office of columns,—which is to support something: they seem to be merely glued against the walls for no purpose; while the windows, in two tiers on each side, look like picture-frames hanging between them. On the other hand, the propriety of dividing the stories by string courses is obvious; and it is consistent with reason and good taste, instead of being a mere introduction of ornament without the inquiry whether it is suitable or not.

The folly, too, of making ill-proportioned holes in the walls, called windows, of such immoderate size, that they leave no adequate spaces either between or above them, strikes every one who contemplates the generally monotonous character of our town houses, if his perception has not been deadened by the habit of seeing what is bad; and the custom of leaving the windows without any dressing gives them an appearance of barrenness and poverty. Again, it is inconsistent to cut up the whole wall by these large rectangular holes, in order to admit light, and then do all that is possible to exclude the same light by monstrous dust-catching hangings. Still more must we condemn a whole front so grooved with mouldings, surrounding the thick-set windows, that it looks as if solely composed of their framework; and above all the modern florid-confectioner style of building, that displays a superabundance of meretricious decoration, dotted over every part to the tops of the chimneys, as in some of our new streets.

The uniformity required in street architecture has very properly induced us to exchange the picturesque old gable ends for a regular series of buildings, which, when not offensive in point of style, and not all painted at different times (through the stupid and perverse propensity of some "free-born Briton" to do as he likes and differ from his neighbour), are an improvement on the irregular fronts of olden time. But when a country house is made in a similar rectangular form, the case is totally different; for the solitary mansion, depending solely on itself for all the architectural features of the mass, requires another treatment: it no longer forms part of a pile of buildings, where nothing but its front was bound to display any marked architectural expression; it is now expected, when alone, to fulfil all the various conditions of a whole, and must adapt itself to the requirements of its position.

In a northern latitude like this, where the sun is generally very low, less effect can be obtained by vertical than by lateral shadows. A house with a plain surface, therefore, when standing alone, appears bald and poor; and the richest cornice (a rarity in England) will seldom give its due effect of shadow. The projections of the so-called Elizabethan style,—where the wings, and the centre of the façade, the large stacks of chimneys, and other members, stand out from the dead surface and throw deep lateral shadows,—are consequently far better suited for country mansions; and this is one of many proofs of the propriety of consulting adaptability in all matters connected with taste. Care must, however, be taken not to sacrifice utility to a mere desire for ornament: for such is too often the case even in those very Elizabethan houses which have so many claims on our admiration; and a parapet wall is often added, which has the injurious effect of confining the snow between it and the roof, not only requiring men to be sent up to clear it off, but too often making the house damp and leaky.

There is frequently the same inconsistent mixture in architecture as in decorative design; and we are often offended by a Cinque-cento screen introduced into a cathedral of the Early Pointed or the Decorated style; and even by numerous anomalies in buildings begun and finished at the same period. The mean character and affected simplicity of the riding-school, and of the undecorated meeting-house windows, have likewise found favour among some architects; as well as broken pediments, sometimes with round in lieu of triangular summits: copied from works of decadent taste. The centre of a pediment thrust up as if by subterraneous agency, and leaving its two wondering ends far below it, has also been tolerated, perhaps admired; but although this last may have the sanction of Lombard architecture, and some of Palladio's churches, it is only the result of a want of invention, decomposing what was beautiful without the excuse of a graceful reproduction of what was good, under a new form.

Other builders, again, have gone into the opposite extreme, and as if conscious of their inability to remodel or invent, have been satisfied to copy what the eye saw without the help of the understanding; and (like the Chinese tailor imitating the patch in the dress made after a European suit) have thought they were faithfully reproducing classical architecture, when they set up the unfluted, rusticated, and other unfinished columns, which are used in so many modern edifices. These and similar errors are not confined to England; they were owing to a Roman corrupt style having been studied, and followed the period of the *Renaissance*,* and are therefore common to all who imitated it; but now that the principles and beauty of Greek taste have become known to us they are no longer excusable. To mention, however, all the vagaries and anomalies that deserve censure would be an endless task; and it is satisfactory to find that, *when no jobbing is permitted*, and no *responsible committees* blunder upon a decision, there is no want of talent in our modern architects; and it will be well when all other branches of taste are cultivated in these days with the same success as architecture.

GARDNER WILKINSON.

MONUMENT TO HOOD, KENSAL-GREEN CEMETERY.

THE monument which has been erected at Kensal green to the admirable poet and humourist, Thomas Hood, must be considered satisfactory. It consists of a bronze bust of the poet, heroic size, on a granite pedestal, inscribed, "He Sang the Song of the Shirt." The bust stands on two books, and on each side of the pedestal is a bas-relief in bronze, illustrating respectively "Eugene Aram" and that most touching poem, "The Bridge of Sighs." Against the face of the pedestal, at the foot, are a mask and lyre, in bronze; and these, as forming an ugly spot, we would remove. Although not large, there is a greatness about the monument which reflects credit upon the sculptor, Mr. Noble. It is not very great praise to say it is the best thing in the place. What a *rendezvous* of dreary inanities it is! There are not half a dozen of the "monuments" that you would care to look at twice: you may wander for an hour and not find a bit of art to give you pleasure or a thought: while the great mass of them are repulsively ugly. Some show excellent work and a lavish expenditure, which, under good direction, should have produced "a joy for ever," but here are all wasted. Look, for example, at the large polished red and grey granite monument in memory of the wife of Mr. Combe: one could scarcely fear to find anywhere a more elaborate piece of ugliness, and yet how excellent the work is. What could have possessed the Society of *Arts*, too, when they put up the spoilt lump of stone in memory of their faithful housekeeper for forty-two years, Miss A. B. Cocking, with the frightful "A. B. C." on the edge of it? It is embodied gracelessness intensified. Amidst the dearth of thought, the monument to General Sir William Casement attracts a second examination, for the expression in the faces of the four Indian bearers, who carry on their heads, in Caryatidian fashion, the flat canopy which protects the sarcophagus and military emblems. The Royal tombs are not without dignity; but we return to the opinion that the new memorial of Hood is the best thing there.

Poor Hood! He has left us some things which the world "will not willingly let die." Those who regard him merely as a humourist—and there are still many who do so—should read the two poems we have mentioned, and his "Ode to Melancholy,"—an exquisite work:—

> "All things are touched with melancholy,
> Born of the secret soul's mistrust,
> To feel her fair, ethereal wings
> Weighed down with vile degraded dust:
> Even the bright extremes of joy
> Bring in conclusions of disgust,
> Like the sweet blossoms of the May,
> Whose fragrance ends in must."

* Or *Cinque-cento* style, distinct from what should be called the *Revival* in Italy, which belongs to an earlier period.

PROVINCIAL NEWS.

Yarmouth.—A special meeting of the local commissioners was held on Wednesday in last week, to consider the report of Messrs. Walker and Burges on the plans proposed by Captain Smyth, R.N., for deepening Breydon and Burgh Flats. The estimated cost of these plans, according to Captain Smyth, was about 12,000*l.*, but the engineers (who approved them as a whole) raised the estimated sum to 16,000*l.* The report and plans were unanimously adopted, and the carrying of them out was resolved upon, subject to a report from a committee of ways and means. The clerk reported that about 4,000*l.* had been recently obtained on loan on account of the new bridge; also, that the resident engineer had expressed an opinion that now the new machinery for raising the bridge was down, the whole might be finished in about four or five weeks.

Portsmouth.—Plans for a new dock, 600 feet in length, are ordered to be immediately prepared by the engineer department of the Admiralty, the Board having resolved to construct a dock to communicate from the harbour to the steam basin dock now in use. From the position chosen, it is said this addition is only wanted to make Portsmouth dockyard the most complete in dock accommodation of any of her Majesty's naval establishments.

Newport.—The foundation stone of the new church of St. Thomas was laid by H.R.H. the Prince Consort, on Thursday, in last week, which seems to have been regarded as a general holiday for the occasion at Newport. The town was decorated with triumphal arches and flags innumerable, and the Freemasons of the Isle of Wight walked in procession. Mr. Daukes, the architect, was also present, with the plans of the building.

Banbury.—The workmen employed in rearing the new gas works have commenced fixing the roofs over the retort house and coal store, and the large brick tank, which is 55 feet in diameter by 20 feet deep, is being executed with rapidity: the gas-holder will be commenced on 1st September.

Wolverhampton.—St. John's Church, which has for some time past been in a defective state, is to be repaired. The report of Messrs. Bidlake and Lovatt, architects, having been adopted, those portions requiring immediate attention will be commenced forthwith: the other restorations will be carried into effect during the next year.

Upton.—The new bridge is at length completed, and the keys of the opening arch formally handed over to the Severn Commissioners.

Northwich.—A spacious chapel is now being erected in Witton-street, Northwich, for the use of the "Association Methodists."

Llanurig.—The new bridge over the Wye is completed, as well as the road leading to it. The work has been executed by Messrs. E. Jones and D. Davies, under the plans and specifications of Mr. Thomas Penson, county surveyor.

Conway.—Owing to the dearth of foreign timber, which has for some time prevailed in this town and neighbourhood, most of the carpenters, sawyers, and other artisans dependent on the trade, have been out of employ. The arrival from Quebec of a load of timber, however, has led to the resumption of labour by each class of workmen.

Bangor.—"The prospects of shareholders in the Bangor water-works," says the *Chester Chronicle*, "are becoming daily more unpromising. Notwithstanding the thousands upon thousands of pounds that have been expended, the concern seems yet merely in its honeymoon. The pipes are continually giving way, and along the road from the Penrhyn Arms towards Bethesda splendid waterspouts bursting out of the pipes have been so frequent, that the attempts to repair the fractures from which they issued have rendered one side of the road like a rabbit-warren." It is to be hoped there is here some little exaggeration.

Liverpool.—In connection with the improvements just completed, and about being commenced, in the leading thoroughfare (Water-street) to the Pier-head, the local *Journal* speaks of a large new building in Oldhall-street, intended for counting-houses. It is from the design of Mr. Culshaw, and, judging from the working drawings, this, it adds, will be one of the most extensive piles in Liverpool, having a frontage of thirty-two yards to Oldhall-street, and twenty-five yards to George-street. The character is Italian. The lower portion, up to the height of the sub-cornice, is executed with a hard, flinty, white stone, from Parbold. The upper portion is to be executed with Bolton red bricks, intermixed with light-coloured stone dressings, from the neighbourhood of Wrexham. The extension of the docks northward appears to stimulate the erection of counting-houses in that direction. The site of a large warehouse recently razed at the corner of Queen-street, also in Oldhall-street, is to be covered with a pile of new counting-houses, designed by the same architect.

Stockport.—The Goldsmiths' Company of London have caused Mr. Samuel Hunt, the borough surveyor, to remove the stone tablet erected in front of the Grammar School, and place in its stead one executed by Messrs. Samuel and Henry Baun, of this town, stonemasons.

Claycross.—The new schools, the foundation-stone of which was laid on 15th ult. by Mr. Peto, will stand on rising ground, with a frontage to the east, and be approached from a broad terrace-road. They are designed in the form of a T, with a centre projecting about 24 feet from the the frontage line. The public room is to form the principal centre, and will be 54 feet long by 25 feet wide and 25 feet high on the wall, and lighted by three large semicircular-headed windows at the east end, and two double lights at the centre. At the farthest extremity of the room a gallery will be erected, and under it the entrance to infants' school on one side and a library of 19 feet 6 inches long by 15 feet wide on the other. This room is entered by angle porches, which also serve for the principal access to the girls' and boys' schools. These are each 50 feet long, 30 feet wide, and 16 feet high on the wall. In immediate connection with the schools are class-rooms, each 20 feet 6 inches long by 17 feet wide, and also lobby-entrances for hats, cloaks, and bonnets, with lavatories opening into the same. The schools are lighted on each flank with large-sized openings in groups of two and three alternately. The spaces formed in the rear of the buildings by the enclosed walls are to be used as play-grounds. The buildings will be erected in a bold substantial manner, with bricks and irregular quoins of stone at the angles: the windows and doors string course and weathering are also intended to be executed in stone. The roofs will be covered with slates; and the timber construction all open. In the centre, over the gallery, will rise a tower 11 feet square and 60 feet high to apex of roof, and intended for the ventilation of the whole buildings as well as for the clock and bell. Mr. Henry T. Stevens, of Derby, is the architect. The tender has not been let.

Bradford.—The portion of this ground set apart for burial according to the rites of the Established Church has been consecrated by the Bishop of Ripon. The cemetery is situate at Undercliff, on an eminence, and includes an area of 27 acres. It is the property of a joint-stock company, and has cost about 7,000*l.* The ground has been laid out under the direction of Mr. Gay, of Bradford.

Eccleshill.—The chief corner-stone of a new Wesleyan chapel, near the bottom of Stoney-lane, Eccleshill, was laid on Monday in last week. Mr. James Simpson is the architect. The new building is to supersede the old chapel, which is in a very dilapidated condition, and not large enough. The cost of the building is estimated at 1,050*l.* and it will accommodate more than 550 persons. Towards the sum required the trustees have obtained in subscriptions 700*l.* The walls on three sides are already nearly completed.

York.—The consecration of the new church recently erected in the Groves, in the suburbs of this city, took place on Tuesday in last week, the archbishop officiating. This church has been built by subscription, and cost upwards of 2,000*l.* which sum has been realised within about 250*l.* besides 1,000*l.* raised for its endowment: 100*l.* is still requisite for a repair fund. The church is situated in Lowther-street, and is built in the Gothic style of architecture, Mr. F. Jones, of York, being the architect. The interior consists of a nave, transepts, and chancel. The roof is open and high pitched. The pews, or rather open stalls, and the pulpit and reading-desk are of deal, stained and varnished. The windows are glazed with cathedral glass. There is a small gallery in each transept, capable of holding fifty worshippers, and in the body of the church there is accommodation for a congregation of 400, making the total sittings 500.

Coventry.—This town is making progress in building improvements, so long needed. The New Corn Exchange building in Hertford-street is beginning to show its proportions. The extensive National Schools for Holy Trinity parish are almost completed, and similar schools for St. Michael's are nearly roofed. The Town Council are about to erect a Police Station, which will join up to and form part of St. Mary's Hall, and be similar in style. The whole of these works are being carried out from the designs of Mr. James Murray. The South Chancel Aisle of St. Michael's Church is undergoing restoration: and we understand that the sister church "Trinity" is likewise soon to be repewed and restored, both under the direction of Mr. Scott. A large block of shops and offices is in course of erection at the corner of High-street and May-lane, from the designs of Mr. J. Nevill. Several new streets are talked of.

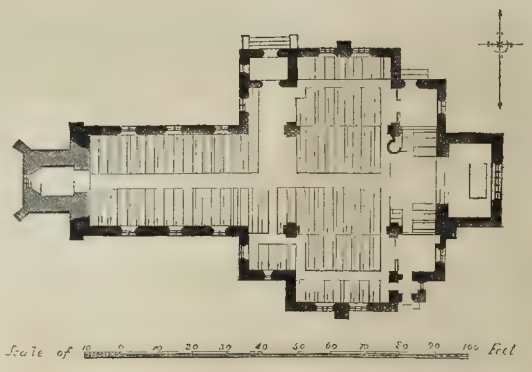
Dalkeith.—Within the last twelvemonth a corn-exchange has been erected in the High-street of Dalkeith, at a cost of rather more than 3,000*l.* The designs were furnished by Mr. Cousins, of Edinburgh, architect. The building is in the Tudor style, the exterior having two gables towards the street, with a central belfry over the centre doorway. The market-hall is 50 feet wide by 175 feet 6 inches long, with a height of 35 feet. There are also rooms for weighing grain, and other accommodation provided for dealers. More than the half of the cost has been obtained by private subscription,—the Duke of Buccleugh heading the list with 300*l.*—leaving an equal moiety still to be realised, which it is proposed to do by imposing a small tax on the sample bags brought into market. It is confidently anticipated that in the course of ten or twelve years the whole amount will have been discharged, and the building be entirely free of debt. The occasion of the completion of the exchange was on Thursday week celebrated by a public dinner, which took place in the market-hall. The hall was decorated with choice plants and flowers from the conservatories of Dalkeith Palace.

Glasgow.—The foundation for the equestrian statue of her Majesty, in St. Vincent-place, says the local *Gazette*, is now brought up to a level with the street, ready for the granite base upon which the statue is to stand. The excavation for the foundation appeared to be about 15 feet deep. One of the large gas-mains which ran right across the centre line of masonry had to be cut, and diverted to one side by the use of two double bends on the pipe.

Greenock.—The first contribution to the great Watt monument about to be erected at the cemetery at Greenock, at the suggestion of Mr. John Gray, has lately arrived from Montreal. It is a very large block of granite, weighing several tons, and is the gift of Mr. Rollo Campbell, the editor and proprietor of the *Montreal Pilot*, a gentleman who formerly resided in Greenock. A large block of whinstone, weighing nearly five tons, says a Glasgow paper, was lately lifted by the divers opposite to the breast at the wharf outside the East India Harbour. This huge stone, which has for centuries impeded the channel, is to be dressed and gifted for the Watt monument.

Jersey.—The foundation-stone of a new Anglican Chapel in St. Helier, according to the *Jersey Times*, was laid on Wednesday week, by H. E. the Lieut.-Gov. Major-General Love, in the presence of a large assembly, in ground prepared for the purpose on the esplanade, fronting Albert Harbour.

HACKNEY TOWN HALL.—Some alterations are to be made at the Town Hall, Church-street, Hackney. Mr. Gliddon, architect. Tenders were received ranging from 187*l.*, and one from Mr. Ramsey, at 157*l.*, was accepted.



LEISTON CHURCH, SUFFOLK.

The great increase, within the last few years, of the population of the parish of Leiston, arising in some measure from the influx of artificers employed in the manufactory of agricultural implements of Messrs. Garrett and Son, and the consequent extension of the village, has long rendered it necessary that further church accommodation should be provided. The demand had been met for some time by the alteration of the church, the repewing, and the construction of a large western gallery; but still more room was required, for which purpose many suggestions were made—some to add aisles, some side galleries, and some to pull down. The latter was considered the only suitable method, and, although opposed by many, was ultimately determined upon, and more particularly as the building had been so hacked about by unskilful hands, and so completely divested of every fragment of antiquarian interest, except the tower, that any association with past times stood but little chance of violation; yet the love of old walls—merely old—kept alive some feeling of opposition. Upon taking down the roof, which was said to be sound, it was found to be a mass of crumbling decay, hidden by the *judicious* application of a modern plaster ceiling, that gave the impression to the eye—and with many to the mind—it would last for ages. How it stood, and, indeed, how very many of our old church roofs stand, is a marvel.

The ancient building consisted of a western tower (still standing), nave, and chancel, without any arch to mark their division: this had shared the same fate as all other characteristic marks—and the building was left merely a huge plastered tube, ugly, inconvenient, and rotten. The length of the building internally, from the west wall of the tower to the east wall of the chancel, was 128 feet, and the width 20 feet 6 inches. The east wall had been rebuilt in red brickwork; the window was circular-headed, with a *wooden three-bay solid frame*. At various times when repairs were required, nearly all the old windows were knocked out—enlarged and rebuilt, or repaired with cement, bricks, or wood, of all forms, sizes, and material; only one window remained in its ancient position and form, but of very ordinary design, and much dilapidated; others were filled up with brickwork: from time to time the walls, externally, had been daubed over with rough-cast, and repaired with red bricks—the surface presenting every variety of colour and undulation, from the broken key of the plaster. The roof was covered with reed thatch, so decayed that the plastered ceiling was mapped over with hard outlines. In taking down the walls many fragments of old tracery and mullions were discovered, and, in one part, enough to show the design of a former window. This had evidently—through neglect or perhaps some other cause—fallen out, and with it part of the side wall; the breach, however, was *carefully* made good and *solid*, and the window built in again, but certainly in a most inglorious manner, the mullions and tracery being chopped into convenient lengths to serve as bond to the solid wall—an economical mode truly; and it may be fair to presume that this cheap mode of rebuilding a window was one of the causes for the enlargement and destruction of the tracery of the others; light was to be obtained in some manner, and as the ancient windows in the walls became dilapidated and fell into the churchyard, and the ingenious mode of rebuilding above named was resorted to, it was found necessary to admit light in some other positions; the roof was then the easiest position, and was decorated with cottage dormers.

The tower is of about the date of 1360, and is a fine plain piece of flint rubble walling, the flints partly split; the quoins are of free stone. There are two angle buttresses at the west front, the faces of which are panelled with cut flint and stone. The tower is surmounted with a battlement and flint panelling; the construction is massive and precisely similar to the numerous churches in this part of the country. No rough cast has defaced the tower, and the windows only required restoration.

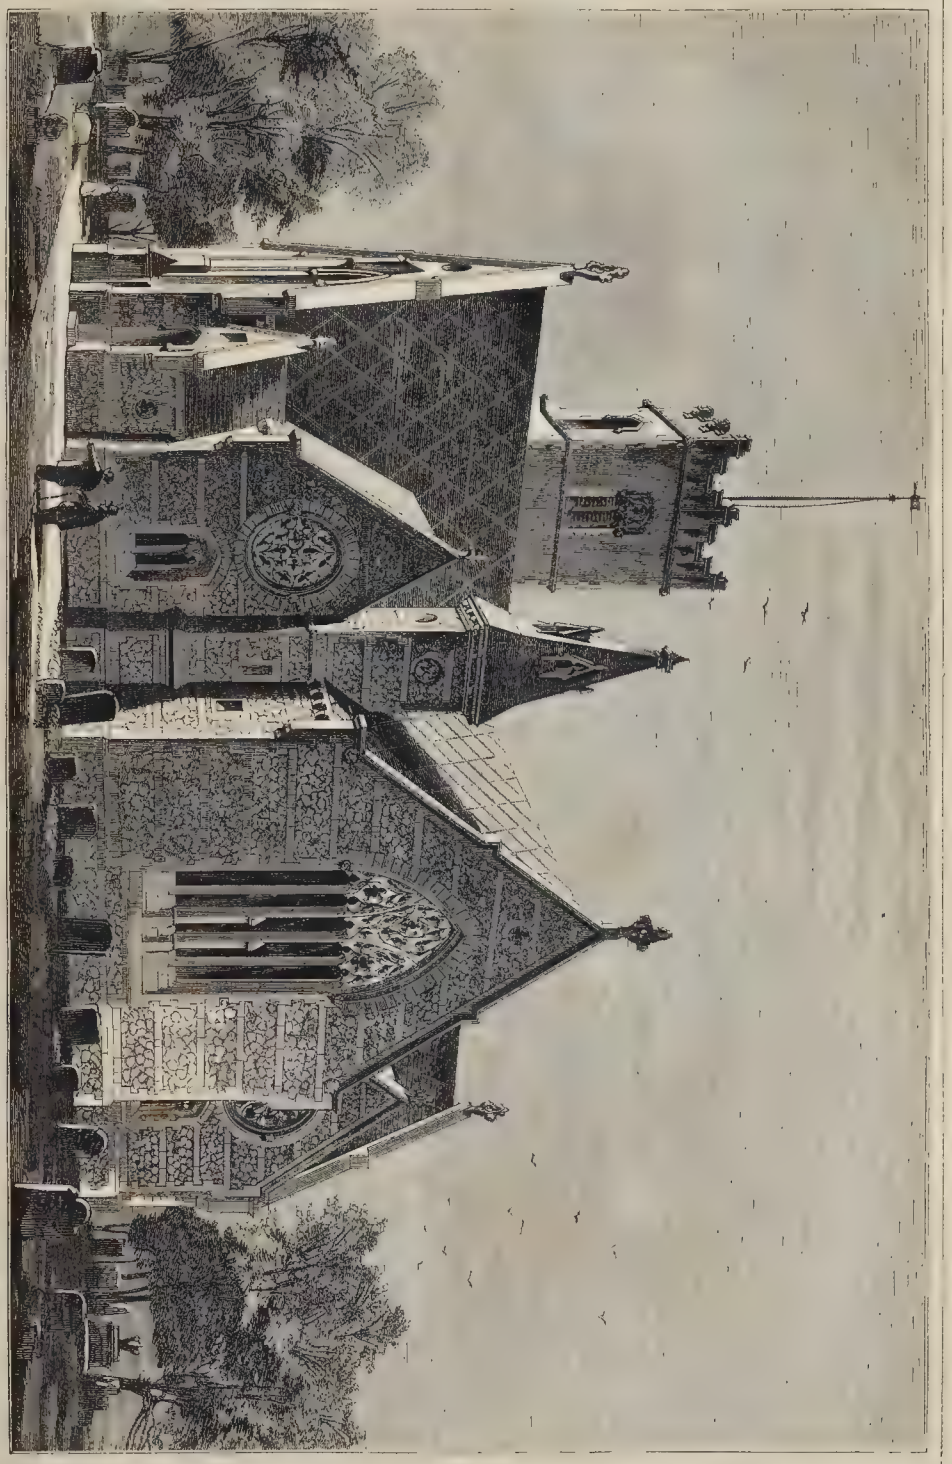
For the purpose of the re-erection of a church suited to this district—plain, neat, and characteristic, and to accommodate 840 parishioners, including children, the parish are indebted to the kind and energetic exertions of the Honourable Miss Thellusson, who, in addition to her own liberal subscription, obtained the support of a numerous list of friends and contributors to the work, and a small grant from the "Incorporated Society for Promoting the Enlargement and Building of Churches," to which must not be forgotten the valuable aid of the farmers in carting the materials to the building. No rate was obtained from the parish, except for the restoration of the lower part of the tower and new church-yard gates. The architect was Mr. E. B. Lamb.

PLAN OF LEISTON CHURCH.

As nothing but the tower of the old building remained to indicate its date, this has been the key to the style of the new design. The plan was arranged to meet the wants of the congregation: it was to be commodious, and with little obstruction to the clear view inside. The whole internal length, from the west wall of the tower to the east wall of the chancel, is 128 feet; and across the transepts, 72 feet 8 inches: these are each 27 feet 6 inches wide. The aisles, if they may be so called, are 13 feet 4 inches long, and 12 feet wide. The east aisles are each separated from the body of the church by open traceried screens, and appropriated to the organ, on the north side, and the vestry on the south. At the west end is a gallery, with open traceried front, for children only. The principal entrance to the church is on the north side. The roofs are open arched timber—framed with hammer beam, and arched corbel under; and all the interstices of the framing filled in with thin perforated tracery; along the walls, between the wall and pole plates, the space is also filled in with perforated tracery. The chancel-arch is of stone, and boldly moulded; the walls are rough stone, not jointed, and all the quoins are of Caen stone. The internal jambs of the windows and doors, from the jamb-mullion, are built with Kentish rag, hammer-dressed, and bonded to the Caen-stone quoins: these quoins project about one-eighth before the face of the stucco. The large central piers are constructed in a similar manner. These piers, as will be seen on the plan, receive the arches of the main roof, and also small wood arches supporting the wall plates of the nave and transepts, next to the aisles. The pulpit is of Caen stone, the reading-desk and communion-rail of oak. The old grave and monumental slabs have been relaid in the church; the remainder of the paving is of 6-inch red and buff tiles, laid diagonally. All the seats are open. The old font has been refixed. The church will be warmed with hot water, by an apparatus placed in a cellar in the centre of the church, from which cellar a passage leads to the outside of the building.

Externally the walls are built of flint rubble, in the same manner as the tower, with horizontal courses of Kentish rag; the quoins and rough arches are also of rag; all the other work in windows, jambs, tracery, arches, strings, mouldings, &c. is of Caen stone. The roof is covered with grey plain tiles, diapered with round end tiles; the eaves gutter, forming a corbelled cornice, is of Caen stone, lined with semicircular lip tiles bedded in cement.

As was previously stated, the church was to be a plain, massive, characteristic structure, devoid of all extraneous aids to give it effect, but for that end, to depend upon its outline,—the essential features only—windows, doors, gables, &c.—forming the decoration, and the materials of construction being so placed as to satisfy all constructive principles, but to be so disposed as to prevent a monotonous appearance.



All the internal walls are stuccoed up to the quoin-stones of the windows, doors, and angles: these stones are left rough, and of such varied heights as the construction required. In a building of economical character, much effect may be produced by a little attention to the application of materials alone, and a richness and *multiplicity* and crispness of form is frequently gained in this manner. The use of rag-stones in the window-jambs and central piers, with the slight crisp line of shadow obtained by the quoins next the plastered wall, add greatly to the consequence of the window-dressings, to the solid appearance of the construction, and contrast pleasingly with the plain plastered portions of the wall,—like the crisp pencil touches of a skilful master in the delineation of a rustic subject, in comparison with the mere dry, clean, unbroken outline of a mechanical representation of the same subject.

The necessity for more church accommodation is every day pressing upon us; and the great difficulty we have to contend with in new works is the limited means, so as to preserve at the same time suitable arrangement with convenience and comfort, æsthetic effect without affectation, and ecclesiastical expression.

In the old works much may be learned, particularly from the small village churches; they should be carefully studied, but *never copied*; and amidst much rude construction and rough material, to a discriminating mind beautiful effects will be found. Out of the local materials the fabrics of bygone times grew up, although in homely garb, yet of agreeable, picturesque, and characteristic expression. The purpose, the locality, and the materials are placed at our disposal: a careful application of these requirements may produce satisfactory results at a small cost.

Leiston Church was to be opened on Thursday, the 31st inst. by the Bishop of London.

Free Exhibition.—The exhibition of the Art-Union of London, in the Suffolk-street Galleries, has been open to the public all the week without tickets, and will close on the evening of Saturday the 2nd. This intimation may still be in time to suggest a visit to some of our readers.

LEISTON CHURCH, SUFFOLK.—Mr. E. T. Lamb, Architect.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION AT CHEPSTOW, TINTERN, AND LLANDAFF.

At the opening meeting, on Monday, the 21st, Sir Fortunatus Dwarris presided, in consequence of the illness of the president, Mr. Bernal,—an illness which unhappily has since resulted in his death. Mr. Pettigrew delivered an excellent introductory address, in the course of which he said that Monmouthshire united in itself antiquities both English and Welsh, being regarded as a county common to both; indeed, it was only classed among English counties in the reign of Henry VIII. on the abolition of the Lords Marches and the final arrangement of Wales into twelve shires. That fact might account for the great number of its castles, several of which remained to the present day, and many of which, dotting the banks of the Monnow, the Wye, and the Severn, formed the points of protection and defence between the English and Welsh from the time of the Normans, who built them. Some of these castles would be visited during the present meeting, and their investigations would probably lead them to agree with the local antiquaries, Mr. Octavius Morgan and Mr. Wakeman, in their work on Caldecot Castle, that none were to be found in Wales which dated beyond the time of the Normans. The county formed part of three dioceses—Llandaff, St. David's, and Hereford, and in each of them objects had been selected for visiting. Belonging to the see of Llandaff was the ancient episcopal palace of Mathern, now a farmhouse, but retaining some of the peculiarities of its pristine condition. It was styled by Leland, "A pretty pyle in base Ventiland, longing to the Bishop of Llandaff." It had not, however, formed an episcopal residence from 1706. The manor was presented to the see by Maurice, King of Glamorgan, in the sixth century, but the palace was the work of different bishops. Maurice was the son of the martyr Theodoric, who was buried in the church. Bishop Godwin repaired his tomb and composed an epitaph for him, which read thus, "Here lyeth intombed the body of Theodorick, King of Morgannah, or Glamorgan, commonly called St. Theodorick, and accounted a martyr because he was slayne in a battle against the Saxons, being then Pagans, and in defence of the Christian religion. The battle was fought at Tintern, where he obtained a great victory."

On the same day Mr. Wakeman, who has been of much service to the Association throughout the week, made an interesting discourse on

Chepstow Castle and the Walls.

He thought that in all probability the Castle of Chepstow was erected on the site of a Roman fort; and if, on their inspection of what was generally termed the chapel, though there is no reason to suppose it ever was one, they narrowly observed the walls, they would find a row of Roman bricks. It was not likely that these bricks would be found in such a position in a Norman castle (?), and he could not help thinking that it was an ancient Roman wall which had been preserved, and in all probability the only part left of a Roman fort there. Old traditions were often very absurd, but, being subjected to rigid examination, it was generally found that they contained some grains of truth in them on which an immense superstructure of fable was raised; and it was a very remarkable fact that there used to be a generally received tradition among the common people of this neighbourhood that Chepstow Castle was built by Julius Cæsar, which perhaps sounded ridiculous enough, but, when they found that it was constructed on the Julian way, the manner in which the error had crept in was palpable, they having evidently mistaken one thing for another. He then proceeded to refer to the history of the Norman castle erected since the Conquest. It was built by William Fitzosborne—Earl William, as he was called—who was in great favour with the Conqueror; who gave him a large portion of the conquered land in this neighbourhood, and appointed him Governor of the Marches. He was always considered a great man, having many ships-of-war. In fact, he had the command of the whole country in this district, and he was mentioned in *Doomsday Book* as the possessor or builder of the Castle of Striguil, the Norman appellation of Chepstow. The castle, after the death of Earl William, who was killed in Flanders, descended to Roger, but, he being attainted of treason, and condemned, it came into the family of Gilbert Strongbow; and here he might remark that it was a very common error to suppose that the name of Strongbow was confined to one person: on the contrary, it was a family name, and therefore the story of its being given to Richard on account of the length of his arms and his great skill in archery was a mere fable. He then traced the castle through the possession of the Lord Marshal of England, William, who espoused the daughter of Strongbow, and, on the division of his immense property among his daughters, the male issue having failed, it fell to the share of Maud, who, marrying Hugh Bigod, Earl of Norfolk, conveyed the Castle of Striguil into that family. He died in 1269, and is supposed to have built all the habitable part of Chepstow Castle; and, although he did not recollect where that fact was recorded, it would probably be confirmed on reference to the architecture of the castle.

The various buildings and objects of interest were visited both in Chepstow and its neighbourhood. The *restorations* at Chepstow Church were, we need scarcely say, duly abused by the visitors.

Mathern, Moyne's Court, St. Pierre Park, Portskewet Church, and Caldecot Castle were visited on Tuesday. At Portskewet Church, Mr. E. A. Freeman said they knew that Harold built a hunting-house there in the reign of Edward the Confessor in the year 1065, and that it was afterwards destroyed by Caradoc, son of Griffiths, of South Wales; and Mr. Freeman saw no reason why the church should not have been built by Harold at the same time. Mr. Freeman pointed out the difference between this church and that at Mathern, and expressed his opinion that the east window in the former was the production of some local workman, and was an attempt at something better. Some conversation followed with respect to a tumulus in the locality, which was supposed to be the site of Harold's house.

The history of Caldecot Castle is obscure. Camden terms it "a shell belonging to the Constables of England," by whom it was held by the service of that office. It now belongs to the Duchy of Lancaster. It is a very picturesque ruin.

In the evening a paper by Mr. G. Baily was read by Mr. Whichcord on the remains of Chepstow Priory, now forming part of Chepstow Church, wherein he expressed his opinion that they were Saxon, and in this Mr. Whichcord coincided. Mr. Freeman maintained that the church was formerly a pure Norman cross church, having a tower in the centre, which tower afterwards fell down and demolished the building, that the side aisles were afterwards taken away, and the architectural beauty of the church destroyed. He had seen many churches very strangely and barbarously altered, but anything so strange and barbarous as the alterations made in this church he had never before witnessed. Although the style of architecture might appear somewhat different from what was generally regarded pure Norman, Professor Willis had laid it down as a well-ascertained fact that this must be considered Norman and nothing else. This district, of all others in England, was the last where they might hope to find any buildings dating prior to the Conquest. Mr. White said he would not pin his faith to the sleeve of Professor Willis nor of any other man. He believed that many buildings now called Norman were erected previous to the Conquest. It was true that the Normans had added to the original, and in many instances perhaps pulled down and rebuilt, yet they rebuilt with the old material, else what became of the stone? Did they break it up for making roads, and take all new stone from the quarry? He believed that they rebuilt with the old stone, or partly pulled down, and then partly rebuilt after their own design, and hence these buildings come now to be regarded as purely Norman. According to the number of edifices now regarded as Norman, they must suppose that the Normans could build as much in ten years as we, with all our appliances of modern art, could build in fifty, which was preposterous. From the absurdity of such a supposition he must confess that he had been led to doubt the truthfulness of the Norman chroniclers.

The Dean of Llandaff was sorry to hear Mr. White question the correctness of the Norman chroniclers, who, he believed, were as correct in what they asserted as any chroniclers that ever existed. From his own personal observations of the style of architecture in Normandy, he was prepared to state that there was nothing, so far as he could discern, to lead him to suppose that the remains of the old priory at Chepstow were not purely Norman.

Tintern Abbey

occupied part of Wednesday, and was treated of at some length by the Rev. Thomas Hugo, one of the honorary secretaries. The other honorary secretary, Mr. Planché, we may say here, was so unwell during his stay in Chepstow, as to be forced, to the regret of all, to absent himself from some of the excursions.

Mr. Hugo, in the course of his paper, observed, that when the ancient seneschal was witness of a scene whose various phases of mediæval pomp seemed to struggle for mastery, he exclaimed, "What people are these: are they mortal men or angels of paradise?" How he prized the man who had accompanied them through that portal and had before his eyes the glorious vista which burst upon his view, who did not share in the feelings of the old seneschal, and admit that there had been giants if not angels on earth, whom they must be content not to cope with but to copy, for their only chance of architectural success. The building in which they now were had a world-wide reputation for almost unapproachable loveliness. It was dedicated, as were all Cistercian houses, to the Virgin, and it owed its foundation to Walter de Clare, by whom it was built in 1131. The founder, who was the son of William Fitz Osbert, to whom the Conqueror had given the manors of Wolferton and Tindenham, died without issue, and he traced the genealogy of the founder through the Strongbow family to 1176, when the only child of Richard Strongbow was given by the king in marriage to Wm. Marshall, who was created Earl of Pembroke and Lord of Chepstow. William, who succeeded his father, granted a charter to the Abbey of Tinterne, dated at Strugele, Chepstow, 22nd March, 1223, and it was from that interesting document that their knowledge of the circumstance of the original foundation was derived. The chronicles of the Abbey were lost, nor could they tell even as much as the names of the abbots. The style in which the present edifice is constructed proves beyond question that Roger Bigod's church was now before them (1287); and to architectural eyes few specimens of ancient work could be more interesting. It was of the transition period, immediately between the Early English and Decorated styles. As they looked at many portions of it, they were almost puzzled to which to attribute it, partaking as it did of features of both conjoined. The arches and slender shafts, and the rich mouldings and ornaments of the former period were combined with the mullioned windows, geometrical tracery, and massive piers of the latter. The result was a building which some would pronounce to be Decorative, and some to be Geometrical, but which possessed too many characteristics of Early English to permit an instructed eye to ignore that element.

We are passing over matters briefly, mentioning only the most salient points.

Llandaff Cathedral

was visited on Thursday, and Mr. Freeman, who has published an account of the Cathedral, as our readers may remember, delivered a lecture upon it. The earliest portion, he said, was constructed by Bishop Urban, in 1120, on the foundations of an old British cathedral; and, from the investigation he had made, he was induced to think that the church of Urban was very small, and that early in the 13th century a grand nave and doorway were added to it. There was a doorway, the architecture of which was very advanced Norman, merging almost into early English; and, indeed, from the time taken in building such edifices as these, half-Norman doorways of this description were not unfrequent. There

was at present a portion of a very strange building within the cathedral with an Italian-fronted door, to which he should allude presently; but he was of opinion that originally there was no arched division, neither were there in the original design any central towers or transept. At present there were two towers at the west end, one the architecture of which was of the perpendicular style, and the other was in a fragmentary condition, standing on an early English foundation, but his scrutiny had induced him to believe that four towers were originally designed, two of which were built, and the others commenced and very shortly afterwards destroyed, never having been completed. In less than a century after its completion the work of destruction began, and it fell by degrees into the most abject and wretched condition, until at length a great storm arose, and blew down the large tower, which, falling on the nave, reduced the edifice to a heap of ruins. In order in some degree to remedy this state of affairs, "a man named Wood" was, about 100 years ago, brought over from Bath to repair it, which he did in the most barbarous manner, completely destroying its architectural beauty. He it was who erected the ugly building and the doorway to which he alluded, and altogether spent about 7,000*l.* in rendering the edifice one of the most unsightly that could be seen.

Of the restoration now going on he spoke well.

Dean Conybeare entertained the members handsomely, as others had done. In the evening, when they had returned to Chepstow, a paper on the Wanderings of Taylor, the water poet, contributed by Mr. J. O. Halliwell, was read. It was compiled from a rare tract, of which only two copies are known to be in existence—one being in the Bodleian Library, and the other in the British Museum. John Taylor, the far-famed sculler poet, united the profession of a waterman on the Thames with that of an author. Though one of the worst English poets that ever lived, according to Mr. Halliwell, which was saying a good deal, his voluminous works were of a high degree of literary value, being replete with allusions of the most minute description to the ordinary occurrences of every-day common life. He used to distribute poetical bills, advertising he wanted to get a little money, and would do so by describing the incidents of a particular journey he was about to undertake. The bills were poetical, and quaintly entitled "John Taylor's Bill, or the Bill of a Taylor without *imprimis* or items." The following extract from one preserved, dated in 1649, of his intention to see the wonders of the West, is a good example:—

"Old, lame, and poor, by mad contentions beggar'd,
And round about with miseries beleaguer'd,
Too many masters made me masterless,
Too many wrongs have made me moneyless,
Helpless, and hopeless, and remedy less,
And every way encompass'd with distress—
To ease my grief I have one trick of wit,
If you that read will set your hands to it—
Which is, when I do give you good account
From London unto Cornwall's Michael's Mount,
Of all my journey, and what news I found
In air or sea, above or underground—
When I do give you truths of this in print,
How I did travel gravel, dust, dirt, flint,
My entertainment, where 'twas good or ill,
Then (in good money) give me what you will;
Your names and dwellings write, that I may find you,
And I shall with my book seek, find, and mind you."

Raglan Castle was travelled to the next day, and a paper upon it, by Dr. Beattie, was read by Mr. Pettigrew; but we cannot go further into particulars, excepting to say that a visit to Caerwert, after the close of the congress on Saturday, will probably lead to the laying open of a Roman villa.

A Novel Dining-room.—The *New York Inquirer*, describing a cylinder for the new steamer *Metropolis*, says that "the contractors, Messrs. Stillman and Allen, lately entertained in it a dining-party of twenty-two people, and after dinner, the tables were removed, a passage-way planked at each end, a pony harnessed into a high-topped buggy, and one by one the guests driven rapidly backwards and forwards through the iron circle. A hundred men can stand erect in the cylinder. It is more than one-third larger than the cylinders of the Collins steam-ships, the largest ever cast in this country. It is 105 inches, or nearly nine feet, in diameter, and has twelve feet stroke of piston."

ST. GEORGE'S HALL, LIVERPOOL.

Some of the external accessories at St. George's Hall are objected to very strongly in Liverpool. Mr. Huggins has published a letter in the *Liverpool Courier* affirming that some of the proceedings will be seriously detrimental to the character and beauty of the building. "What else, in the first place," he writes, "can be said of the granite columns just raised in Lime-street? What purpose but that of destroying all unity can be answered by vertical objects so placed that, from every good point of view, they must cut up the principal façade into two or three sections? Had the building been a Gothic one, with pinnacled buttresses and a predominance of perpendicular lines, the case would have been different; but the characteristic charm of St. George's Hall is the binding up of its varied parts—its open courts and solid walls—into one harmonious mass, by the all-embracing and all-uniting horizontal lines,—and this is seriously affected, if not utterly destroyed, by these interfering and intersecting objects. What may be the actual intention of these columns it is unnecessary to inquire, for no form or finish they can now assume can either give them a right meaning and justification, or render them innoxious."

Again,—"The entire surrounding balustrade is an appendage that no architect can look upon without distrust, the balusters being of far too elegant a form—too flowing and sensuous in line, and the whole balustrade too minute and complex in division for harmony with the lineal severity and simplicity of the edifice, the extreme angularity of which it must render more apparent by its introduction near the eye, and on a level with the basement, where, above all, should be preserved an unbroken massiveness and simplicity.

Would not the expense that is thus worse than thrown away have procured much-needed embellishments for the building itself?"

DOWNING-STREET.

Public attention has of late been so strongly directed to the state of the official buildings in Downing-street and its neighbourhood, that it may perhaps not be out of season if a few facts be brought to light. It appears by the sixth report (folio 169), from the Woods and Forests, presented to the House of Commons 5th June, 1829 (twenty-five years ago), that the sum of 98,966*l.* 8s. was paid, or had been agreed for, for the purpose of clearing a site for rebuilding the present office, as well as such additions as were then required. The ground was cleared, and from that time it has laid a perfect waste, the interest of the vast sum lost, and the annual payment of poor-rates chargeable upon the houses pulled down, paid to the parishes up to the present moment. Nor is this all. From the dilapidated, not to say dangerous state of the offices, a very large annual charge has been going on, in upholding them,—perhaps, from 1,000*l.* to 2,000*l.* annually. Since that period, the absolute requirements for the public service have greatly increased, so much so, that it now appears there is a rental approaching 20,000*l.* per annum, charged to the public. Now, these amounts put together, with interest, will give a loss to the public of perhaps 250,000*l.* and that irrespective of the large annual rent paid for office accommodation. How strange, then, must it appear to every man of business, to hear the Chancellor of the Exchequer say he would gladly alter the state of things, if his finances would afford it. Another point connected with this extraordinary fact is, that Sir William Molesworth should tell the House of Commons he is having (as though it was now thought of for the first time) plans prepared. Might it not be as well that he should look to or revive plans in existence. It is very well known, that when Sir John Soane rebuilt the Council-office and Board of Trade, he prepared plans for the south side of Downing-street, with a frontage in King-street, to correspond with the Board of Trade and Home-office, intending to connect the two buildings by an archway, enclosing Downing-square when rebuilt, and further intending to connect these buildings with the State Paper-office, thus laying down a scheme for what is now deemed so essential—a general combination of public offices; and if Sir William will take a little further trouble, he will find, or should find, plans prepared by Mr. Decimus Burton for the same object. Now, surely the public have a right to know why it is that these proceedings have been so long going on. It really seems almost necessary that those who have the management of public works should unlearn what they have learnt, dismiss old habits and customs, and set to work in right earnest, taking the example of our large private establishments, with all the modern appliances that science and indomitable perseverance can effect. An Ex-Official.

THE UNIVERSAL EXHIBITION OF THE GERMAN ZOLLVEREIN.

Munich.—The 16th August last was a great day for the Bavarian capital, and the whole of Germany, which thus found itself *united*, at least within the walls of the Munich Crystal Palace. The following are some particulars of the structure, erected after the plan of M. Voit, by Messrs. Cramer Klett. The building occupies part of the Botanical Gardens of Munich, and is of a rectangular shape, 800 feet long, and 160 feet broad, the ends of which terminate in accessory buildings, decreasing in size under right angles. The middle of the building is occupied under a right angle, by a transept, 285 feet long and 160 feet broad. The transept and the main building are divided into three naves; a principal nave 80 feet broad, and two lateral ones, 40 feet broad. The plan affords altogether the impression of worthy festivity and splendour. The aggregate area of the building comprises 134,000 square feet, of which 38,000 appertain to the galleries, and 80,000 square feet to the counters, tables, &c.

The Munich Exhibition offers specimens and samples of 6,588 exhibitors, of whom the greater part beloug to the industrial classes, being manufacturers or artisans. Of German States the following is the statistical proportion:—Baden has 180 exhibitors; Bavaria, 2,331; Frankfort, 45; Hamburgh, 78; Hanover, 158; Austria, 1,477; Prussia, 676; Saxony, Kingdom, 462; Wurtemburg, 443, &c. The proportion of exhibitors to the *population* of their country is most anomalous: in Bavaria, for instance, there is 1 exhibitor to every 1,960 of the population; in Wurtemburg, 1 in 3,912; in Prussia, 1 in 22,300, &c. The number of exhibitors cannot, therefore, be taken as a scale of the industrial activity of the sundry German States. The Exhibition of Munich, moreover, labours under this disadvantage, that the number and extent of the specimens exhibited by a manufactory or individual, does *not* stand in a due proportion to the magnitude of their industrial exertion. An unfair way of displaying one's samples is also animadverted upon by the German press.

The catalogue is divided into twelve groups, viz. 1. Cerealia and combustibles. 2. Agricultural produce, and materials which are the result of a first, rough preparation. 3. Chemico-pharmaceutical and dyeing substances. 4. Substances of nutriment and of general usage. 5. Engines. 6. Instruments. 7. Textile tissues, leather, and vestments. 8. Metal ware and arms. 9. Stone, earthen, and glass ware. 10. Wooden and Nuremberg goods. 11. Paper, writing and drawing materials, and print. 12. Fine arts. These groups comprise specimens of very different size and weight, of which some are placed on the ground-floor, others in the galleries. It has been observed that, for the sake of affording a due appreciation, all the different specimens of the same articles, and not those produced by the same manufactories, ought to be placed in juxtaposition; for instance, all drawing-papers, all sleepers of railroads, &c. This would occasion much work and trouble; but is the only means of imparting a due appreciation of most of the specimens exhibited. The cost of this exhibition is estimated at one and a half million of florins, while the daily receipts are only about 600 florins, making in *three* months no more than 54,000 florins (about 5,000*l.*)

FOREIGN INTELLIGENCE.

Latest Excavations at Syracuse.—There has existed from time immemorial a tradition that the island of Ortygia had before been united to the Syracusan shore. Late excavations, undertaken by Prince di Sta. Elia, have now proved the existence of an aqueduct, which reaches the depth of 110 *palmes* under ground, and is situate, at the place whereto the excavations have now reached, 15 feet under the level of the (present!) sea. Thus the wonder of modern times, the Thames tunnel, might have had its prototype in oldest antiquity, when Trinacrian engineers conducted water under the harbour of Lacci to the island. Still more, one of the ancient myths, that Alphaios, enamoured of Arethusa, visited her by a subterranean passage, seems to be but the glare of an old fact veiled in fiction.

A new Competitor of Steam.—The *Moniteur* says, that Dr. Augustin Carosio has made a new discovery, called, *pile hydrodynamique*, which, according to the opinion of the inventor, possesses an immense power. He bases his theory on an axiom by Faraday of the electro-chemical equivalent. This machine consumes only what it engenders by its own force; and that force, not analogous to that of steam, is not limited by the degree of resistance offered to it, and neither possesses the danger nor expense of a combustible. It is further stated, that the Prussian engineer, M. Siemens, is engaged to build such an engine at Genoa, to be exhibited in London.

Jahrbücher, &c. Journal of the Antiquarians of the Rhinelands. Bonn, 1854.—The society is in a prosperous position, containing nearly 300 members. The society is also now in connection with thirty-eight other academies and associations. The chief contents of this number relate mostly to antiquities of the Rhinelands, as—The Roman Colony at Kreuznach; Durnomagus, or Dormagem, in the times of the Romans. Amongst the reviews is that on the art of reading Roman inscriptions; notice on the arms and chariots of war(!) found at Tiefenau, near Bern. The most interesting subjects of the journal are illustrated in three well-executed plates.

M. Richartz, of Cöln.—The name of this patriotic citizen ought to be universally known, as he has given in his lifetime 100,000 thalers for the building of a museum. M. R. has received all the honour due to such an action at the hand of the municipality of Cologne, and the building will be begun forthwith, that the worthy patriot may live to see what he has so praiseworthily originated.

THE PUBLIC LANDS, SOUTHAMPTON.

THE plan for laying out and planting the public lands obtained by competition about two years ago is exciting comment in the progress of carrying it out. A handbill which is being circulated, signed "W. H. Rogers," proceeds,—"I have no hesitation in saying, that the veriest tyro in the art of landscape gardening would have felt abashed in putting forth a design for such a locality so perfectly destitute of every feature of skilful display, either as regards utility or ornamental effect. I, of course, speak of the plan as sent in before the Committee, and not according to the mode it may eventually be carried out; for even the ugly clumps of very common trees planted in the Hoglands are not in the original design, and as to the so-called Arboretum in East Marlands, the whole thing is a perfect absurdity—a miserable abortion. The walks appear to be formed regardless of public utility, and the few geometric clumps of poverty-looking shrubs within and without the circumference of a sort of horse-ring (described in the plan as 'Grand walk or Victoria ring,') cannot claim a higher designation than that of a Cockney tea garden."

THE PAPER-SUPPLY QUESTION.—In reference to the suggestion started in our columns, that some mode of discharging printed ink from paper already used, and reconverting the paper into pulp, and the pulp into new paper, there has been some correspondence in other metropolitan papers, and one correspondent states that he has "succeeded in getting the ink out of printed paper, so that it may be used again."

BRICKMAKING.

PRICE OF BRICKS.

I WAS in attendance last week on a compensation case, when I heard two well-known brickmakers, Mr. Odell and Mr. Wright, of Old Ford-lane, give evidence on oath, that the best stock bricks could be made for 13s. 6d. per thousand, exclusive of royalty, but including all other charges, interest of money, cost of superintendence, loss on breakage, shuffs, &c.; and that 300*l.* capital was enough for a field making one million per annum.

Mr. Wright also stated that many persons would contract to make them, including everything, for 12s. per thousand.

If this be the case, how are we to account for the present price of good stocks, 28s. per thousand, the demand not being great because of the depression in speculative building? Perhaps some of your correspondents can explain the reason why more than 100 per cent. profit is obtained in the brick trade. A SURVEYOR.

CATHEDRAL REVENUES AND EXPENDITURE.

WHEN the exorbitant demand made by the Dean and Chapter of Westminster, for permission to erect Campbell the poet's monument in the Abbey Church, was under discussion, a short time since, in the House of Lords, Lord Aberdeen, by way of apology for the reverend body, stated that they had no corporate funds wherewith to repair and maintain the fabric, and were therefore necessitated to seek them from such sources as the one under consideration. No funds! the published report tells a different story!* Westminster comes next to Durham in amount of annual revenue! Whence has Ely drawn the resources to carry on the works so well performed there? and whence have many other cathedrals in which reparation have been extensively carried on for many years—Canterbury, for instance, especially. In sad truth, the two last in the list—the collegiate churches of Westminster and Windsor—though high in point of amount received, cut but a sorry figure in this list, when it is considered what the dispensers of the funds have done, to maintain the sacred fabrics entrusted to their care! RENDER TO CÆSAR, &c.

BOSTON CORN-EXCHANGE AND ATHENÆUM COMPETITION.

WE stated a fortnight ago, that fifteen designs had been received for this building, and that three bearing respectively the signatures of "Fides," "Fidelitas," and "London," had been selected for final discussion. We are now informed that at the meeting when this selection was made, the directors resolved to purchase additional ground, and that the selected plans should be returned to the architects, with a request that they would alter the same, if they thought proper, in reference to this purchase, and other arrangements. The meeting was adjourned to the 9th day of August, and the architects were instructed to return their drawings on the previous day. At the adjourned meeting, it was resolved, "that the plans of "Fides" (Messrs. Bellamy and Hardy, of Lincoln) be selected as the best; those of "London" (Mr. W. Stainton, of Boston), as the next approved; and those of "Fidelitas" (Mr. W. Botterill, of Hull), as the next approved." The votes for these three were very nearly even.

* The following table, from Report of the Commission, shows the revenue and expenditure of twenty-six cathedrals in England and Wales, and the two collegiate churches of Westminster and Windsor, for the year 1852:—

	Revenue.	Expenditure.
Canterbury	£26,211 13 4	£23,065 3 10
York	3 011 7 7	3 011 7 8
St. Paul's, London	13 746 7 [illegible]	13 746 7 [illegible]
Durham	57 801 14 [illegible]	57,[illegible] 14 [illegible]
Winchester	22 [illegible] 3 4	21 [illegible] 7 3
Wells	4,717 14 [illegible]	4,717 14 [illegible]
Carlisle	6,898 7 6	6,[illegible] 2 1
Chester	5,522 8 8	5,530 7 1
Chichester	8,505 10 5	7,905 19 5
Ely	16 214 2 11	14,495 11 8
Exeter	11 441 0 0	11 4[illegible] 9 9
Gloucester	7,903 15 [illegible]	7,908 15 [illegible]
Bristol	9,789 13 0	9,9[illegible] 0 3
Hereford	6,504 9 1	6,501 19 [illegible]
Lichfield	3,94 10 5[illegible]	2,[illegible] 1 5
Lincoln	8,8[illegible] 9 8[illegible]	9,32[illegible] 16 [illegible]
Llandaff	7,[illegible] 14 8	1,383 2 10
Manchester	7,799 19 9	7,[illegible] 19 9
Norwich	7,[illegible] 0 [illegible]	7,5 4 14 3
Peterborough	6,[illegible] 14 10	7,[illegible] 5 4
Ripon	5,[illegible] 13 2	5,[illegible] 14 [illegible]
Rochester	1[illegible] 4 10	1[illegible] 0 4
Salisbury	2,[illegible] 17 5	2,[illegible] 8 7
St. Asaph	1,[illegible] 4	1,48[illegible] 6 0
St. David's	1,[illegible] 1 9	1,[illegible] 8 7
Worcester	10,[illegible] 12 [illegible]	8,[illegible] 14 [illegible]
Westminster	30,[illegible] 1 1	29,[illegible] 1[illegible]
Windsor	19,[illegible] 4 [illegible]	20,[illegible] 6 6
Totals	£313 0 5 2 0	£312 236 5 10[illegible]

The cathedral of Bangor, it is stated, has no corporate property, and the chapter of Christchurch, Oxford, declined to give any return, on the ground that their property is strictly collegiate.

THE MUSEUMS, TRINITY COLLEGE, DUBLIN.

WE did not intend to print anything more on this subject, but observing in the Irish newspapers that an inference is wrongly drawn from our remarks, to impute an untruth to the Messrs. Deane and Woodward, it is necessary we should say, in confirmation of Messrs. D. and W.'s statement, that in the descriptive particulars with which they furnished us, no names were given. The working drawings of the elevations were signed by them (correctly so, according to Mr. M'Curdy's statement), and we, therefore, as a matter of course, introduced their names into the account. The position of the several parties is now made clear by their statements, and we sincerely hope that no angry feeling will be permitted longer to exist, and that all will concur to render the building worthy of the beautiful capital of beautiful Ireland.

Miscellanea.

LITERARY TASTES OF ARTIZANS AND MECHANICS.—A record has been kept at the Marylebone Free Library in Gloucester-place, New-road, of the books used by the visitors during the last six months, and in respect to works of established reputation. This record forms an interesting index of the various classes of books desired by those frequenting a free library. With regard to books more recently published, any conclusions on the subject rest on less solid grounds, as the knowledge of the existence of many modern publications very often depends on other considerations than their positive and intrinsic merits; but whatever the statement may or may not prove, it serves, at all events, undeniably to show that artizans and mechanics have a great disposition to read, and that it would be a matter of very great regret if every opportunity were not afforded them to indulge so excellent and praiseworthy an inclination. The Library affords this opportunity in an easy manner. During the short period of its existence it appears to have received no less than 17,397 visits, and to have issued 18,163 volumes.

TALK OF THE STUDIOS.—Mr. Bell, the sculptor, who has lately received the commission to execute the large Guildhall memorial to the late Duke of Wellington, has just been commissioned by Colonel Adair to execute a marble heroic statue of "Armed Science," to be presented to Woolwich mess-room.——A colossal statue of the late Duke of Gordon is about to be erected on the top of the monument at Lady Hills, in Morayshire.——A statue of her Majesty, by Mr. Noble, is about to be erected in the Peel Park, Manchester.——Judge Boyle is about to have two statues raised to his memory, one at Irvine, his birthplace, and the other in the Parliament House, Edinburgh.——Mr. Alexander Macdonald, of Aberdeen, has presented to the managers of the Royal Infirmary of Edinburgh, a polished granite pedestal and pillar for the marble bust, by Campbell, of the late Mr. Liston, surgeon, which was sent to the infirmary from London.——Mr. Burnand's statue of Ebenezer Elliott is completed, and about to be erected at Sheffield.——The Bill for the Dublin National Gallery, with certain amendments, has been adopted by the Lords.——Orders have been given by H.M. the Emperor of the French, to complete the works at the Tuileries and Louvre before the time of the opening of the Exhibition next year.——We are happy to learn (says the *Edinburgh Guardian*) that the subscription for the monument to Professor Wilson progresses most favourably. The subscriptions already exceed 900*l.* The sum required is about 1,400*l.*—*Critic.*

INSURANCE OF WORKMEN'S TOOLS.—I heartily concur in the suggestions of your correspondent "E. M." and wish they were more generally adopted. The proprietor of the factory in which I am engaged was one of the first to do so, and when a fire, about a twelvemonth ago, destroyed Messrs Kirkman's workshops, we enclosed a general subscription from our workmen, with a recommendation that they would for the future adopt our plan of *insuring the workmen's tools with the stock in trade.* A very small sum annually will thus cover the risk by fire of a large quantity of tools, and in the event of such a calamitous occurrence there would be no loss to the men beyond a few days' time, until temporary workshops were prepared. I trust the men in Mr. Cubitt's employ are not losers individually, but should that unfortunately be the case, and a subscription be raised to replace their tools, I have no doubt our people will gladly give their mite.

THE CLERK OF WORKS AT CHAPPUIS'S FACTORY.

*** We have been asked to say that the Athenæum Fire Assurance Company has anticipated the disadvantage the working man has hitherto been under, and insures on a low scale, which includes Government duty.

IRON AND OTHER METALS.—If the ironmasters in the Midland districts ever realized the late rise of prices, they do not appear now to do so, while not only the home, but the Continental and American trades, have received a decided check, attributable to the mere announcement itself. "Although no reduction has been declared," says an authority in the trade, writing from Birmingham, "circulars have been issued in some trades, which would seem to indicate that iron can be purchased on easier terms than at the commencement of the quarter. In July, the nailmakers, in consequence of the decision at Stewpony, issued circulars, announcing the advance, and requiring a corresponding rise on nails. Within the last few days, however, circulars have been issued, announcing that they can now be purchased at 10s per ton less, from which it is not unreasonably inferred that they have obtained a reduction upon the raw material. Some manufacturers of hollow iron wares have likewise made similar reductions, and this is also viewed as the result of a giving way on the part of some houses. There is, on the whole, rather a downward tendency in all descriptions of iron, and, whether true or otherwise, the general impression amongst manufacturers is that the market will become easier; and few are, consequently, disposed to order, except for immediate use."——In the copper market there has not been any change. The demand continues about the average. Mr. Phillips's liquid flux, for the purification of metals, is said to have been tested with copper and brass. When applied in a molten state, either in or out of the furnace, the effect is said to be the expulsion of the dross in a more perfect manner than could be attained by the present mode of fluxing. The metal is considered, under this new process, to be closer in texture, the castings more solid and tough, and better adapted for turning or boring. For wire, the application of the flux is also regarded as beneficial.——In the iron manufacture, Messrs. Wright and Brown, ironfounders, of Newcastle-on-Tyne, have patented some improvements in cupolas, which are also applicable to smelting and other furnaces.——Mr. P. J. Meeus, of Paris, has patented the gilding and coating with metals, by means of heat and pressure, articles composed of or coated with gums, gutta-percha, caoutchouc, or mixtures or combinations of these or analogous substances; also certain methods of imitating embroidery and embossed or figured goods of all descriptions, on yielding fabrics and bodies, and the production of ribbons, trimmings, braid, gold or silver lace, fringes, and articles of a similar description, in gold, silver, platinum, or other metals, either plain, coloured, tinted, or shaded, so as to resemble mother-o'-pearl, or otherwise.

ELECTRO-TELEGRAPHIC PROGRESS. — The long looked-for submarine cable between Holyhead and Dublin will, it is said, be laid down in the course of this week, by the Electric Telegraph Company. Two of these magic bands already join the shores of the sister isles, both of them landing near Portpatrick in Scotland, and Donaghadee in Ireland. The line between Holyhead and Dublin has the advantage of being more direct, though exposing a greater length of sea to be crossed, but length of sea line is of little consequence, as has been successfully proved by this company's submarine cable between Ipswich and the Hague, in Holland, and that lately laid down by the Mediterranean Telegraph Company between Spezzia, in Italy, and Corsica; the former 120 miles long, and the latter 85. This company, according to the *Chester Chronicle*, intends to lay down two more cables in addition to the one now ready; and these cables, it is believed, are now in construction by Messrs. Hyde, Fenton, and Co., of Queen's Ferry, near Chester.

TO PRESERVE FENCE POSTS. — The *Oswego* (U.S.) *Times*, states that, a Connecticut farmer recently took up a fence which had been planted fourteen years, and found that all the posts planted in the same direction as when growing had rotted at the bottom, while those which had been inverted remained sound.

CERTIFICATES FOR ART.—The first examinations by the Department of Science and Art of candidates for masterships in local Schools of Art, have just been concluded. The candidates were examined in geometry, perspective, mechanical drawing, and elementary colouring, having to perform exercises in a limited time: they were also required to produce various works in these subjects, executed during the past year. The following obtained certificates:—Anderson, H. J.; Arthur, T.; Baker, W. J.; Berkinshaw, S.; Brooke, A. N.; Chenalier, J. W.; Cole, A.; Croome, J. D.; Elton, S.; Finnie, J. F.; Fussell, J. R.; Gill, G.; Griffiths, W. T.; Hagreen, H. B.; Healy, J.; Holmes, T.; Kemp, J.; Kinnebrook, W. A.; Lauchenick, J. C.; Lyne, R. G.; Muckley, W.; Pyne, C. C.; Rafter, H.; Richardson, J. V.; Ryles, G.; Smeetle, J. F.; Sturtenant, J. F.; Swallow, J. C.; Swinstead, C.; Thompson, J. C.; Tucker, R.; Walker, M.; White, J.; Wigzell, M.; Yeats, G. P.

ACCIDENT AT STIRLING.—The new High School at Stirling is being built on the site of the former slaughter-house, the high and broad slated sheds of which have been used for the masons employed. On Monday week—fortunately after the workmen had retired—nearly 50 feet of the sheds came down, burying several individuals in the ruins, and injuring them ing several individuals more or less seriously. The accident is attributed partly to late heavy rains, and to the circumstance of some supports having been shifted by covetous persons to be used as firewood.

A PARISIAN IMPROVEMENT.—The Place du Corps Legislatif, says *Galignani*, is about to be decorated with a statue of "France." It is to be placed on the pedestal in the centre, which has been unoccupied for several years. This statue will be executed in marble by M. Feuchères, and bas-reliefs will ornament the pedestal.

DESTRUCTION OF A GIRDER BRIDGE.—On the Birmingham, Wolverhampton, and Dudley Line, now in the course of construction, and about midway between Soho and Handsworth Stations, an iron girder bridge is thrown over two roads leading respectively from Soho and Handsworth to Winson Green (the Birmingham New Gaol and the Workhouse). Coming from the great earth mound at All Saints, says the *Birmingham Journal* of last week, an engine and two laden trucks had passed safely over this bridge, when in a moment the left-hand iron girder gave way, doubling up, as it were, in its centre, falling into the highway below, and carrying with it trucks, rails, sleepers, and iron supporters. In fact, the destruction of the whole bridge was complete, and there stands only the right-hand line of iron rails and the corresponding girder; but this is entirely displaced, although in a whole state. Nearly one-half of the cross iron supporters (rafters) are smashed in two. Messrs. Branson and Gwyther sent 200 men to repair the injury. Its cause seems to be unknown, as the two main outside girders were of enormous dimensions, and each cast in one piece. There are not, as in Great Charles-street, Birmingham, any under supports to the bridge, but the roadway is not so wide, and it would seem that the structure was considered amply secure for any weight it was to carry. Only one line of rails, broad and narrow gauge, has been completed, and upon this the engine and carriages have run for many days. No injury to life or limb occurred. So recently as the Thursday before the accident the Government Inspector, contractors, &c., passed along the whole line from Birmingham to Wolverhampton.

THE MASONS' STRIKE AT DONCASTER PARISH CHURCH.—The turn-outs have shown no signs of returning to their work: on the contrary, under their persuasion workmen who had come to Doncaster have been induced or obliged to quit the town again; but their efforts to compel their former employer to accede to their terms, according to the local *Gazette*, will not prove successful. Mr. Ireson has consented to allow his men to leave at four on Saturday afternoon, instead of five, the usual hour at Doncaster; and to call over their names in his time. The only point of difference, therefore, is that the contractor requires his men to assemble at six on Monday, as is also usual at Doncaster; and his refusing to turn off a "nobbler," who is an excellent workman. The contractor has already entered into arrangements with an equal number of men to the turn-outs. A handbill, warning all interested of the terms of the clause of the Act in regard to combinations, has been issued and read at the Guildhall, as intimidation has been used in order to prevent the workmen from proceeding with the contract.

STATE OF LINCOLN CORN-EXCHANGE. — We are sorry, says the *Lincolnshire Chronicle*, to hear that the Corn-Exchange, which has just been enlarged and new roofed, at a cost approaching 2,000*l.* is in an insecure condition, and that the directors have had Mr. Cubitt, of London, to inspect the same. Any one standing on the outside, and looking at the ridge of the roof, will find that it has given way, and so far has it given way, that the centre of the roof, pressing against the glass sides, has forced the glass out of its place, and broken some of the sheets or pieces. This unfortunate concern seems doomed to be ruined; and yet surely some one is responsible for the gross ignorance displayed in putting on a kind of roof which cannot support its own weight.

APPLICATION OF SLAG.—Dr. Robinson, of Newcastle, has obtained a patent, in which he claims as his invention the conversion of molten slag into sheets or plates, by pouring it upon an iron or other table artificially heated, where, by rolling or pressing, it may be reduced to any requisite thickness. The plates thus formed are afterwards annealed by being allowed to cool gradually for six or eight days or less. It is proposed to use these sheets or plates for roofing, covering walls, and other useful purposes, and to cut, perforate, or ornament them as required, by means of suitable elevations and depressions in the rollers.

THE DUBLIN PAINTERS' STRIKE.—A conference of delegates from the men with the masters was to take place on Wednesday last in Dublin, at which the following gentlemen were to act as mediators or arbitrators:—Mr. Dargan, Dr. Gray, of the *Freeman's Journal*, and Mr. Burke, of the Shelbourne Hotel, Stephen's-green, Dublin. The unfortunate differences which have occurred between the master painters and their workmen are likely, it is believed, to be shortly brought to an amicable settlement.

FINSBURY-PARK.—It is very evident that we shall never induce the Government to advance the large sum required for a park on the extensive plan originally proposed. I have long been of opinion that several detached open spaces of twice the size of Russell-square would, for all practical purposes, be more generally useful than larger sites, which, when you calculate the reserved parts to which the public have no access, and the other pieces from time to time diverted to private use, are really not so large as they seem. There is yet time to obtain at least a dozen pieces of the size I propose in the present suburbs; and if two such were reserved for Finsbury, planted with a row of trees round the margin, with a simple gravel walk, and, above all things, with shelter from an occasional shower, there are few fathers of families who would not bless our foresight in thus providing a safe place of resort for our children. The expense would be comparatively trifling; and two men, to relieve each other, would be ample protection. The reservation of sufficient ground round each plot for houses would go far to pay the expense.—B.

TENDERS

For warehouse, Cannon-street, for Mr. Hudson. Mr. T. Hague, architect:—

Cubitt	£4,320	0	0
Haynes and Co.	4,190	0	0
Rowland and Evans	4,124	0	0
Batterbury	4,074	0	0
Gammon	4,042	0	0
Myers	3,785	0	0

For two houses at Twickenham. Mr. Searle, architect:—

Sands and Co.	£1,800	0	0!
Pope (Twickenham)	1,460	0	0
Earl	1,458	0	0
Suter	1,425	0	0
Wilson	1,124	0	0
Page	1,100	0	0
Clever and Stanger	1,040	0	0
Vidall (accepted)	975	0	0!

For a double villa, Victoria Park. Mr. Bainbridge, architect:—

Wood and Son	£2,077	0	0
Case	2,050	0	0
Perry	2,031	0	0
Page (accepted)	2,028	0	0

For the erection of part of the works for the manufactory of Messrs. Grice and Weston, at West Bromwich, exclusive of boiler-house, engine-house, chimney-stack, basin, and canal-bridge. Mr. G. B. Nichols, architect:—

Binket and Nelson	£1,720	0	0
Brooks	1,689	7	6
Philpot	1,575	0	0
Hartland	1,494	13	0
Bonell	1,460	0	0

With the addition of boiler-house, engine-house, and stack:—

Brooks	£1,779	19	6
Hartland (accepted)	1,682	19	6
Bonell	1,639	8	2

For alterations and additions to the Royal Free Hospital, Gray's-inn-road. Messrs. Nelson and Innes, architects. Quantities supplied:—

	New Wards.	Laboratory and Operating Theatre.	Total.
	£.	£.	£.
Locke and Nesham	3,280	1,527	4,807
Wm. Cubitt and Co.	3,154	1,411	4,565
Fish	3,100	1,380	4,480
Todd and Co.	2,990	1,258	4,248
Macey	2,625	1,348	3,973
Rowland and Evans	2,728	1,136	3,864
Pollock and M'Lennan	—	—	3,773
Carter and Ellis	2,515	1,175	3,690

ADVERTISEMENTS.

JOHN HOWS, Buckley.—If he will call on G. B Beddington Corner, he can have six months' work.

A MECHANICAL DRAUGHTSMAN WANTED, capable of taking out quantities and keeping a small set of books. As the appointment may be permanent, it is requested that lowest terms will be stated.—Address, in the first instance by letter only, with reference and full particulars of previous employment, to S. W. R. Mr. LOWS, Stationer, Abchurch-lane.

A CIVIL ENGINEER and SURVEYOR requires a steady OFFICE CLERK, capable of finishing maps and of preparing plans and sections. The salary will not exceed sixty guineas per annum Applications may be made to A. B. care of Mr. Roberts, Bookseller, 197, High-street, Exeter

SURVEYOR'S ASSISTANT WANTED.—The Local Board of Health in Kingston-upon Hull wish to APPOINT an ASSISTANT to their SURVEYOR, at a salary of 75 per annum. Each candidate must be a neat and expeditious draughtsman, and be skilled in surveying and levelling, and in measuring up work; and it is desirable that he should have a practical acquaintance with sewerage works, and the construction and repair of roads; and he will be required to commence his duties forthwith Applications, in writing, are to be sent, sealed, to the Surveyor of the Board, at his Office, in Sculcoates Hall, Hull, on or before THURSDAY, the 7th SEPTEMBER inst, at TWELVE o'clock at noon.—By order,

ROBERT WELLS, Clerk to the said Board.

8, Parliament-street, Hull, 26th August, 1854.

TIMEKEEPER, CLERK, &c.—WANTED, a SITUATION as TIMEKEEPER, CLERK, &c. or in any capacity where stability of character is required, by a Young Man, at present in the employ of a timber merchant. He is a good penman and bookkeeper, and can give satisfactory references —Address, pre-paid, J. H. Office of "The Builder."

TO STONEMASONS AND OTHERS.

THE Commissioners for Paving, &c. Camden-town, will meet at their rooms in Pratt-street, Camden-town, on THURSDAY, the 7th day of SEPTEMBER next, at TEN o'clock in the forenoon precisely, to receive TENDERS for PAVING FOOTWAYS upon the district of Camden-town, with Yorkshire stone paving, and forming such footways with Aberdeen granite kerb, at per square yard superficial; and also for paving crossings and channels of carriageways with Aberdeen granite at per square yard superficial The contract to be for three years, determinable, at the option of the Commissioners, at the end of the first or second year, and the contractor will be required to give security for the due performance of the contract.—Further particulars and forms of Tender may be obtained at this Office, and at the Offices of Messrs DENT and SON, Surveyors, 38, High-street, Camden-town. By order of the Board.

SAMUEL BARKER BOOTH, Clerk to the Commissioners.

31, Tavistock-square.

WANTED, a respectable Youth 16 or 17 years of age, where he will have the opportunity of learning joiner's work, inlaying, French polishing, &c. A small salary will be given at first, and raised according to capacity. Good references required.—Apply, by letter (prepaid), to the London Parquetry, 8, Whitefriars-street.

WANTED, an efficient ASSISTANT in an ARCHITECT'S OFFICE, in London. He must be a good and experienced draughtsman.—Address, B. A. Office of "The Builder."

WANTED, a FOREMAN, in an Oolite Stone Quarry. He must be competent to measure stone, and keep accounts.—Applications, accompanied by reference, to be sent to Messrs. KIRK and PARRY, Slenford.

TO PAINTERS.

WANTED, by a Builder in the Country, a middle-aged person as HOUSE PAINTER and GLAZIER. He must be able to grain, and take charge of a job occasionally.—Application, stating terms, and reference, to be addressed to P. G. Office of "The Builder."

TO PLUMBERS, &c.

WANTED, a THREE-BRANCH HAND. Apply to B. 5, Carlton-street, Regent's-street.

WANTED, IMMEDIATELY, temporary ASSISTANCE in the Office of an Architect. One competent to prepare working and detail drawings, and no objection to carving, if required. Address, stating age, terms, and where last engaged, to H. T. care of Mr. Taylor, 31, Union-street, Birmingham

WANTED, a RE-ENGAGEMENT by a Young Man fully acquainted with the routine of a Builder's Office. Address, L. 5, Carlton-terrace, Harrow-road.

WANTED, an ENGAGEMENT as OUT-DOOR FOREMAN, by a thorough practical JOINER; a country job preferred.—Address, J. M. Office of "The Builder."

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a permanent SITUATION as PLUMBER or THREE-BRANCH HAND. Address, Y. Z 19, Crawford-street, Bryanstone-square.

WANTED, by a respectable Young Man, aged 18 years, a SITUATION in a BUILDER'S OFFICE, which he has been accustomed to for nearly four years, where he could assist in making out drawings, &c. for which he has a very good hand. London preferred.—Apply by letter, to A. B. C. the Post-office, Stevenage, Herts.

WANTED, by a respectable Man, who thoroughly understands his business, a SITUATION as FOREMAN in a BRICKFIELD, or would take it by contract. First-rate references can be given. Address, A. B. Mr. London's, Burrough-place, Hendon, Middlesex.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION as CLERK of WORKS, or GENERAL FOREMAN, by a competent person, practically acquainted with the general routine of a builder's business. Can undertake the management of steam engines, sawing, and other machinery No objection to the country or to go abroad. Address, A. B. Office of "The Builder."

TO BUILDERS, &c.

WANTED, by a steady active young Man, aged 26, a SITUATION as CARPENTER. Has a knowledge of drawing, measuring, and taking out quantities. Good reference Address, G T. P. 46, St Paul-street, New North-road, Islington, London.

TO BUILDERS SAW-MILL PROPRIETORS, &c.

WANTED, by the Advertiser, who is a Joiner by trade, a SITUATION as Chalk-line or General Foreman, Superintendent of Saw mills, or any similar employment, he having just left a saw mill, where he has been employed as foreman nearly two years and is the owner of which he can refer. No objection to the country.—Direct to J. C. 13, Thornhill-place, Caledonian-road, King's-cross.

TO PROPRIETORS OF SAW MILLS OR BUILDERS.

WANTED, a SITUATION as SAW SHARPENER, or FRAME WORKER, or BENCH-MAN. Seven years' character. Town or country. Direct, C. Z. 31, Exeter-street, Lisson-grove, Marylebone.

TO BRICKLAYERS, MASONS, CARPENTERS, AND PLASTERERS

WANTED, any of the above Trades to take one or more Carcases, and work out the same, either labour only, or labour and materials. Apply to Mr. HUNT, 7, Stratford-place, Camden-town.

TO BUILDERS, DECORATORS, AND OTHERS

CRYSTAL PALACE GENERAL ARRANGEMENTS.—The Palace is opened on Mondays at 9 a.m. and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charge for admission is One Shilling. It is opened on Saturdays at noon, on which day the charge for admission is Five Shillings.

SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-day as follows, at 7 10, 8 10, 9 10, 9 40, 10 10, 10 40, 11 10, 11 40 a.m. and 12 10, 12 40, 1 10, 1 40, 2 10, 2 40, 3 10, 3 40, 4 10, 4 40, 5 10, 5 40, 6 10, 6 40 p.m.; returning from the Crystal Palace at 11 30, 11 50 a.m. and 12 30, 1 0, 1 30, 2 0, 2 30, 3 0, 3 30, 4 0, 4 30, 5 0, 5 30, 6 0, 6 30, 7 0, 7 30, 8 0, 8 30 p.m.; and further additional trains will run whenever the traffic renders it necessary.

The 7 10, 8 10 and 9 10 a.m. Down Trains, and the 4 30, 5 30, 6 30, and 8 30 p.m. Up Trains call at New Cross and Forest-hill. The Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London bridge, at least every ten minutes during the day, and at those hours, when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at those piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	.....	First Class, 2s. 6d.
"	.....	Second Class, 2s. 0d.
"	.....	Third Class, 1s. 6d.
Saturdays	.....	First Class, 7s. 6d.
"	.....	Second Class, 5s. 6d.
"	.....	Third Class, 6s. 0d.

In order to afford every facility to the public, and to prevent any delay at London-bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.

Fares between London-bridge and the Crystal Palace Station, not including admission to the Palace:—

Single Tickets	.....	First Class, 1s. 3d.
"	.....	Second Class, 1s. 0d.
"	.....	Third Class, 0s. 9d.
Return Tickets	.....	First Class, 2s. 0d.
"	.....	Second Class, 1s. 6d.
"	.....	Third Class, 1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 45, Regent-circus, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d each These tickets can only be issued upon production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London-bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with the necessary silver.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by rail, 4l. 4s. each; without conveyance by railway, 2l. 2s. the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August, 1854.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 5 to 19 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purpose it is supplied in squares of all sizes, from 5 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES GILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

DESIGNS FOR CENTRE-PANES, ON OBSCURED OR RICHLY-COLOURED GLASS, MAY BE HAD GRATIS, POST-FREE.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

87, BISHOPSGATE-STREET WITHOUT, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT,

Trinidad Asphalte Works, Rotherithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Deves Haytor Wharf, Rotherithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—

Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, PODMORE'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

PATENT PLATE, Rough Plate, Sheet,

Crown, and Ornamental Window Glass.—JOSEPH POULSON, of 164, Edgware-road, takes this opportunity of informing the trade and builders that having a very large stock of all the above on hand, he is prepared to supply any quantity, as low, if not lower, than any house in London, especially Patent Plate.—J. P. refrains from the impolitic practice of publishing the prices, in justice to the trade, whose interests he wishes to consult.—Sheet Lead, Pipe, White Lead, Oils, and Colours, Wholesale and Retail.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish. ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—

These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOUS, Crispin-street, Spitalfields, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE.

28, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

GOOD 3rds 16oz. FOREIGN GLASS in cases of 200 feet each, average size 40 by 30, at 42s. per case; 4ths, ditto ditto, 34s. Also 16oz. ground ditto ditto, 4d. per foot; crown and 16oz. sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 20d. per foot; ¼-inch rough British plate tiles, 11s. per doz. Also crown and sheet glass in crates; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead pipe, white lead, oils, turpentine, colours, &c.—G. FAIRMILOE and SON, 118, 86, John-street, West Smithfield, London.

HENRY PASK, Baker-street, Clerkenwell,

Sash, Shop Front and Door Maker to the Trade,

begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

J. MILLS (late Shop Foreman to Messrs Lawrence and Sons), JOINER to the TRADE, 7, Princes street, Stamford street, Lambeth. Shop-fronts, fittings, staircases, &c. PATENT SOLID SEWAGE MANURE

COMPANY, incorporated by Acts of Parliament, 1852 and 1854.

For Purifying Sewage and other Feculent Waters, without exposure to the atmosphere.

For Fixing and Precipitating their Ammonia, Salts, and other Fertilizing Matters; and

For condensing all the Fertilizing Ingredients into a solid manure.

Effected by one continuous operation under covered sheds!

The Directors are prepared to grant LICENCES to Town Councils, Local Companies, Engineers, and others, for the application in particular districts of the Company's Patent processes under their four existing Patents with all future improvements.

The complete efficiency of the processes has been proved on a large scale at Leicester, and the extensive permanent Works of the Company for purifying all the Sewage of that Borough containing a population of between 60,000 and 70,000, are now approaching completion, and will be in operation in the course of a few months.

By the Company's Act of the present Session, all Town Councils, Commissioners, and other Public Functionaries are empowered to enter into contracts with the Company without obtaining a special Act for the purpose.

Information as to terms of licences may be obtained on application to the Company's Solicitors, Messrs. WILSON and BISTOW, 1, Copthall-buildings, London; or to the Secretary, THOMAS PHIPPS, Esq. 45, Cornhill, London.

By order of the Board,

London, July 17, 1854. THOS. PHIPPS, Secretary.

FLOUR and OATMEAL MILLS.—For

SALE, the MACHINERY and APPARATUS, constituting flour and oatmeal mills, including pair of French burr stones, 4 feet diameter, and pair of grey stones, 4 feet 6 inches diameter, and all the shafting, gearing, &c. necessary for transmitting movement to the millstones, the various machines, and plans of proposed building, showing the arrangement of the machinery. These mills were constructed to order for the colonies and are ready for shipment. They are fitted up with great care, and very complete. Price will be about £300. Apply by letter only, prepaid, to M. J. care of Mr. Miller, Stationer, Bridge-road, Lambeth.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compound as that might be sold at cheap rates as Pure Powder of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior instead of a very superior paint, and the economy realized by the purchase of such articles becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO Wholesale Agents, 62, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs LAWFORD and Co. of 40, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. In Leeds, by Messrs. RANDERSON and CO Timber-hush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Ipswich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Patent. Manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evident, in almost all cases, by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That the imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-sixth part the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s 6d and 9s each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 1s 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 8s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this unoxious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale and retail, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT.—

FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Dark Cement, at their Works, situate near Bridgewater and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPS N and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 20th, 1854.

6, South Wharf, Paddington.

PORTLAND CEMENT.—

CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack, combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put for th by those who have hitherto had the monopoly. Manufactured by it. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Usher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply the same, which is of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for buildin purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Steel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in cementitious properties: that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers. JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground render it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster. London Agents—Messrs J. and G WALLIS, 64, Long-acre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dub in.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

ENCAUSTIC TILE PAVEMENTS. MAW and CO. BENTHALL WORKS, BROSELEY, Salop, manufacturers of the Cloister Pavement of Mediæval Court, and

THE SUCCESSFUL IMITATION OF OPY'S ALEXANDRINE

in the beautiful ENCAUSTIC TILE PAVEMENT of CLOISTERS of BYZANTINE COURT, Crystal Palace. M. D. Wyatt, Esq., in "Metal" "Hand-Book"), forward without charge, designs and estimates adapted to any given dimensions of Entrance-halls, Conservatories, Verandahs, &c. in every style.

Specimens at 11, Aldersgate-street, London.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 33s. per 1,000. Floor Bricks and 6 inch Pavings, at 40s. per 1,000; 8inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickers, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. Thus Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO BUILDERS AND OTHERS.

TO BE SOLD Cheap, 200,000 superior STOCK BRICKS, lying at the Paddington Old Station, Great Western Railway—Inquire on the premises, or of W. BROOKER, Rodney-buildings, New Kent-road.

BRICKS.—WANTED, 150,000 BRICKS, 110,000 HARD STOCKS, and 40,000 good PLACE, to be delivered at the Kensington Basin.—Address, Mr. F. W. DURRANT, Holland-place, Kensington, stating lowest cash price, and where to be seen.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr Benjamin Gough), 37, Newington-Crescent, Newington-butts.

STONE-COLOUR BRICKS, moulded to any pattern, for cornices, copings, labels, &c. at about one-third the cost of stone; also ornamental ridge and other tiles; may be had to order of Messrs. HOOPER and CO. 2, Portland-street, Southampton. Illustrated list of prices or samples forwarded on application.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 30s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corn-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c &c at the cheapest rate.—Chief Office, 27, Regent-street.

TO BUILDERS, CONTRACTORS AND OTHERS.

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BARSTALL'S PATENT Apply to JOHN A. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

TO BRICKMAKERS.

THE LONDON PATENT BRICK COMPANY (Burstall's Patent) are now prepared to enter into arrangements for the USE of the MACHINES in the London district. The chief advantages of these machines (which may be seen in full operation at the Company's works are, the superior quality and economy of manufacture, the bricks (produced from dry clay) are conveyed at once from the machine to the kiln, and are ready for delivery in fourteen days after they are made, thus avoiding all the usual damage, delays, and expensive process of drying, &c; the machinery and buildings occupy a very small space.—Terms and further particulars may be had on application to J. A. DUFF, at the Company's Offices, 8, Old Jewry.

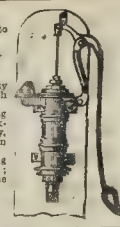
O. McCARTHY, Carman and Contractor, Whitefriars Wharf, Whitefriars, Fleet street, City.—Sand from above or below bridge, delivered by the yard, or per barge. Ballast, screened or unscreened, do. do. Stocks, lime, old bricks, and cement. Scaffolding and tarpaulings on hire. Rubbish may be shot in barges alongside at a small charge to customers, and likewise delivered in the Thames or Canal.—N.B. Goods lightered, landed, and carted. Best coals, per ton. Gas coke, per chaldron.

LADDERS, BARROWS, &c. for SALE or HIRE. G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges. Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'



PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slides and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, for all machinery, and fitted in the best possible manner, suitable for excavators, road, brickmakers, farms, gardens, sewers, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Land or mine pumps for sewers.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails, 55s. per doz painted
Ditto . . 48s. per doz galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper makers, Brewers, Manufacturers, and all who may have water, or other liquids to raise, will find it their interest to use these Pumps, for ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shoes, and all the fittings complete for running at once. Several are ready for delivery, from six horse power to twenty-five-horse power, and can be forwarded to any railway station. May be hired on a rental, or purchased, and can be seen at work at Messrs. MERCHWIN and HALLS', Engineers and Portable Engine Makers, Bluckfriars-road. These engines have been successfully employed for years.

STEAM-ENGINE.—FOR SALE, a four-horse power upright Condensing Engine, well finished.—Apply to S. TAYLER, Battersea.

TO ENGINEERS, ENGINEERS, AND MANUFACTURERS.

TO BE SOLD, a Capital LOW-PRESSURE CONDENSING STEAM-ENGINE of 24-Horse Power, with the Boiler, Shafting, Pulleys, and Gearing, and Plumbing Materials complete for fitting; timber and irons; the whole in good working order, and can be seen at work, and every information respecting it given by applying to C. E. Post-office, Queen-street, Richmond.

PAPER-HANGINGS.—R. HORNE, PAPER-HANGING MANUFACTURER, 41, Berners-street, Oxford-street, respectfully solicits the trade to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by the application of improved machinery, he is enabled to offer at the following prices, for cash only, viz.:—

Stout ceiling paper	5d.
Satin or Lincrusta	6d. and 7d.
Best-room papers, in great variety	at 5d.
An excellent oak paper	at 8d.
Rich gold and embossed grounds	7d. to 9d.
Flock borders, &c.	9d. to 1s. 6d.
Gold cornices	1s. 6d. to 3s. 6d.
Flock ditto	2s. 6d. to 3s. 6d.
Hall and staircase	9d. to 1s. 6d.

Per Piece.

Every description of French and English panelled decoration always on hand. Incorrect imitation of fancy woods.

N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched in any quantity on receipt of a remittance to the amount required given.

PAPER-HANGINGS.—The CHEAPEST Retail Stock in London for every description of PAPER-HANGINGS is at WM. SIMS' WHOLESALE WAREHOUSE, 22, GREAT DARTMOUTH-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment on the premises, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

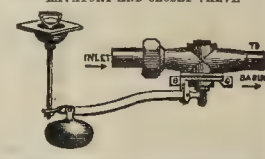
GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853.—In answer to your inquiries respecting the gutta percha tubing for pump suction, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker" N.B. The Company's Illustrated Circulars contain full instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
M medium	B B B B ditto ditto.



Sold by all the principal Stationers in town or country.

BATHS, PUMPS, and CLOSETS.—Baths, Deep Well and House Pumps, and Waterclosets of superior construction, efficiently and economically fixed in town and country by J. JACKSON, Plumber, 91, Broad-street, Golden-square.—Patentee of the Combination Bath.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "SLOCAN'S Registered Non-Return Water-closet." This water-closet is the most simple and efficient yet introduced for such services, and for having without the usual service box, cistern-work, &c. From its construction all possibility of external leakage is prevented. A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

MILL WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

PATTEN'S PATENT HIGH-PRESSURE WATER CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main. Also PATTEN'S Improved Powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen at the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St. Paul's, London.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK, MANUFACTURER OF GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c. 65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2 FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

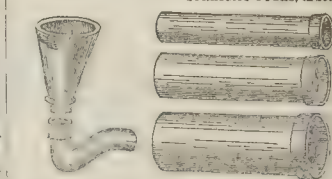
DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

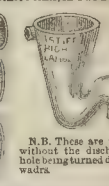
HENRY DOULTON and CO.'S DRAIN PIPES in GLAZED STONE WARE

OFFICES—HIGH-STREET, LAMBETH, LONDON, and Granville-street Wharf, Broad-street, Birmingham
MANUFACTORIES—HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

May also be had as follows:—



BIRMINGHAM	Granville-street Wharf.	WOLVERHAMPTON	Mr. R. Shelton.
GLOUCESTER	Mr. Jesse Sessions.	TAUNTON	Mr. Geo. Pollard.
NORTHAMPTON	Messrs. Adnitt and Greenough.	STRATFORD-ON-AVON	Messrs. J. C. and Son.
WORCESTER	Messrs. Rowland and Son.	JERSEY	Mr. John Le Cras, Charing-cross.
CHENTRY	Mr. J. Alcott.	WARWICK	Mr. C. Season, Kinsome Mills Wharf.
CHELTENHAM	Mr. J. Blizard.	DERBY	Mr. George Brown, London-road.
LEAMINGTON	Mr. Cramp, Warwick-street.	BATH	Mr. Wm. Davey, Broad Quay.
LEICESTER	Messrs. J. and W. Jackson.	NORWICH	Mr. J. Morris, King-street.
SALISBURY	Messrs. Osmond and Son.	CARDIFF	Messrs. James and Price.

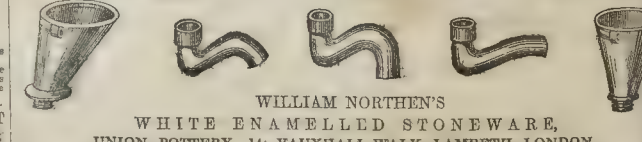


STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 29, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.



N.B. These are made without the discharge-hole being turned downwadra

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, chicelety, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pellatt's-acre, Westminster-bridge, City-road Wharf, City Basin; Duke-street, Borough-bridge; Dunn's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Bryden-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

THE SUPERIORITY OF JENNINGS'S CLOSETS ARE NOW GENERALLY ACKNOWLEDGED.

THEY ARE TO BE FOUND IN NEARLY EVERY HOSPITAL, ASYLUM, AND UNION THROUGHOUT THE UNITED KINGDOM.

They are IMPERISHABLE in their material, free from all complication, save the Lead trap, displace no impure air, are as easily understood and fixed as a Cock to a sink, are cleaner and more efficient than any closet before the public.

As a proof of their efficiency one fact will suffice. Nearly three years since THIRTY-SIX of these Closets were fixed in GUY'S HOSPITAL, since then TWENTY more have been introduced, and the Inspection has been so satisfactory, that H. CURRY, Esq. the Architect to ST. THOMAS'S HOSPITAL, has just introduced them throughout that building, as also JENNINGS'S LAVATORIES, URINALS, &c.

THE ROYAL APARTMENTS OF THE CRYSTAL PALACE ARE FITTED WITH THESE CLOSETS,

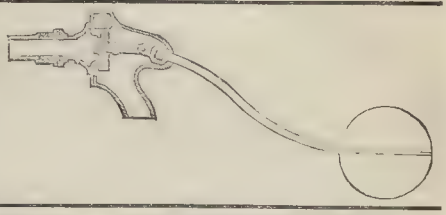
And Architects will find on inspection that they are fit for the MANSION or COTTAGE.

To prevent Cholera and Fever, all Drains should be properly trapped.

JENNINGS'S TRAPS

Will be found to work without stopping up, and the removal of the grating does not affect the principle of the Trap.

JENNINGS'S PATENT SHOP-SHUTTER SHOES SHOE AND SECURE SHOP SHUTTERS AT HALF THE COST OF THE TROUBLESOME AND DESTRUCTIVE SHUTTER-BAR.



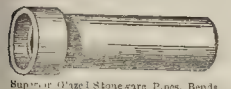
A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

G. JENNINGS solicits an inspection of his

NEW DRAIN-PIPES AND CONNECTIONS.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.



These Ball valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of stuffing-box, spindles, slides, and cylinder fittings, so fatal to Ball valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of closing against the column of water when most required, and are warranted to stand any known pressure of water

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The FIFTH of a COURSE of LECTURES, chiefly designed for the benefit of Art-Workmen, will be delivered at the ROOMS of the Museum, on MONDAY, SEPTEMBER 18th, 1854, "On Sepulchral and Monumental Art," by the Rev. CHARLES BOUTELL, M.A.

Hour of admission, SEVEN o'clock. The Chair to be taken at EIGHT o'clock.

Cards of invitation will be presented on application at the Museum, on any day excepting Saturday, from Ten to Four.

HENRY CLUTTON, Hon. Sec.

The entrance to the Museum on the above evening, will be from the Archway in Parliament-street, near Hudson's terrace.

INSTRUCTION in ART.—The AUTUMN SESSION of the NORMAL TRAINING SCHOOL of ART of the Board of Trade, Department of Science and Art, will COMMENCE on 1st OCTOBER, 1854.

Art Superintendent—RICHARD REDGRAVE, R.A.

The course of instruction imparts systematically a knowledge of the science and principles involved in art, especially in instruction to the medical profession of life, with the view of training students for teaching schools of art, and preparing students to enter upon the future practice of decorative art in manufactures and works of taste, either as masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to put to such use the study without reference to a preparation for any special branch of industry. Special classes are also arranged for female students of paper chamber and other schools to teach plane tint drawing as a part of general education concurrently with writing.

For prospectus, terms of admission, &c. apply at the Offices, Marlborough House, Pall-mall, London.

COMPETITIONS.

CITY of ELY.—DESIGNS for NEW BURIAL GROUND CHAPELS.—NOTICE is HEREBY GIVEN that the time for agreeing to the Designs for the above Chapels has been extended to FRIDAY, the 6th of OCTOBER instead of the 8th, as advertised in last week's AND FURTHER that the Burial Board will require Working Drawings and Specifications but only a Design and Estimate. The Board does not pledge itself to employ the Architect whose Design shall be selected. By order of the Board, W. MARSHALL, Clerk.

Ely, August 30th, 1854.

WIDENING of BIDEFORD BRIDGE.—The TIME for the delivery of the Designs and Estimates is EXTENDED to the 31st OCTOBER; and it is requested that the designs and plans may be drawn on the scale of 8 feet to the inch.—By letter, 3rd August, 1854.

BIDEFORD BRIDGE.—A Plan, Elevation, and section of Roadway of this Bridge, together with particulars collected on the spot, may be obtained by forwarding two guineas (post office order) to Mr. SAMUEL PURCHES, C.E. Worcester.

CONTRACTS.

LEEDS SEWERS.—To BRICKLAYERS, MASONS, and GENERAL CONTRACTORS. The Council of the Borough of Leeds are prepared to receive TENDERS or PROPOSALS for the EXCAVATING, BUILDING, and COMPLETING of several miles in length of the principal BRANCH SEWERS, for the more effectual drainage of the district of Leeds, Hunslet, and Holbeck, within the said borough. Plans and specifications may be seen, and further information may be had, on and after THURSDAY, the 24th AUGUST, on application to Mr J. W. LEATHER, Civil Engineer, Leeds, and a draft of the contract for which to be entered into may be seen at the Town Clerk's office, Leeds. Tenders or proposals to be delivered, sealed up, at the Town Clerk's Office before ELEVEN o'clock in the morning of FRIDAY, the 15th SEPTEMBER 1854. The council do not pledge themselves to accept the lowest Tender.—By order.

JOHN ARTHUR IKIN,
Town Clerk and Clerk of the Council.

Town Clerk's Office, Leeds, 11th August, 1854.

BOROUGH of DERBY.—COVERING BROOK COURSES and SEWERAGE WORKS. TENDERS WANTED.

The Local Board of Health of this Borough are prepared to receive TENDERS for the execution of the following WORKS, which will be let in One Contract, viz:—

Covering over and Converting into BRICK SEWERS, Two Open Brook Courses in Derby, known as the Littleover Brook and the Bramble Brook, the proximate length required to be enclosed being about 1,270 yards. Also,

Constructing certain BRICK and PIPE SEWERS along the Osmaston-road and Street, London-road and Street, Coalstreet, Ashbourne-road, Friargate, and Market-place and Street, in the said Borough, the gross or total length of the Sewers being about 2,500 yards of Brick, and 420 of Pipe Sewers.

Where Pipe Sewers are required to be of Glazed Stoneware Pipes, such materials and be provided by the Board.

Parties tendering must not only state in one sum the amount for which they will execute the above-mentioned works, but also furnish (according to a prescribed form of Tender, to be had on application) a schedule of prices at which they will execute any additional works for Street or House Drainage, if necessary, connected with the above.

Plans, sections, specification, and form of Tender, will lie for inspection at the Office of the Local Board, Derwent-street, on and after FRIDAY, the 1st of SEPTEMBER, and further information may be obtained on application to Mr. THORBURN, the Surveyor.

Tenders, sealed and endorsed, "Sewerage Works," addressed to the Clerk of the Board, must be received on or before MONDAY the 18th day of SEPTEMBER next.

The lowest or any tender, will not necessarily be accepted.

By order. JOSEPH JONES,
Derby, Aug. 24th, 1854. Clerk to the Board.

BRISTOL LOCAL BOARD of HEALTH. TO BUILDERS, CONTRACTORS, AND OTHERS.

The Committee of the Bristol Local Board of Health here give Notice, that they are ready to receive TENDERS from Parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, certain intended BRICK SEWERS, as follows viz:

CONTRACT No. 1.—Main Sewer, from Cotham-lane into the River Avon, about 2,650 yards in length.

CONTRACT No. 2.—Main Branch Sewer, along the White Ladies-road, north and south, about 810 yards in length.

CONTRACT No. 3.—Main Branch Sewer, in Richmond Park-road, about 2,365 yards in length.

CONTRACT No. 4.—Main Branch Sewer, for Cotham and Kingsdown, about 2,508 yards in length.

Any person or persons willing to engage for making any, or either, or all of the before-named sewers, are requested to deliver separate Tenders for each of the said Contracts at the Offices of the Local Board of Health, No. 13, Prince-street, on THURSDAY morning, the 28th day of SEPTEMBER next, at ELEVEN o'clock precisely, when the Committee will meet to determine upon the same.

Plans, sections, and specifications of the works to be done, may be seen at the Offices of the Local Board of Health, No. 13, Prince street, Bristol, and all further information may be obtained either on personal application, or by letter, post paid, addressed to the surveyor, Mr. HENRY ROBERT ANDREAE, C.E.

The parties tendering will be required to give the names of two responsible persons willing to become sureties for the due performance of the works.

The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until the proposed sureties are approved.

By order of the Committee,
JAMES HARRIS, Clerk.

Local Board of Health Offices, 13, Prince-street, Bristol, 24th August, 1854.

TO BUILDERS AND OTHERS

SEWER CONTRACT.—The Commissioners under "The Walsall Improvement and Market Act, 1854," are ready to receive TENDERS for the following SEWERS, which are intended to be put down in Walsall, namely, a main sewer commencing opposite the Stork Hotel, in Bridge-street, extending thence to and under the open space called the Bridge, at the lower part of Bridge-street, to and under the house now opposite the Turf Tavern, in the same street, the length being about 160 yards. The sections, specifications, and conditions of the same may be inspected at the office of Mr CLARK, Town Surveyor, Wolverhampton-road, Walsall. Parties are to send their tenders once a month if desired, sealed and delivered at the office of the Commissioners' Clerk, Bridge-street, Walsall by or before Two o'clock in the afternoon of MONDAY, the 2nd day of OCTOBER next. The Commissioners do not pledge themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to give security, with two sureties, for the due performance of the contract.

SAMUEL WILKINSON, Jun. Commissioners' Clerk.

Walsall, 5th September, 1854.

CONTRACTS.

TO DUST CONTRACTORS.

CHELSEA IMPROVEMENT ACT.—The Commissioners for Paving, Lighting, Cleansing, Regulating and Improving the Parish of St. Luke, Chelsea (exclusive of the District of Hans-town), will meet in the Board-room at the Manor house, Kings-road, Chelsea, on TUESDAY, the 12th inst. at ELEVEN o'clock in the forenoon precisely, to receive TENDERS from persons willing to CONTRACT for a period of one year, from Michaelmas-day next, pursuant to the terms of a draft contract now open at the Office of the Surveyor to the Commissioners, for COLLECTING and REMOVING the DUST, ASHES, and RUBBISH which are to be the property of the Contractor, from the several houses in the streets and places under the jurisdiction of the Commissioners. Tenders per cubic yard or a sum of the sum offered is to be paid on the acceptance of the Tender, and a further sum to make up a moiety of the sum offered to be paid at the time of signing the contract within three days after, and the remaining moiety on the 25th of MARCH next. Sealed Tenders, endorsed "Tender for Dust and Ashes," and signed by the proposed contractor, with the names and descriptions of two sufficient sureties for the due performance of his contract, are to be left at the Office of the Clerk to the Commissioners, Manor-house, Kings-road, and not elsewhere, on or before the 11th inst.; but the Commissioners do not bind themselves to the acceptance of the lowest or any of the Tenders so delivered. The legal charges for the contract to be paid by the contractor; and the parties tendering must appear personally on the day the Tenders are opened, if not forms of Tender (to be filled up) may be obtained at my Office, and no others will be received or accepted.

By order of the Board,
JOSEPH PATTESON, Surveyor to the Commissioners,
5, Beaufort-terrace, King's-road, Chelsea.

Dated this 5th day of September, 1854.

TO PLUMBERS, PAINTERS, &c.

CHELSEA IMPROVEMENT ACT.—The Commissioners for Paving, Lighting, Cleansing, Regulating and Improving the Parish of St. Luke, Chelsea (exclusive of the District of Hans-town), will meet in the Board-room at the Manor house, Kings-road, Chelsea, on TUESDAY, the 12th inst. at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT, for a period of one year, from Michaelmas-day next, pursuant to the terms of a draft contract, now lying at the Office of the Surveyor to the Commissioners, for supplying them with GOOD OILS, free from loam, for the repair of the roads within their jurisdiction, at per cubic yard, to be delivered alongside of the Fire Dock adjoining Hancock's Wharf, Cheyne-walk, Chelsea, in such quantities as may be ordered from time to time by the Commissioners, or their surveyor, and a sample of such fluid must be second drawn on view at the Surveyor's Office. Tenders for about 2,000 cubic yards, more or less. Sealed tenders, endorsed "Tender for Broken Flints," and signed by the parties tending with the names and description of two sufficient sureties to be approved of, for the due performance of the contract are to be left at the Office of the Clerk to the Commissioners, Manor-house, Kings-road, and not elsewhere, on or before the 11th inst.; but the Commissioners do not bind themselves to accept the lowest or any Tender for the contract to be paid by the contractor; and the parties tendering must appear personally on the day the Tenders are opened. Printed forms of Tender to be filled up) may be obtained at my Office, and no others will be received or accepted.

By order of the Board,
JOSEPH PATTESON, Surveyor,
5, Beaufort-terrace, King's-road, Chelsea.

Dated this 5th day of September, 1854.

NOTICE to BUILDERS.—Persons desirous of CONTRACTING for the erection of FIVE HOUSES, in BRICK LANE, OLD STREET, in the Parish of St. Luke, the Company of IRONMONGERS, may see the plans and specification at IRONMONGERS HALL, Fenchurch-street. To be conveyed to such parts of the parish as may be directed and there deposited in the situations as appointed. The Board's Surveyor, on or before the 27th day of NOVEMBER, 1854, and will be paid for within two months after the completion of the contract. Parties tendering must be in attendance and prepared to enter into a bond for the due performance of the contract. The board do not bind themselves to accept the lowest or any Tender. Further particulars may be obtained on application to Mr. JOHN BARNETT, Surveyor to the Local Board, William-street.

By order of the board,
EDWARD SARGENT, Clerk.

Town-hall, Woolwich, Sept. 6, 1854.

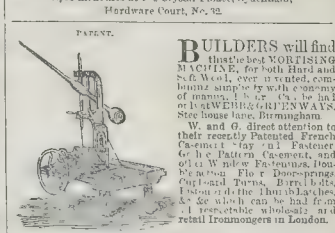
GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost or heat of summer, like metal or leather. Its strength is extraordinary; the small bar-inch diameter tubing has resisted a pressure of 60 lbs. on the square inch, with it bursting. The smaller sizes may be had in any feet, and the larger in 24 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in Hotels, &c. THE TRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

THE CRYSTAL PALACE FLOWER-BASKETS, as exhibited at Sydenham, made to the original and other elegant and new designs, by W. RICHARDS, at the Wire works, No. 326, Oxford-street, nearly opposite the Princess's Theatre. Wire work in all its useful and ornamental varieties, for the garden, green-house, conservatory, or drawing room; garden and game fencing. Aviaries and conservatories fitted up. Birdcages and cheese trays kept in stock. Window blinds and sunshades of every possible description, of the best materials and workmanship.

N.B. An allowance to nursery men and the trade.

HART AND SON,

83, 84, & 85, WYCH-STREET, and 21, DRURY-LANE.



Proprietors and Manufacturers of

PITT'S PATENT SPINDLED DOOR FURNITURE.

IN CHINA, GLASS, BUFFALO-HORN, CARD WOOD, &c.

Specimens also at the Crystal Palace, Sydenham,
and
Hardware Court, No. 32.

BUILDERS will find that the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combines simplicity with economy of manufacture, is to be had of HOLTZAPFFEL & DEYERLEIN, Steel House lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and Solid Wrought Fastenings, Iron Sash Pulleys, Door-springs, Cupboard Turns, Barrel bolts, Hasps and Staples, Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

TO IRONMONGERS, BUILDERS, GAS FITTERS, &c.

THE valuable STOCK of TOOLS, FIXTURES, &c. of an old established business TO BE SOLD in the North, at a great sacrifice under peculiar circumstances.—Apply to Mr. HEALY, Accountant and Auctioneer, Isle-of-Ely, London.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their latest method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

COPPERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, and to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

a complete LIST of which will be forwarded upon application.

FREDERICK GRAY,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 18, Gresham-street, LONDON.

CHANDELIERS.—The Chandelier and Gas-fittings Company, Manufacturers of Gas Chandeliers and Fittings, Brackets, Pendants, &c. Brass, copper, tin and composition tubes, iron tubes, and fittings, &c. &c. A large and well-assorted stock always on hand at 28, Le coster-square, London.

J. M. MOLE, Agent.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Chain and Anchors,
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Bisse-lane, London.

THOMAS EDINGTON, late of the Phœnix Iron Works, Glasgow, Iron Merchant, Contractor, Inspector of Railway Bars and Castings, Agent for Patents, &c. &c. Commission Agent. WANTED, AGENCIES for the Sale on Commission of English Boiler and Ship Plates, Angle and Rivet Iron, Tinned Plates, &c. &c. 17, GORDON-STREET, GLASGOW.

TO ENGINEERS, MACHINE-MAKERS, CONTRACTORS, &c.

WHEATLEY, KIRK, and CO. have on hand, and ready for delivery, a very large stock of quite new, and the best workmanship, of SHAPING and SCREW-CUTTING LATHES, Double-wheel Lathes, Drill-ing, Slotting, Shaping, and Planing Machines, Horizontal and Vertical Steam-engines, &c. &c. — Cross-street Chambers, Manchester.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for hanging, at one guinea the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
146, Strand, London.
67, Hope-park-street, Glasgow.
27, Dale street, Manchester.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE,
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

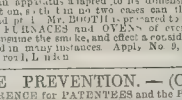
TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Bolted Brass for Engravers. Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Lonsdale, London.

BUILDERS, Carpenters, Cabinet-makers, and others are invited to inspect the SET OF NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY, of the lowest possible prices, at NAYLOR'S, the Patentee of Naylor's Warehouse, 265, Oxford-street, between North Audley-street and Park-street.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, and the Trade generally.



IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-place, Manchester-square, London, running out of Baker-street, Portman-square.

PATENT WARM-AIR FURNACE-STOVES of any power required, for Churches, Chapels, Halls, and other large Buildings, Dwelling-houses, &c. in the most economical manner, at the least cost as to consumption of fuel, the smallest space occupied by apparatus, are erected, and their efficiency guaranteed, by CUTLER and SONS, Stove Manufacturers, &c. 15, Great Queen-street, Long-acre.

TO RAILWAY CONTRACTORS, BUILDERS, IRON MANUFACTURERS, COLLIERY PROPRIETORS, &c.

FOR immediate SALE by PRIVATE CONTRACT, about 130 tons of temporary rails, 38 to 44 lbs. per line yard, 2-0 earth wagons, 2-0 harrows, 2-0 wood sleepers, 6 sets of wrought-iron fencings, 2 tons of iron, various sizes; also a small quantity of sheer and blister steel, 25 set of trace and cart harness, gig-duff and riding saddles, three iron bottomed large boiler, three sets of stable utensils, 4 tons of iron bolts, 2 feet 6 inches long by 1 inch diameter; 1 iron mortar crusher, 1 coil of 4-inch rope (new), 6 2-horse and 1 horse carts, several thousand feet of spruce and pine deals, 3 pumps, 4 lime screens, lot of quarry bars and tools, wheel barrows and rollers; 2 patent weighing machines, several sets of smiths' tools, office desks and fittings, together with a large quantity of miscellaneous railway plant. For prices and all other particulars, apply to Mr. CHAS. DENROCHE or Mr. W. T. WARREN Carmel.

CUT NAILS.

Established A.D. 1783.

1½, 1½ 6d.; 1½, 1¾, 2d.; 2, 2¼, 2½, 2¾, 3, 3½ per cwt.

HAYWARD, BROTHERS, IRONMONGERS,
196, BLACKFRIARS-ROAD.

TO ENGINEERS and CAPITALISTS with 6 and upwards.—A QUARTER SHARE of one of the largest and most eligible IRON WORKS in England, TO BE DISPOSED OF. The business having increased very extensively the last few years, both at home and abroad, causes the owners to dispose of same in the market. Upwards of £40 is turned over annually, and much more may be done with excellent profits, as a great portion of the business is secured by letters patent.—For further particulars apply by letter (prepaid), A. Z. Post-office, Bridge-street, Westminster; or BOX, 197, Post-office, Manchester.

SMOKE CONSUMING.—Mr. BOOTH, Civil Engineer, is desirous that the public should understand that, from an experience of more than twenty years' practice as a furnace engineer, he is in a position to prove that, for the purpose of consuming smoke effectually, each particular furnace will require an apparatus adapted to its dimensions and peculiar construction. In not less than two cases can the same plan be considered applicable. Mr. BOOTH is prepared to fit suitable FURNACES and FIRE-GRATES OVENS of every description, which will consume the smoke, and effect a considerable saving of fuel, as proved in many instances. Apply No. 9, Portland place, Wandsworth-road, London.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.) QUISE and Co. having several British and Foreign Patents for the above purposes, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An expert engineer (practical engineer) will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Softness of Zinc with the Durability and Cheapness of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those Atmospheric influences which so rapidly cause its corrosion; its thickness and weight

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about 14 oz per foot superficial.
No. 13 " " " 20 oz. do. do.
No. 14 " " " 24 oz. do. do.
No. 15 " " " 28 oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,
DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

STEAM ENGINES.

THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND

HAVE AWARDED THEIR £10 PRIZE TO WILLIAM DRAY AND CO.

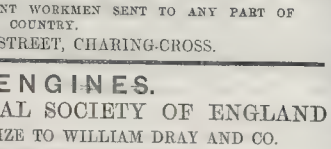
FOR THE BEST VERTICAL STEAM-ENGINE.

WILLIAM DRAY AND CO. ENGINEERS, &c. SWAN-LANE, UPPER THAMES-STREET, CITY.

IRON ROOFS, BRIDGES, HOUSES, and CAST IRON WORK, of every description, supplied and fixed complete by JOHN WALKER, Mill-wall, Poplar.
Offices, Arthur-street West, London-bridge, late 63, Gracechurch-street.
N.B. Builders and others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

THE PATENT GALVANIZED IRON.
TUPPER and CARR,
Owners of Crawhall's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Coping, &c. Wholesale, retail, and for export.
An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE,
ROAD-STREET and BERKLEY-STREET, BIRMINGHAM
LONDON OFFICE, 3, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING
WORKS, BIRMINGHAM.
PORTER (BROTHERS) AND STUART
(LATE JOHN H. PORTER).
IRON FOUNDERS, SMITHS, AND MANUFACTURERS
OF CORRUGATED IRON.

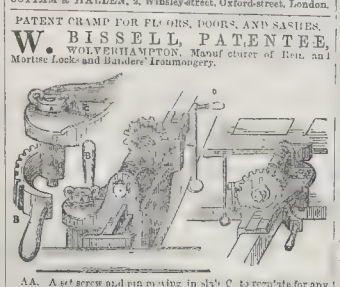


PATENT GALVANIZED IRON.
(IMPROVED PROCESS.)
JOHN SYMONDS and CO.
WORKS, GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks,
GALVANIZED SHEET-IRON and WIRE of every description, equal in all respects to that produced by any other process, THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Fencing, &c. Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-bank, Commercial-road, Limehouse, and at J. SKAIFE sup. has this Metal in every form, viz sheets, plain and corrugated, of all sizes and gauges. Wire of every gauge, and Wire Netting of all descriptions, Guttering, Cistern, Screws, Gas and Water pipes; Hoopers, Pastigs, Brace-pans, Baths, Buckets, &c. wholesale retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, &c. &c. kept ready Galvanized. Estimates and drawings given. Roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both plain and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Suitable Emigrants' Houses and Sub-Colonial Stores supplied at moderate prices, and on the shortest notice. An allowance to the trade.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Contractors, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them; that supply, in point of facility, cleanliness, quickness of construction, and cheapness. Drawings and estimates given and executed.
Island Foundry and Ironworks, Millwall, London

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, BORING WOOD or IRON. House and Cask Builders, Millers, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Millbank-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.



BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings are all the newest improvements, and are the only patented invention of this description.
Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Cans. 100 of this sample on Barking and Plaistow. Price 35s. each. JAMES BARTON, Iron Founder, Smith, &c. &c. Oxford-street, a few doors east of the Pantheon.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture as above. COTTAM & HALLEN, 2, Wimsley-street, Oxford-street, London.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON. Manufacturer of Iron and Mortise Locks and Builders' Ironmongery.

A A. A set screw and pin moving in slab C to regulate for any thickness of joist, from 4 to 14 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The inventor in making the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well and I fo doors and sashes as he ever fixed. From its great mechanical principle, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-street, City-road, London.—Contracts for Cast-iron Tanks, Gas Holders, Pumps, and all descriptions of Gas Apparatus. Gas works erected complete. And many hundreds of Cast-range and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, which invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc. Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Pat. at Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new regenerative Venetian Ventilator, so much admired &c. &c. &c.
J. H. BOOBBYER late STORCH and BOOBBYER, established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stalybope street, Carey-market, London.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, great utility, and perfect security, also Parnell's Patent Noiseless Escape and Strong Iron Fire-proof Safes, Deed and Cash Boxes, Copying and Letter Presses. The prices and lists of prices may be had at the Depôt, 52, Strand, gratis.
STREET-DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICK LOCKS, FIFTEEN SHILLINGS EACH

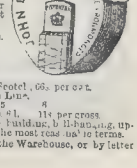
CHUBBS' LOCKS, FIRE PROOF SAFES, AND CASH BOXES

CHUBBS' PATENT DETECTOR LOCKS
give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose to which locks are applied, and are strong, secure, simple, and durable.
CHUBBS' PATENT LATCH, for front doors, counting house doors, &c. is simple, not liable to get out of order, low in price, and quite secure. The parts are perfectly free and work easily, &c. &c.
CHUBBS' PATENT FIRE PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the fiercest heat, and are consequently secure from fire, and are also perfectly secure from the attacks of the most skilful burglar.
CHUBBS' CASH and DEED BOXES fitted with the Detector Locks
CHUBB and SON, 57, St. Paul's Churchyard, London.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. All cast-iron pipes for gas, water, or drainage; bends, trees, &c., flange and hot-water pipes, with all the usual connections; lamp-posts and rebots, stable fittings, troughs, &c. &c.
J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

NEW HOUSES OF PARLIAMENT.—DEFRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. an hour. A warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEFRIE'S celebrated DRY GAS METERS, upwards of 60,000 in use.—See testimonies at the Office, 143, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA. HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, public offices, and other buildings, to the execution of which they pay great attention, beg to call particular attention to the specimen at the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming such large buildings as those of the new Houses of Parliament, being free from all objections, economical in working, and promotes perfect ventilation, with a healthy, genial warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.



STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER and ZINC DIAPHRAGM PROVED CONICAL IRON BOILERS and CONSERVATORY and HOUSE HEATING APPARATUS, in which they have had the honour to be employed by the Royal Family, and most of the nobility and gentry, and in numerous other instances all over the country, of warming hot-houses, and other buildings, by Water from the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 200,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 100 lbs. of coal per hour. The most complete safety against fire, the healthiest and most economical ventilation, without any machinery, are those for BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, hot-houses, and green houses. The Calorifere has been put in by Grace the Duke of Bedford, at Woburn Abbey by several workmen, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 55, King William-street, City.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY, at PEILL and STEVALLS, Nos. 8 and 9, CHICHESTER-BUILDINGS, BLOOMSBURY. The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Lift Stoves, double locks, 3d. per inch, and upwards.
Register Stoves, 8d. 6d. 7d. 8d. and 9d per inch.
Self-acting Registers, with circular grates and back boilers, best wrought bars and bright fittings.—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.
3 feet Coffee Ranges, with oven and back boilers, complete, 5l. 5s.
3-feet self-acting ditto, ditto, complete
Air Registers, 4s. per 12
Best Two-Line Pots, Ditto, Scotch, 6s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per cross

And every article required in the building, bell-hanging, upholstery, and brass work, on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

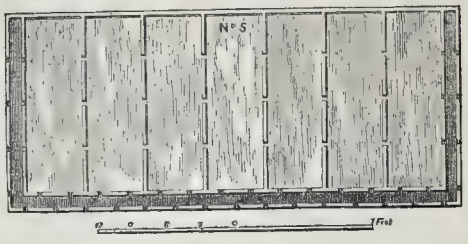
TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's surveyor, at



No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

HAYWARD'S IMPROVED

COAL-HOLE PLATES.

ILLUMINATING GRATINGS.

PAVEMENT LIGHTS.

COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each.

N B The Flange A prevents them from shifting when trodden on or being forced up.

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

MANUFACTORY: 5, JERMYN-STREET, REGENT-STREET, LONDON.

SOLE LONDON AGENT for NICHOLSON'S COTTAGER'S RANGES, ANGLO-GERMAN COOKING-STOVE, &c.

WIRE STRAND FENCING as furnished with all its fittings, by R. S NEWALL and CO, having elicited the unqualified approval of practical men, confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced This fence, as fitted by R. Newall and Co (after the model of the fences of this material the Slopes and Home-park, at Windsor), has the inherent property of remaining equally tight and rigid, under any variations of temperature,

N.B. Estimates given at so much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

Pumps and machinery for raising water from deep wells, boring tools, and well pipes, for exportation. Men and tools supplied to bore for railroads, minerals, &c.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

FOREIGN WINDOW-GLASS.—Consumers of Sheet Glass are informed the above is the best manufactured, and also that HICKSONS', 46, LONG ACRE, is the cheapest warehouse for it, as the following prices will show, and quality always to be depended upon (Terms, cash): 100 feet boxes, averaging 18 oz.—size, 14 by 10, 14 by 11, and 15 by 11, &c. 14s. 6d.; 200 feet cases, averaging 18 oz.—size, 40 by 30, and 42 by 32, 42s.; 200 feet cases, averaging 16 oz. size, 40 by 30, and 42 by 32, 40s. 3rds, 32s.; 150 feet cases, averaging 21 oz.—size, 40 by 30, and 42 by 32, 3rds, 38s.; Ground, averaging 16 oz. 3l. and 3l.

DECORATIVE PAINTING OF CHURCHES, MANSIONS, CLUBS, PUBLIC BUILDINGS, &c.
in the most correct style of Art, from Designs, and under the direction of H. TAYLOR BULMER, Esq. of 58, Pall-mall, London, and Sheffield, whose works may be seen at St. Barnabas Church, Pimlico; St. Mary's, Farm-street, Berkeley-square, London; the great Hall of the Sheffield Mechanics' Institute; the Council Hall, and numerous others in town and country; also the Decorations executed by him in the English, French, and German Mediæval Courts, Crystal Palace, Sydenham.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner. Address, Mr. BOYS, 32, Albany-street, Regent's-park.

CRYSTAL PALACE.—DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and KUCKUCK, Artistic Decorators to his Majesty the King of Hanover, have executed the Painting of the Dome, the Ceiling, the Frieze in the Renaissance, and the centre portion of the Italian Courts, Crystal Palace, Sydenham, most respectfully beg to inform the nobility and gentry that they have removed from 201, Piccadilly, and have considerably increased their establishment.—Address, BEENSEN and KUCKUCK, 58, Pall-mall, London.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

In fcp. 8vo. with woodcuts, price 7s. 6d. cloth,
PROFESSOR BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY, as APPLIED to MANUFACTURES, including Dyeing, Bleaching, Calico-printing, Sugar manufacture, the Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution.
Arranged by permission from the Lecturer's Notes by
J. SCOFFERN, M.B.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Now ready, in fcap. 8vo. with woodcuts, price 7s.
LECTURES on POLARISED LIGHT, together with a Lecture on the Microscope, delivered before the Pharmaceutical Society of Great Britain, and at the Medical School of the London Hospital.
By the late JONATHAN PEREIRA, M.D. F.R.S. &c.
Second Edition, greatly enlarged from Materials left by the Author.
Edited by the Rev. BADEN POWELL, M.A. V.P.R.S.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

MR. MACAULAY'S ESSAYS (People's Edition).—Now complete, in 2 vols. crown 8vo. price 6s. each, cloth; or in Seven Parts, price 1s. each.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

DEDICATED TO THE LORD CHANCELLOR.
A PRACTICAL TREATISE on the RIGHT and COST of REDEEMING PROPERTY mortgaged to Benefit Building Societies and Freehold Land Societies.
Price 5s.
By J. H. JAMES, of the Middle Temple, Esq. Barrister-at-Law.
Also, by the same Author,
A PRACTICAL APPLICATION of the JOINT STOCK COMPANIES' ACTS to ASSURANCE SOCIETIES.
Price 2s.
A TREATISE on LIFE and FIRE ASSURANCES, ANNUITIES, and REVERSIONARY PAYMENTS.
Price 15s.
A GUIDE to the FORMATION of FRIENDLY SOCIETIES. Price 8s.
A GUIDE to BUILDING SOCIETIES and FREEHOLD LAND SOCIETIES. Price 2s. 6d.
MODERN ASSURANCE COMPANIES VINDICATED; being a Review of the late Controversy, and of the Select Committee of the House of Commons. Price 6d.
London: BUTTERWORTHS, 7, Fleet-street, and sold by SIMPKIN, MARSHALL, and CO. Stationers'-court.

Now ready, One Hundred Woodcuts and Ten Plates, price 5s.
AN ESSAY on CHURCH FURNITURE and DECORATION; forming a Manual of Archæology and a Guide to the Restoration of the Interior Decoration and Furniture of Churches.
By the Rev. EDWARD L. CUTTS, B.A.
JOHN CROCKFORD, 29, Essex-street, Strand.

FOUNDATIONS OF HOUSES.
THE PRACTICAL MECHANIC'S JOURNAL. Part 78, September. 1s. Illustrated by 6 large Plate Engravings of Harman's Direct Acting Screw Engine, and Thirty Woodcuts. Articles upon Boiler Explosions, Education; the Laws as to Patents in Saxony; Harman's Direct Acting Screw Engines; Notes on Lime; Submarine Electric Telegraph between Europe and America; American Notes, by our own Correspondent; The Crystal Palace, Specifications of new Patents, Printing Surfaces, Graham; Railway Wheels, Morrison; Railway Brakes, Johnson; Grain Mills, Johnson; Pistons, Hinchcliffe; Zincographic Printing Machine, Reid; Dyeing, Johnson; Safety Floating Dress, Johnson; Foundations of Houses, Bird; Steam-jointed Clay Still, Lister; Railway and Alarm Signals, Norton; Reviews of Books; Proceedings of Societies; Monthly Notes; Law Reports in Patents and Designs; Lists of all new Patents.
London, G. HEBERT, 88, Cheapside. Editor's Offices (Offices for Patents and Designs), 47, Lincoln's Inn-Fields, London, and 1, Buchanan-street, Glasgow.

OFFICIAL GUIDEBOOK to the CRYSTAL PALACE.
By SAMUEL PHILLIPS.
TO ADVERTISERS.—The first contract for One Hundred Thousand Copies being nearly completed, the Publishers are prepared to receive renewals of final Advertisements for a Second Series of One Hundred Thousand Copies.
11, Bouverie-street, September 7, 1854.

NEW EDITION OF THE CRYSTAL PALACE OFFICIAL GUIDEBOOK.
By SAMUEL PHILLIPS.
A NEW EDITION, corrected and enlarged with NEW PLANS of the BUILDING and GROUNDS, an many additional Plans of the various Courts, is published this day, price One Shilling.
*** The Official Guide-books to all the Courts are always on sale in the Building, and at all railway stations.
BRADBURY and EVANS, 11, Bouverie-street.

FREEHOLD LAND SOCIETIES.
Now ready, second edition, price 5s.
DRAFT RULES, for the Formation of LAND SOCIETIES, with Suggestions for the Enfranchisement and Improvement of Copyhold and Church Property.
By ARTHUR SCRATCHLEY, M.A. F.R.A.S.
Actuary to the Western Life Assurance Society, 3, Parliament-street, London.
CHARLES MITCHELL, Red Lion-court, Fleet-street.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (to cost of postage). No. V. for April, just published
GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

The Builder.

TURDAY, SEPTEMBER 9, 1854.

E have had before us for some time Mr. Petit's "Architectural Studies in France," and it may be useful in more than one way to notice it just now.*

London streets are hot and dusty: there are horses in Rotten-row: all the "societies" closed, and most of the theatres: there are a few people left to call upon, and the tations, if you have any, are for the country. Fewer words, leaving the "fashionable novel" e, summer is here in earnest, and if you template a ramble abroad for change of air scene, and can manage it—we hope you —now is the moment to think about starting. time occupied need not be unproductive: ructions and re-creation (just say that last d over twice to feel its import) may be ed, and when you come home to more plod- and continuous work again, if such be your you will find it all the lighter for the ite, and yourself all the wiser and the better what you have seen. If you ask us for a e, and do not know the Romanesque rches south and south-west of Paris, we ld say take Mr. Petit's book as a guide, make for the Loire; and thereabout—in ou, Touraine, Angoumois, Perigord, and ergne—will be found an extraordinary col- ion of churches which will open new notions he subject of the ecclesiastical architecture France to those who know it only by the rches of Normandy. We can scarcely enter into the character of English architecture make the right use of it, unless we give e attention also to that of France, Ger- y, and Italy.

The remains of English mediæval archi- ure," says Mr. Petit, "numerous and im- ant as they are, are not sufficient for its own val: some new combination is necessary to the stimulus now so much wanted. It is lent that architects feel this, by the number hurches springing up on French and German dels. But we look for something more than e copies. The deficiency is not to be remedied few importations of transoms or capitals, or n of general outlines and plans. Our object ot, or ought not to be, to produce a building ch might be mistaken by the antiquary for a imen of a particular period or country, but fitted in every respect, in reality as well as earance, for its purpose, and sound and ect in its design, its construction, and its rnamentation. And if, in our attempts to in this end, we make use of ancient exam- , we must not content ourselves with finding norities for such and such a form, but must n carefully to discriminate between features ch are simply characteristic of date or coun- and true architectural principles." True ciple,—that's the point. The Gothic prin- e, he believes, was more completely developed an early period in England than anywhere

Our author's object, in the tour of which this k is one of the results, was to study prin- ally, if not exclusively, the styles *preceding development of Gothic* in the thirteenth tury, with the view of considering whether ot they contain the elements of a pure and manent round-arched style, for the esta- hment and carrying forward of which he ks. "If such a thing," Mr. Petit says, a pure, beautiful, and correct round-arched style lies within the bounds of possibility (and I confess I hope it may, for the sake of our own church architecture), we can nowhere better look for its elements than in the southern provinces of France. We meet with specimens worked almost with the classical delicacy of the Italian style. The shafts often have nearly a pure Corinthian capital. The heavy cushion capital, so universal in England, and so common in Normandy, is scarcely to be found south of the Loire. Where an exceptional instance occurs, it may possibly be attributed to English workmanship, as in the province of Guienne, where I noticed its appearance in the abbey of La Sauve, near Bordeaux. However the earliest Romanesque may have originated in barbarous and unskilful imitations of Roman architecture,—the later Romanesque, when it showed an inclination to imitate, was the very reverse of barbarous."

The principal characteristic of the buildings of Auvergne is the *barrel roof.* "This style, in fact, prevails through a large extent of country: indeed it is the common type of the French Romanesque. But in Auvergne it appears to be worked up with a higher degree of finish than elsewhere, and to have more the character of an independent style, besides which it exhibits certain peculiarities in that province which considerably increase its effect. I may also be influenced by some very bold restorations at Clermont, Issoire, and Brioude, the success of which showed that the style must have something beyond mere antiquity to recommend it. The churches of Perigord and Angoumois are without lateral aisles, and are roofed with *a series of domes:* those of Anjou, also without aisles, have square compartments of *cross vaulting*, much raised at the apex."

As an example occurring between the roofs of Perigord, which consist of a series of domes, and the cross vaultings of Anjou, Mr. Petit illustrates very fully the church at Loches in Touraine, an exceptional structure, which presents, when seen at the side, two steeples of nearly the same height, and two large octagonal pyramids between them. The nave has no aisles, but independent rooms or chapels in their place. The nave is divided into two square compartments by a plain pointed arch; and over these compartments are the octagonal pyramids already mentioned, the same shell of stone forming both the exterior and interior roof. According to French authorities, the present church was built nearly entirely in 1180, in the place of one consecrated in the year 965. The nave being wide, the barrel roof then in use might have been felt to be inconvenient or insecure, and so the architect divided it into two square compartments, and applied to each of them the spire then coming into use.

The octagonal spire appeared at least as early as the middle of the twelfth century. There is one at Cormery, between Loches and Tours, which cannot be later than that date. The stage of spire-lights, one on each face, is pure Romanesque (fig. 1). At Beaulieu Church, too, an interesting Romanesque structure, about a mile east of Loches, of which we give a view, there is also a spire (fig. 2).

We will return to Loches, to insert a view of the font, which is cylindrical in form, and has ornaments of a very curious character—a reflex of those of Roman times (fig. 3). The west door, too (fig. 4), is interesting and peculiar. The view of it, with the others given, will serve as an example of one portion of the numerous illustrations which the book contains. It has besides a large number of Mr. Petit's own peculiar sketches, reproduced by the anastatic process.

The peculiarity in the plan of the church at Loches—namely, a wide nave without aisles (or with such as might be omitted without affecting the character of the church), will be found, says Mr. Petit, "if we draw a line from north to south through Loches, extending it northward as far as the Loire, and southward pretty nearly to the Pyrenees," in a number of important churches westward of that line.

This arrangement prevails in Angoulême Cathedral, which was commenced in 1109, and is said to have been completed in 1136.* Three hemispherical domes form the roof of the nave, but it has *pointed* pier arches.

This building presents an extraordinary example of the employment of sculpture externally. The front has an enormous arcade, of five semicircular arches and shafts, and these are subdivided into numerous niches and panels occupied by sculptured figures. M. de Caumont, who examined this cathedral in 1834, considers that originally the cupolas formed the external covering of the nave, but that, finding it difficult to keep out the water, a wooden roof was afterwards placed over them In the Church of St. Front, at Perigueux the same arrangement has been made; but at Loches, as we have said, the two cupolas which there cover the nave are exposed.

"In character the front of Angoulême resembles that of Notre Dâme de Poitiers, and is of that transition period when the semi-circular arch was about to give place universally to the pointed. In width it is about 62 feet. The entrance doorway in the centre was spoiled by injudicious repairs in the last century: formerly it seems there was a porch before it composed of three arches. In the arcade on either side of the door, the heads of which take a slightly pointed form, as at Notre Dâme de Poitiers, and elaborately sculptured, are the twelve Apostles: underneath one of the groups are sculptured knights tilting, in chain armour. Above the door is the only window in the façade, now closed, having around it sculptured figures, in arcades. Over it, in the centre, is a figure of the Almighty, in a *vesica piscis*, supported on a very elegant honeysuckle scroll, and flanked by the symbols of the four Evangelists. The intrados of the arch above it is sculptured to represent eight angels. The upper arcade contains a number of circular medallions, with heads upon them. The cornice which terminates the front, and the small turrets at the angles, seem to have been added at the commencement of the sixteenth century."†

Never shall we forget the effect the view of this front produced upon us. We had seen fewer buildings then than now; and the height of the façade, the peculiarity of its arrangement, and the amount of sculpture which it presents, serve to make it singularly striking. The town itself stands most picturesquely on the top of a very regularly formed mountain: the approach to it from Poitiers is remarkably pretty. When we were there, the railroad was not formed, and the journey was a troublesome one. Now it is as easy as from the Bank to Brompton.

The sculpture in the front of Notre Dâme, at Poitiers, by the way, is of the same character as that at Angoulême. The town itself, essentially an old place, is full of interesting matter. It is about 200 miles from Paris, on the road to Bordeaux.

St. Jean, at Poitiers, is a very early structure, doubtless earlier than the year 1000. Some have thought it a Roman temple, others that it was erected about the fourth century. The walls have been covered with paintings, including figures of large size, and a fret, in blue, red, yellow, and white. The names of the figures are written at the side of them in upright lines, one letter over the other, in Byzantine fashion. The straight-lined arch occurs, and some of the columns are very Roman in appearance. The

Architectural Studies in France. By the Rev. J. L. Petit, with illustrations from drawings by the Author and P. H. La Motte. London: George Bell, Fleet-street. 1854.

Fig. 2. View of Beaulieu Church Tower.

upper part of the gable, externally, was originally inlaid with glazed bricks or coloured marbles in patterns. The *Société des Antiquaires de l' Ouest*, saved this very interesting building from destruction, and occupied it, when we were there, as an architectural museum.

St. Front, at Perigueux, may be regarded as the earliest type of the dome-roofed churches, and even there the arches of the dome compartments are pointed. It is said by M. Verneilh in his excellent work, *L' Architecture Byzantine en France, St. Front de Perigueux et les Eglises a Coupoles de l' Aquitaine*, that there are at least forty churches in the province of Aquitaine which are roofed with a series of domes, most of them lying round Perigueux and Angoulême. The connection of this class of buildings with the architecture of Byzantium is too obvious to need comment.

We would mention that at Civray, which is between Poitiers and Angoulême, the church of St. Nicholas has a west front covered with sculpture similar in character to that of the cathedral at Angoulême.

Should such of our readers as may be led to visit this part of France have time to travel a little to the east of the line we have partly indicated, they would find in Bourbonnais and Auvergne, about the Puy de Dome, a number of most interesting structures. The antiquities of the first-named province have been finely illustrated, as indeed is the case by others throughout France, in a large and costly work commenced by Achille Allier.* And, as further bearing on this point, let us say that in the northern half of the gallery east of the Crystal Palace, at Sydenham, will be found a large number of calotype views of Romanesque buildings in France, of great beauty and interest, many of them having reference to Mr. Petit's book. Those who are pursuing the subject may consult them with advantage and delight. It is impossible to over-estimate the value of photography to the architectural antiquary. We must now, however, bring this notice to a conclusion. Although Mr. Petit's beautiful book is for the most part descriptive, it is interspersed throughout with references to the author's particular views. While considering that the Gothic style is not a bad style, and that the architects of the day are not bad architects, he maintains that the two do not agree together, and that the result is unfavourable to both. A work in what we call a debased style may be the work of a great mind, and show more strongly the impress of genius and feeling than a correct imitation in a purer style.

Our author combats throughout the endeavour to transplant the growth of one period into another widely different.

True Gothic gave scope to the highest art of the period. But modern Gothic has required the artist to work down to a low standard, and to produce grotesque caricatures, which, even when they are copies of mediæval works, have this difference, which is at once felt, that the former are the work of men doing their best with feeling and energy, and the latter mere apings of their peculiarities and a deliberate degradation of art. Mr. Petit wants to see if the Northern Romanesque has vitality in it, and can be carried forward into a style for the present century. He urges that the Angevine style, naming the cathedral at Angers as the finest example of it, admits of more originality than any other, and should be studied well, if we wish to revive, in the proper sense of the word, mediæval church architecture. What is wanted is a recurrence to the principles of true taste and common sense, instead of the practice of thoughtless copyism. While taking advantage of all that has been done before, we must avail ourselves of modern appliances, express present ideas, and so add new features and combinations, and produce a style of architecture to meet the wants of the day, and gratify its longings for the beautiful.

New Church at King's-cross.—A new church for the densely-populated district of King's-cross is to be commenced as soon as circumstances will permit.

New York Crystal Palace.—The directors have authorised their president to sell the entire palace, gas fixtures, iron fence, and other property, deliverable on or after 1st November next, for one-half its actual cost, which is understood to have been about 700,000 dollars. Competent engineers and architects are said to have decided that the palace could be taken down removed to the Battery, and put up again for 50,000 dollars or less; or at Philadelphia or Boston for less than 75,000 dollars. It is estimated that the stockholders will realise from 20 to 30 per cent.; but extraordinary attractions are to be put forth from this time to the day of its close, on 1st November, and the expected profit will still farther benefit the stockholders.

ON THE PROGRESSIVE CHANGES IN ORNAMENT IN THE SUCCESSIVE STYLES OF MEDIÆVAL ARCHITECTURE.*

IT is said of the American lawyers, that they cannot make out the conveyance of an acre of land without commencing with a recital of the discovery of the New World by Columbus.

Be this true or false, I fear you will think me equally prosaic, when you find that I cannot give you a straightforward description of a Norman or Early English capital without first troubling you with an abstract of their title in direct succession from ancient Rome; yet how seldom do we reflect, while tracing the beautiful arts of the thirteenth and fourteenth centuries, back to the comparative barbarism of the ninth and tenth, that there is anything strange or inconsistent in the fact of those early ages having been barbarous, though we well know that, if we go again five centuries further back, we shall find the very reverse, and reach again an age of the highest civilization.

The civilization of the ancient world, proceeding in regular course from the original seat of the human race, through Egypt, Assyria, and Greece, had reached its culminating point in the days of that mighty empire whose *iron* sway reached from Parthia to the Atlantic—from the Grampians to the African Desert.

From this point it descended in a rapid course of decay down to the end of the fourth century of our era. From what cause it is impossible to determine, the old order of things seemed to be worn out; and if we may judge by the result, it had become necessary to the regeneration of the human race, that the whole polity and system of the ancient world should be destroyed, that out of its ruins a new order of things should be originated, and that by races of men hitherto scarcely heard of.

The Roman empire, weakened by too intimate an union with conquered races, its warlike spirit tamed by wealth and luxury, and its unity lost by the removal of the seat of government to Byzantium or Constantinople, with the partial division of the eastern from the western empire, presented a temptation no longer resistible, to those vigorous though barbarian races which, in the recesses of the north, had escaped the Roman domination. Province after province fell into their hands, till at length Rome herself was taken, and the mighty image of ancient history, smitten on its feet of mingled iron and clay, was broken in pieces, and became as the chaff of the summer threshing-floors.

The arts, however, and civilization of ancient Rome were more mighty in their resistance than was Rome herself. Horde after horde of conquering barbarians became tamed and humanized under their influence, while wave after wave having rolled in its tide of yet unmitigated barbarism, recoiled before the charm of civilization, and settled down to cultivate the arts of peace, till themselves overwhelmed by some new inundation.

So often was this repeated, that the old world, at least in its western regions, seemed almost as if reduced to chaos, a state from which it was hardly redeemed even by the mighty efforts of Charlemagne, the magnanimous and highly-gifted king of the (till then) barbarous Franks, and by that master-stroke of policy which led him to restore (in name at least) the Empire of the West. A modern writer remarks on this great event, that "on the barbarian world its effect was magical. Those dull instincts and imaginings, so abortive hitherto, and so wide of any definite aim, became on the instant so many powerful and concordant elements of stability. . . . From that hour the barbarian tribes acquired a new relation, one that attached them all simultaneously to a grand idea of general and permanent association. This," he adds, "was the beginning of modern Europe."

It would, however, be an exaggeration to suppose that *art* had absolutely perished during those dismal centuries. Several causes had co-operated to save it from utter destruction. First among these was the fresh and vigorous intellect of the conquerors, and their aptitude for receiving the arts of civilization. Secondly,

* Read by Mr. G. G. Scott, at the Architectural Museum, Westminster, as previously mentioned.

the existence of *the Church* as a permanent and unbroken institution amidst all these convulsions, receiving into her pale horde after horde of the unpolished conquerors, and keeping up a nucleus of art and learning among those who had done their utmost to sweep both from the face of the earth. And, thirdly, the survival of the *Eastern Empire* at Constantinople, preserving in an unbroken chain her own development of ancient art, and ever ready to supply her aid and instruction to the devastated west, the moment that either her own successes against the invaders, or their settlement into momentary tranquility afforded an opportunity.

Nor should we view the breaking up of the ancient civilization as an event of unmixed evil *even in itself*. We cannot venture to speculate on the views and intentions of an all-wise Providence, but we *can* judge of them by the *results*, and we now see that after the dark and dreary interval, there has arisen a civilization so infinitely superior to that which was thus destroyed, as perfectly to compensate for the ordeal through which it has been attained; and I doubt whether the Middle Ages themselves (now so much despised) were not in many respects superior to the state of things under ancient Rome. They were ages of more free development, and consequently of a greater amount of discovery and invention; as, for instance, the discovery of the compass by which the world is circumnavigated; of printing, the greatest blessing to the human race (not to mention that destructive invention which has changed the whole art of war); the discovery of the New World itself and of the germs, at least, of astronomy and of chemistry. I know of no discoveries of old times to be compared in the importance of their results with these of the Middle Ages.

But to return to my subject: Constantinople and the Greek or Eastern empire was the connecting link between the ancient and the modern world. While the west was being ravaged by barbarians, *she* had generated a development of art peculiarly her own: this (as the word Constantinopolitan would be troublesome to pronounce) has received in our day the name of the Byzantine style. It is a direct development from the Roman, but departed very widely from the original. It would be impossible here to enter into a description of this style, but it is necessary to make special mention of it, as it is—so to speak—the leaven, by means of which the *debris* to which ancient art had in the west been reduced, was caused to ferment, and in time to develope itself into the glorious architecture of the Middle Ages.

The palace built at Ravenna, about the year 500, by Theodoric, the great and civilised king of the Goths, himself educated at Constantinople, was probably one of the earliest types of this style, and so magnificent did it appear in the eyes of Charlemagne, that he, at enormous cost, transplanted its columns and other parts across the Alps to Aix-la-Chapelle, a distance of 600 miles. Fifty years later than the date of this building, the church of San Vitale was erected in the same city, under Justinian, the founder, or refounder, of the magnificent church of St. Sophia, or sacred wisdom, at Constantinople. This church Charlemagne took as the *model* of his cathedral at Aix-la-Chapelle.

Working, then, on the model of *one* Byzantine building and with the materials of the other, we may safely pronounce his church, though since in great measure rebuilt, and now fearfully modernised, to have been *Byzantine*. The only other work of his remaining, is a fragment of his monastery at Lorsch, near Worms. This is in a debased Roman style, with Corinthian columns and entablature, hardly approaching even the *Romanesque*.

We knew nothing of the architecture north of the Alps (since the fall of the Roman empire) till his day; but from these two buildings we may judge that his imported styles were *Byzantine* and *debased Roman*. I mention this because there is a theory repeated by almost every English writer on the subject, that a new style had been generated in northern Italy under the Lombard kings, during the seventh and eighth centuries, differing greatly from Roman or Byzantine, but closely foreshadowing the northern Romanesque of later days; and that this style was transplanted by Charlemagne to the banks of the Rhine, and became the type of the German Romanesque. I plead guilty to the heresy of not believing a word of all this.

It is quite true that along the valley of the Rhine we find a series of churches closely resembling those of Lombardy; but it is *perfectly certain* that none of the former are of the time of Charlemagne, and *very uncertain* that any of the latter are of the time of the Lombard kings. It appears to me, on looking at the character of the Lombard churches, impossible to believe that they can be of the early date assigned to them; and an Italian antiquary (Count San Quintino), boldly assigns them to the *eleventh* century instead of the *seventh*, the date usually claimed for them; an opinion apparently followed by the author of the *Moyen Age Monumental*. English antiquaries seem, however, determined to hold to this Lombard theory. That this family of churches are the parents of our Northern Romanesque, I think pretty certain, but that they preceded it in date, by three or four centuries, seems to me *utterly incredible*; and I am convinced that the more closely the subject is investigated, the more fallacious will the theory be found.

Early in the tenth century, Lombardy was devastated by the Pagan Huns, and many of its cities destroyed. It is probable that most of the ancient churches then perished; and that the style now known as *Lombard*, arose subsequently to this, and under the benignant rule of the three Othos, who held the kingdom of Italy from 962 to 1002. If so, nothing can be more natural than that the German Romanesque should be identical with that of northern Italy, both having arisen under the rule of the same monarchs. The earliest German churches of this style, date from the latter half of the tenth century, and from that time, both in Germany and in Lombardy, the style continues in unbroken progression to the beginning of the thirteenth. The Romanesque style may be defined as the first distinct development of art in western Europe, as she rose from the chaos which followed the ruin of the ancient Roman empire. It may be said to date from the restoration of the western empire by Charlemagne, A.D. 800, but *practically* from the better establishment of that empire by Otho I. about a century and a half later. It assumed many varieties in different districts, in some closely resembling the corrupted Roman of earlier times, in others bordering more upon the Byzantine; while in others (especially in Normandy) it assumed more the form of an original style—more closely foreshadowing than elsewhere, the coming *Gothic*, or Pointed architecture.

The Normans, or Northmen, had, during the ninth and tenth centuries, ravaged England, France, and parts of Italy and Germany. They were the last of the great hordes which devastated western Europe, but once settled down on French soil, and transplanted thence in a civilized state to our own country, they rank among the greatest promoters of the development of art.

Among us accordingly the Romanesque has received the name of the *Norman style*; indeed, so distinct is the Romanesque of Normandy from that of other parts of Europe, that the name is far from inappropriate.

It is so well known to us from the magnificent specimens which remain in our ancient cathedrals, that it would be wasting time to attempt a description of its general characteristics. As a style of architecture, it is noble and impressive in the extreme; yet it must be admitted that its *ornamentation* is far from being refined, and in its earlier phases is decidedly barbarous.

The foliage is no doubt founded mainly on Byzantine types: indeed Theophilus, a writer on art at that period, expressly directs the copying of the ornament from the works of Greek artists. There is one element pervading all the foliage, possibly taken from nature, but so constantly repeated as to become purely conventional, yet grouped often so well as to produce fine and very rich effects; the stalks of the leaves are often enriched with beading, and tied together by bands

I suspect that this element was developed by the Byzantine artists for the ornament so usual among the ancient Greeks, and vulgarly known as the honeysuckle. If so, a peculiar interest attaches to it, from the fact that it is now known that the Greeks had themselves borrowed it from the Assyrians, which would trace up the conventionalism of the early mediæval artists to the earliest times, and to the very cradle of ancient civilization. This leaf does, however, somewhat resemble certain natural productions, particularly the leaf of the daisy and some other humble plants, though it is hardly likely that if nature was imitated at all, such obscure types should be those selected. The outline of the capitals in the earlier specimens is usually convex and heavy, though in neighbourhoods where antique remains existed, the Corinthian capital is often imitated, sometimes very closely.

The capitals are often a somewhat shapeless convex mass, covered with entwined or interwoven foliage, frequently intermixed with lizards, dragons, or other animals or monsters. If this had occurred in the north alone, one would have attributed it to Danish influence, as the old Runic crosses are generally thus ornamented. I believe, however, that *both* are imitations of Byzantine art, and originated in their basket capitals and other somewhat similar ornaments.

In England, the two earliest *Norman* capitals appear to be the plain cushion, derived also from Byzantine work, and a rude capital with a miserable attempt at a volute at each angle, originating, I fancy, in a Byzantine variety of the composite capital. That these types are cotemporary, is proved by the one being used by Bishop Walkeline, at Winchester, and the other by his brother, Abbot Simeon, at Ely, both shortly after the Conquest. There is also an instance of the latter at Lincoln, in one of the churches built by the Saxon inhabitants expelled by the Conqueror from the upper city. Both of these are sometimes enriched by interwoven foliage.

What is called *surface ornament* is a great principle in the Romanesque style. This is the enrichment of surfaces without materially altering their general forms. Of this kind are the majority of the enrichments of arches, of which there are an infinite variety. The orders of the arches naturally *square* in section are decorated profusely with chevrons and other ornament, which in earlier instances do not much disturb their form; even the shafts are often most richly decorated, and walls, &c. are often enriched with carving usually of no very refined character.

This rudeness of ornamentation, however, vanishes as we proceed. In the early stages of the style art seemed to have commenced anew, as if never practised before, and to have started afresh with its rudest elements.

This, however, does not continue long. We soon find the foliage assuming great vigour and grace, and towards the end of the Romanesque period its foliage, as, for instance, at St. Cross, is often of exquisite beauty, while the figure though still somewhat uncouth, assume a dignified and severe grandeur singularly impressive. Throughout the whole style Byzantine feeling prevails in the character of the ornament, excepting now and then where, as in one of the doorways of the cathedral of Mentz, may Corinthian capitals are copied. The foliage retains its peculiar conventional character, unlike any natural production, yet often of great beauty, and distinctly traceable to the Byzantine style, while the figure sculpture is clearly imitated from the Greek paintings of the period.

I do not propose to go into a minute description of this style, which would be a sufficiently extensive subject for a separate lecture, but shall proceed to describe the greatest change which art has ever undergone, and commence with the Transitional Style.*

A BRECON WELLINGTON STATUE.—The inhabitants of Brecon are about to raise a statue of the Duke of Wellington, and the site for its erection has just been selected. It will be placed on the Bulwark about 50 feet from the church. The height of the statue and pedestal will be 18 feet, the former being 8 feet and the latter 10 feet. Mr. John Evan Thomas, sculptor, will be the artist.

* To be continued.

THE LIFE AND DEATH QUESTION.

THE OUTBREAK IN BERWICK-STREET.—A WORD OR TWO ON PROTECTIVE MEASURES.

MANY months ago we referred to the bad condition, in a sanitary point of view, of houses in the neighbourhood of Wardour-street, Berwick-street, Broad-street, and Marlborough-street, the absence of proper drainage, and the want of water.*

On Friday, the first of September, this district was attacked by a pestilence which has unfortunately swept away a large number of persons, who were, the day before, in perfect health. The people in this district were, no doubt, reading in the newspapers, or learning from others, that the cholera had reached London, but felt, notwithstanding the cautions which have been given, and the accounts of deaths from other parts, that they were themselves safe. On Friday morning, however, says an informant, people might be seen before the break of day running in all directions for medical advice. "The angel of death had spread his wings over the place," and by midday, groups were standing in the street, looking the picture of wonder and consternation. We have paid several visits to this neighbourhood since the cholera has come upon it. We will not particularly describe the cadaverous and frightened countenances meeting us at every step—women weeping in the street, and children who, but a few hours before, saw their parents in seemingly perfect health, and are now without a protector on the earth. Our object is not to excite alarm; but it becomes the duty of all who have an interest in the welfare of the community, to investigate the causes of this sudden and frightful attack in the midst of the metropolis.

Taking the Pantheon, in Oxford-street, as a starting place, we pass down Berwick-street to Broad-street: this is a wide street, well paved, and most of the people who live near say well drained. "We have capital drainage," say many, and the general impression over the whole district is, that the disease has been caused, not from ill sanitary condition, but, as they say, "by the hand of God." Strongly believing, however, that an all wise Providence sends the pestilence and other evils upon us for the general good, we, nevertheless, feel certain, that much is left in the hands of man. We must insist, as we have done again and again, that the lives and health of thousands are sacrificed for want of proper sanitary measures.

In Broad-street few houses have escaped the disease; and in looking along it on Wednesday last, we counted seventeen shops closed and about twenty open. On some of the closed shops written papers were posted, stating that, "In consequence of the death of the proprietor, this business would be closed" until a certain day, &c. Groups of people were standing at the doors of private houses, seemingly let in tenements, speaking of losses which they had sustained. A baker said that on Tuesday morning he counted nine persons whom he knew, close at hand, who had died on Monday, and were buried. Mr. Jones, the active City missionary, told one of our inquirers, "that on the same day he knew that sixty had perished in his district, which did not extend far. It was like a plague." We made numerous inquiries, and although the first answer usually was that the drainage was good, further examination showed the existence of cesspools everywhere.

At one house in Broad-street, the people said that they had had no ill smell to complain of until only a week back, and then it was very bad. The dust-heap was nearly full of refuse. The condition of the atmosphere within the house was bad in the extreme. This, and the discolouration of the paint of the doors, seemed to show that a cesspool was close at hand. "Have you had cholera here?" we asked. "Yes; a person lies dead in the kitchen, and two have died upstairs." In the closet there was a glazed pan, but the water was not laid on.

"You see," said an intelligent man in the same street, "that these closets are only a disguise—the cesspool is still there; and I would like to know how many cesspools there are in this street that have been partly filled in, not emptied, but covered up. There was a great deal of wet weather at the early part of this year; and, in fact, for some time past the earth has been saturated, and now the hot sun gathers the moisture, and of course where cesspools are, the evaporation from the earth is poison. It is almost unnecessary to tell you that these disguised water-closets, with surface drains only carrying off the liquid matter, pass through the kitchen; and it is a sad fact, that very often in the kitchens of the houses around here there are more human beings lodged than in the whole house besides. But what can the poor creatures do?" Next door, and the next, and almost in every house in this street, there has been disease and death.

The most careful examination of this street by the proper authorities should immediately be made. An exciting cause there must be, and this should be traced out. Some attribute the outbreak to the opening of the sewers. A correspondent of the *Times* speaks of the plague-pit near Regent-street. Let us get at the truth.

"Pray go and look at St. Ann's-court and Place, not far off," said one; "you will there find the people almost swept away." On proceeding there, we found the place—as in fact all the streets near were—strewed with quick lime. This court and place are not what may be considered dilapidated, in comparison with many other spots in London. The same appearance of panic showed itself here as in other places: many houses were closed, and the tradespeople, having no business to attend to, stood conversing at their doors with their neighbours. In a passage opposite, the lime-washers were at work, and different kinds of purification going on. This was St. Ann's-place; here the cesspools could not be overlooked; the houses are small. The inhabitants all complained of the bad smells, particularly "against rain," and were in distress, as they said, at receiving a notice to quit. "Where can we go to, sir, although here is not very good, we cannot get better; here is the notice, but none of us can read, no more can the landlady who receives the rent,—will you please to read it to us." The paper was not a notice to quit, but a warning to the landlord to empty the cesspool in twenty-four hours, to limewash the place, and do other matters. We put again the usual question. There had been two deaths in this house, and in the next four had occurred in one room, "a number of people lived in it." There was a cesspool there also. Now that death has taken off the inhabitants of the place, notices are sent respecting the removal of the cause. We have barely patience to ask,—why this was not done before the plague came? To empty the cesspools now will do more harm than good.

In St. Ann's-court the drainage of the closets is most imperfect: many of the people complain of bad smells in the kitchens. So numerous were the deaths in this place, that the bodies were carried away without ceremony, five or six at a time. Mr. Allen, one of the medical officers of the district, states that he made four applications to the Commissioners of Sewers to stop up three gully-holes. One was after a time done—the other was left until the people around it all died: the third still remains.

So imperfect seems the drainage of this district, so far as the water-closets are concerned, that it would be tedious to mention the various particulars which we gathered after several hours' painful investigation by more than one person.

Passing into the back yard of a house in Berwick-street, where the shop was closed, we found a cesspool, the dust-place full, the sink dirty. At the back of the yard, we climbed up a ladder staircase, and found two elderly women. "Have you had any deaths from cholera?" "Yes, two; the smell is very bad here at times. You see my room is just above the closet, and there is no ceiling. This lady lives in the cellar," into which we accordingly descended with the tenant. "Here, sir, you see I am obliged to live. I pay 3s. a-week rent. I have a mangle, you see, and cannot very well leave my bread, and so many people object to mangles; but you see the floor is rotten, and the smell at times is dreadful in the winter, when we are obliged to shut up close. When I sit beside that fireplace, it is almost as bad as being in a water-closet."

In some of the places, already alluded to in the *Builder*, surrounding the model buildings now in course of erection, the condition of the yards is as bad as ever, the same broken pavement and filth. "They should take away the dust, governor," said a man; "there has been nobody here for it for a month."

Our journey through this scene of death more than ever convinces us that to remove the cesspools would be the means of greatly lessening cholera and fever: we say this in perfect confidence; and ask all in their respective neighbourhoods to do what they can to effect this: it is to be feared, however, that nothing effectual will be done until we get an enactment of Parliament much more stringent than those now in operation. Thousands, like the poor mangling-woman, are tied to their cellars and back rooms, and disease, and they need protection.

We saw some distressing cases of deprivation and poverty, and would suggest that a subscription for their relief should be immediately commenced.

Let us now look to the more general question.

Air and water are the two great diluents and distributors of those poisonous emanations from decaying animal and vegetable substances to which so much preventible disease has been circumstantially traced, and whether such plagues as "the black death" of past times, or "the blue death" of the present—as by parity of nomenclature we may term the modern choleraic plague,—be attributable to such organic causes as those more ordinary ones which are so well known as originators, or, at least, as predisposers to various malignant forms of fever, or whether it be to less ordinary ones that such plagues are attributable, as to mineral vapours arising from the interior of the earth, or pervading and traversing the heavens, and met with by the earth in her course; still both the air and the water will be not only their diluents and palliaters, but their dissolvents and diffusers; so that while mitigating their local intensity, these grand menstrua must extend the malevolent influence far and wide. It is a matter of the utmost importance, therefore, not only to choose, where such choice is possible, the freshest air and the purest water within the reach of those who wish to guard against the occurrence of disease, but where such choice, as but too often happens, is not possible, to act on such air as they must breathe, and such water as they must drink or otherwise internally use, so as to neutralize, as far as they can, all malignant impregnations, whether mineral, vegetable, or animal. Now, it is known that the most poisonous agencies with which, in the course of nature, either air or water are defiled, consist of certain elements made gaseous, vaporous, or volatile, by means of hydrogen. Such are phosphuretted and sulphuretted hydrogen. As regards mineral emanations, it is also known that sulphuretted hydrogen itself pervades many portions of the earth's interior; and it may be recollected that, in a case of poisoning and death which occurred some years since at Long-acre, from breathing sulphuretted and phosphuretted hydrogen suddenly liberated from a mass of ordure, the unfortunate who died exhibited an exact similitude of the blue stage of cholera. We do not, however, in here instancing so striking and instructive an occurrence, mean thereby to decidedly attribute cholera to sulphuretted hydrogen, whether that so plentifully generated in stagnant drains and sewers, especially in the heats of summer and autumn, when cholera does most prevail, or whether emanating from the earth's interior; but simply to point to what seems to indicate something like the sort of agency which is capable of producing the worst choleraic symptoms, and which we but too well know is not only *capable* of producing death under somewhat milder or less appalling forms, but actually *does* so, yearly, and regularly, in all ordinary seasons, while it is, in all probability, no less capable, in seasons which may possess some such peculiarity as that of a defi-

* See also "London Shadows."

ciency in the scavenging or purifying ozone, to which Liebig is inclined to attribute cholera, of producing death under a form far more appalling, and with a speed far more rapid, and liker to the death which the poor fellow at Long-acre died.

We desire, then, to say a few words on the purification of the air we breathe and the water we drink, with the view of destroying any malignant agencies with which they may be impregnated.

To this end it would appear that the most potent disinfectants are likely to be those which are most certain to destroy those hydrogenous combinations to which we know that so much evil *must* be attributed. Now the most celebrated and most effectual disinfectants and preventives of disease under various forms, whether febrile or choleraic, are precisely those which do deprive of their hydrogen such substances as the "dire" and deadly "*hydras*" we have just been indicating. Theory is thus corroborated and confirmed by facts and practice. There are a few most useful and most beneficial disinfectants which ought just now to be almost literally in every one's hands. This is no mere medical question which ought to be left to the family physician to recommend. It is a preventive measure which it is the duty of every one both to himself and to his fellow creatures at the present crisis daily at least to practise. Clouds of sanitary incense ought, morning, noon, and night, to arise within and around every domicile in every town for the purification of its atmosphere. The disinfection of its water may not be so readily effected; yet here too, much may be done at the moment of peril, and far more in time to come.

Sewers commissioners, moreover, ought to be compelled to flood the drains and sewers of their respective towns with aqueous solutions of tons weight of approved deodorizers.

Let us see what even one solitary individual can do, with a will and a way, to benefit a town.

In a printed and published report, of date 11th October, 1848, by Mr. Herapath, of Bristol, the well-known chemist, in which he states, as the result of numerous experiments, that the cause of cholera is a putrid animal poison, the only effectual neutralizer of which is chlorine gas, it is reported that after a gratuitous distribution of 1,200 small quantities of materials for its evolution in Bristol during three days in 1832, the deaths from cholera suddenly fell from 10 to 1 a day!

Along with the packages of materials, Mr. Herapath appears to have given instructions for their use, and presented the following recipe (the usual one, in fact), containing the names and quantities of the ingredients:—

"Black oxide of manganese, 1 part, say 1 oz.
Common salt ..... 3 do. „ 3 oz.
which mix.

Oil of vitriol, 2 or 3 teaspoonfuls: stir with a stick, in a gallipot: place in room or stair, in hall or yard, close to back door, so that the fumes may pervade the whole house, three times a day."

The sanitary power of chlorine gas indeed is so well ascertained and so undoubted, that we are surprised municipal and parochial authorities have not long ere now been instructed and compelled by the legislature to use it, or some other equally well known disinfectant or deodorizer, both largely and continually, throughout the districts under their authority, whenever either cholera or fever prevail. There is even a cheaper and simpler disinfectant which Dr. Graham very strongly recommends as still better than chlorine, at least for typhoid fevers, namely, the fumes of burning sulphur, which are also used by the Government itself (or used to be so) under quarantine regulations, as a disinfectant both in plague and in cholera. Both of these agents, we need scarcely observe, are powerful destroyers of hydrides, the chlorine by directly abstracting their hydrogen, the sulphurous acid by neutralizing it with oxygen. To those who do not mind a little cost, a glass stoppered phial full of bromine would be a useful substitute for chlorine. It is fluid, evaporates spontaneously, and is nearly as potent as chlorine. We wonder if bromine in drop doses in alcohol has never been tried inwardly in cholera.

There are various more or less excellent purifiers for sinks, drains, sewers, ponds, ditches, &c. such as chloride of lime (which, too, is often used in houses instead of manganese and salt in the elimination of chlorine gas), chloride of zinc, sulphate of iron (or common green vitriol), and even common quick lime. For the purification of water in cisterns or water-butts, pieces of charcoal may be introduced. As we once before hinted, however, probably very small quantities of sulphuric (or of sulphurous) acid might disinfect or detoxicate water as the fumes of sulphur do air. Sulphuric acid taken internally is now declared to be a certain corrective of that laxity in the bowels which precedes cholera, and even a cure for more advanced stages of the disease. This is quite a modern discovery. Yet we recollect reading a recommendation of it by that curious old chemist Van Helmont, as a cure much used in olden times for plague. Sulphur itself, in small doses, the writer has quite recently discovered to be a complete cure for slight or premonitory attacks of cramp in the limbs,—a fact well worthy of note at the present moment. It also mitigates laxity in the bowels.

In connection with the subject of chlorine as a disinfectant too, and especially in its form of evolution from common salt, of which it is the actuating halogenous principle, we observe it stated by Mr. Wakely, and, indeed, as a current topic of the day, that salt taken freely with the food is a certain preventive of cholera. We know too, that in 1832, a physician, (Dr. Latta, of Leith), cured many desperate cases of cholera by infusing aqueous solution of salt into the patient's veins, and, perhaps, had the talented originator of this idea still lived, we might have heard more about it than we now do. If it be true, as alleged, that no one who partakes largely of salt has ever been seized with cholera, such a fact strongly countenances Dr. Latta's practice. It must not be supposed, however, that salted meats are equivalent to salt used with fresh meats. This is very far from being the case. Whilst thus hovering on the regimenal boundary of the medical province, on which province our readers need not fear our actual encroachment, we cannot help alluding to another curious circumstance connected with salt, especially as it is *apropos* of pigs, which are "unclean things," but too much *apropos* of cholera in more senses than one.* It is a singular fact, that while fresh pork produces something like choleraic symptoms in certain constitutions, a simple sprinkling of it with salt over-night before its culinary preparation, completely prevents the occurrence of such symptoms in those thus otherwise liable to them. Another notable fact in reference to pigs we must also note. By the Jewish Scriptural law of God as given through Moses, swine are prohibited as unfit for human food. This is only one of numerous sanitary laws of vital import to which the Jewish community is subject. To some extent these sanitary laws are still observed; and it is a curious fact that no community or class of people, it is said, are so free from cholera as the Jews! What a noble subject we have here for our clergy to expatiate upon at the present moment! In fact there is one "clerk in orders," namely, the Rev. Charles Richson, M.A. who *has* enlarged upon it in a sermon preached in Manchester Cathedral on 30th April last, and published by request, with notes by Dr. Sutherland of the General Board of Health, the proceeds of the sale to be very appropriately applied to the funds of the Manchester and Salford Sanitary Association.† It would be well were hundreds of our clergy, who do not seem to have ever dreamt themselves of preaching from such fitting and timely texts as those connected with the Jewish sanitary laws, to purchase the sixpenny tract containing this sermon, and to read it to their congregations throughout the country. Had the Scottish clergy who denounced Lord Palmerston's reference to sanitary laws and to their infringement as promotive of cholera, only looked to the law of Moses, they would have surely hesitated ere they brought their "forty parsons power" of "odium theologicum" to bear upon his lordship's pungent and salutary recommendations. As to the Scriptural prohibition of swine, as unclean animals, it would be well if every community as well as the Jewish were still compelled to observe this very important sanitary law, at least so far as regards the beastly habit of breeding swine in the vicinity of human dwellings, and even in human dwellings themselves. Were cholera or the devil to enter forthwith into every such sow, and secure its speedy destruction, it would be fortunate.

Not one whit better than the Irish pig-breeder, is the landlord who builds rows of "houses" without the necessary means of cleanliness to each. In Blakeney's buildings, to which our correspondent, "W. H. B." who asked, "What is a house," alluded last week, there are nine houses—if we can so call them,—each containing on an average fifteen persons, and amongst all these 135 human beings, there is but one paltry arrangement for common cleanliness and decency. Could any other result be expected from such a state of things than the fact that, although Islington has always been comparatively free from cholera, and is at present in the enjoyment of the like immunity, for which it is indebted in great measure, we believe, to its elevation, and hence to its natural drainage; nevertheless, there have recently been, we are informed, no less than five cases of cholera in Blakeney's buildings!

For the present we shall conclude with a selection from recent communications, bearing more or less on the subjects of which we have just been treating.

One correspondent, signing "The Hermit in London," while adducing the experience and recommendation of Mr. Herapath, of Bristol, in reference to chlorine, remarks that—

"Until landlords and parishes provide proper house and street drainage, no place can be safe against cholera. But if people would only take the trouble to obtain (through the parish authorities when too poor), and use some of the above preventive materials in their sinks, drains, privies, and houses, and practise cleanliness in premises and person—if all foul waters, such as the docks, ditches, sewers, and their river mouths, had chloride of lime, &c. frequently thrown in, and all offal and carrion were speedily buried with lime; and if all offensive trades were compelled constantly to keep in use some purifying ingredient on their premises,—much mischief might be warded off.

"And all this might be done at a very trifling expense, perhaps a penny rate—if Boards of Health and Guardians would only do their duty and act; in default of which a fearful amount of responsibility will lie at their doors."

Another correspondent, "W. L. G." recalls attention to a precaution we have repeatedly urged, as to cleansing cesspools and drains, either in summer or while cholera or fever is prevalent:—

"Is it not important," he remarks, "in these serious times, to point out to the commissioners the necessity of choosing some other periods of the year for opening the sewers? The following streets in Westminster are and have been for these two months past, laid open for improvement:—Marsham-street, Tufton-street, Romney-street, Little Peter-street, the Horseferry-road, and Strutton-ground: the locality is well known to be bad enough to generate disease, but I think it is imperative and important to the public not to augment it by the dreadful stench of these pestiferous sewers."

The authorities ought at least, in every case, first of all thoroughly to deodorize, or cause to be deodorized, all offensive matter before its removal. Each day shows more fully that if vigorous measures be forthwith adopted in every parish, we may yet escape, under providence, much of the sorrow and loss which threatens us.

DEMAND FOR MASONS IN CORNWALL.—Such is the scarcity of masons in Cornwall, that the town-crier of Liskeard has been put into requisition to offer 5s. a-day.

* It is a remarkable circumstance, not only that none of the lower animals have till now been known, so far as we are aware, to have ever been seized with cholera, but also that now it is declared that pigs in Armagh, in Ireland, are dying with all its worst symptoms. Swine's flesh is said to be the likest to human flesh of any animal in flavour and other peculiarities. Would that men lived too a little less like to filthy swine. Like all other animals but swine, they might thus escape the cholera, to which in many instances the filth of swine, no less than swine-like filth of other kinds, in no small degree contributes.

† This useful Association is at present issuing a series of little tracts on health and cleanliness, &c. for distribution amongst the working and other classes in Manchester and Salford, and which appear to be capable of doing a great deal of good.

MACHEN CHURCH, SOUTH WALES.—Messrs. Habershon, Architects.

NEW CHURCH AT MACHEN, SOUTH WALES.

THE church represented by our engraving, has been commenced at Machen. The first stone was laid by Mrs. Augustus Morgan, wife of the Rev. Augustus Morgan, rector of the parish, and chancellor of the cathedral church of Llandaff.

The church, which is designed by Messrs. Habershon, is in the Early English transition style, and has a chancel, vestry, porch, and spire. The entire length of the building is 78 feet, and the height of spire 80 feet. The walls will consist of a grey stone from a neighbouring quarry, enlivened by Bath stone dressings. The church, when completed, will accommodate 300 persons. The contract is 1,500*l.*

PROGRESS OF MELBOURNE.

A RECENT emigrant to Australia writes so as to enable us to give some interesting particulars as to the city of gold diggers. The main part of Melbourne comprises numerous streets, already densely crowded with houses, shops, and stone warehouses or stores; but in pleasant vicinity to these there are open spaces, such as Carlton-gardens to the north, Fitzroy-square to the south, and Victoria-parade running diagonally between the two. The whole of the city is divided into sections, and each section is again subdivided into twenty allotments. Some idea of the extent of these sections and allotments may be had from details in reference to the neighbourhood in which the writer resided, at the west end of the town. Between Spencer-street westward, and Spring-street eastward, Collins-street to the north, and Flanders-street to the south, there are eight sections. Each section from west to east is 660 feet, and from north to south, 677 feet, including in the latter a "little" street of fifty feet wide, cut out of the section. All the streets not called little, are 100 feet wide.

"By these particulars," continues the writer, "you will be able to judge of the size and extent of Melbourne, which, you will say, is a tolerably fine child for its age."

The division of the city into sections and allotments was made by the Government. Each allotment into which the sections are divided, except the corner one, is 66 feet wide, by 313 feet 6 inches deep. The corners are 156 feet 9 inches from north to south, and 132 feet from west to east. "You will see," it is remarked, "how very easy it is to describe a piece of such land in a deed, as—'All that piece or parcel of land, being part of allotment 3, of section 4, City of Melbourne, commencing at a point which is 20 feet east from the south-west corner of the said allotment,' &c."

The following particulars and suggestions in reference to emigrants' houses, framed in this country, merit quotation.

"I have purchased a piece of land for 200*l.* 45 feet by 90, in the suburbs, on which I placed the house I brought out with me, purchased of Manning, of Holborn. For the sort, it is a very excellent house. I have made additions to it, and when finished, it will have eight rooms and a kitchen, with store closet. I think you might suggest in your *Builder* some improvement on emigrants' houses. The great fault is, that they are too *low*: the pitch of my rooms is only 8 feet high, and they ought to be at least 10 feet, recollecting that for many days and weeks in summer we have the thermometer from 90 to 100 in the shade. It has been 97 in our sitting-room, on the shady side. The roof is a great difficulty, also: mine is now covered with ¾-inch deal boards, thin canvass, and over all tin tiles painted. It will make a water-tight roof, but it may be very hot, so that suggestions might be made as to ventilation."

Labour is still very high at Melbourne. Bricklayers and masons are obtaining from 30*s.* to 35*s.* a day: carpenters, 25*s.*; plasterers, 40*s.*! "If I wanted my rooms lathed and plastered," our friend adds, "they would cost me from 8*s.* to 10*s* a yard—a fearful price."

Rents are enormous. The *Melbourne Morning Herald* states, that "a stone store near the wharf, of 20 to 25 feet frontage, fetches 1,700*l.* to 2,000*l.* a year; and sums that bear no relation to any scale, real or imaginary," it is added, "have been paid for eligible sites for public-houses. These seem to offer the royal road to fortune-making. There are over 230 public-houses in Melbourne alone." As for lodgings, it is a decided advantage for "four or five respectable young men" to have the blessing of "a room to themselves."

Many new public institutions and buildings are talked of, and a few on the way to realization. Amongst the buildings spoken of we observe a project for building an exchange, waterworks making good progress, custom-house talked of, a university "not yet commenced," but the foundation about to be laid by the new governor, a plan for very extensive council chambers and offices for the two houses to be created under the new constitution decided on, churches springing up everywhere, large hotels and stores building, &c. &c. "In a principal street, but not in the best part of it, a ground-rent of 12*l.* per foot per annum was lately asked, and permanent buildings stipulated for; while at a distance of a mile a suburban site, for temporary buildings, fetched 3*l.* per foot per annum. Land in Bourke-street, now the second or third thoroughfare, was not long since sold for 237*l.* per foot."

A NEWSPAPER'S NOTION OF DISTRICT SURVEYORS.

IN the last number of the *Illustrated London News* there occurs the following passage with reference to a new house building in Cheapside:—

"Our district surveyors have, we fear, no power, and if they had, are generally too much interested in a large expenditure of stone and brick to restrict height, and too barren of taste to forbid excrescences."

This gratuitous and unfounded sneer is so unlike the usually moderate and just views of this paper, that it calls for observation and correction.

It is true, as the writer anticipates, that the district surveyors have no power to restrict the height to which this house is being carried, and in this free land it would be a monstrous stretch of power if they had. If, then, they are powerless under the Act to prevent the evil complained of, why need the writer travel out of his way to impute improper motives and attribute a want of taste?

The expenditure on the "stone and brick" in no way affects the fee which the Act of Parliament authorizes the district surveyor to receive: he has, therefore, no interest in adding to the cost of the house. On the subject of taste necessary to control "excrescences," I think the district surveyors, as a body, are quite as likely to possess it as the anonymous correspondent of a paper. T. H. W.

PROVINCIAL NEWS.

Datchet.—An improvement, at Her Majesty's expense, is being effected at the river's bank just below Victoria Bridge. For above 200 yards dwarf wooden piling has been driven in to resist the encroachment of the Thames, and beyond this the bank has been sloped off to the river's brink, giving this part of the Home Park an improved appearance. A new road from this point to the Slopes is also in course of construction. On the Datchet side a large double culvert is being made in the new high road, to take off the water in flood time.

Great Berkhamstead.—On Thursday week, the old Market House here, and its contents, were totally destroyed by fire, believed to be the work of an incendiary, and a reward of 100*l.* has been offered for his apprehension.

Southampton.—The new graving dock approaches completion, and is expected to be opened the first week in October. When finished, according to the *Hampshire Independent*, it will take in steam-ships of 5,000 to 6,000 tons burden. The dock is 430 feet long on the blocks, 80 feet wide at the gates, and 88 feet at the centre. The depth of water over the sill will be 24 feet at high water of spring tides, and 20 feet at high water of neaps. The pumping engines for emptying the dock are of 100-horse power, working four pumps each, of 54 inches diameter, and it is calculated that with such a ship as the *Himalaya*, docked at spring tides, the dock may be pumped dry in about three hours. It can also be filled again in about half an hour. The contract for dock and engine-house was taken by Messrs. G. Baker and Co., and that for the engines and pumps by Messrs. Maudslay, Sons, and Field, and the cost of the whole will be under 60,000*l.* The work was commenced in May of last year. It was designed by Mr. Alfred Giles, the Company's engineer. The material of which it is composed is brickwork, with stone copings, similar to the smaller dock constructed seven years since by Mr. Giles. The difference in cost between a dock of this magnitude built of brick and one of granite would be very great, and the Danish Government, according to the local paper just named, are about to adopt the principle, by constructing a large dock at Copenhagen under the superintendence of the same engineer.

Ventnor.—Tenders have been received for the erection of the proposed national schools and residence at Sandown. The tender of Mr. Pelley, builder, has been accepted for the carcase only at 692*l.* The building is to be carried out from the designs, and under the superintendence of Mr. Woodman, of Brighton, architect.

Lymington.—A pile of buildings, in the Elizabethan style, of brick and stone, with bell-tower of the latter material, and comprising school-rooms, houses for master and mistress, play-grounds, offices and outbuildings, has been recently erected at Pennington, near this town, and suitably endowed, by Mrs. Pulteney, of Lyndhurst, for the children of the national schools.

Devizes.—At Monkton, a few days since, on removing a large Sarsen stone that impeded a plough, four or five skeletons were found deposited in a well-formed cist or chamber, cut in the natural soil, and paved with small pieces of the same sort of stone. It is supposed to be of very early formation, and to carry us back to the time when the adjoining temple of Abury was constructed.

Birmingham.—The corner-stone of the new schools in connection with the Carr's-lane Town Mission Chapel, in Bordesley-street, was laid on Monday in last week. The edifice will cost 700*l.* of which only 250*l.* are at present subscribed.

Macclesfield.—The opening of the New Public Park is fixed for October 2nd, when a grand *fête* in honour of the occasion is anticipated. The park covers an area of sixteen acres, and contains a bowling-green, two cricket-grounds, and a gymnasium. It is expected that by the time the opening takes place, the entrance-lodge, designed by Mr. Stephens, architect, will be completed, as well as an erection for horticultural exhibitions, formed principally of glass, after a design by Mr. Pugin. There will be a grand musical entertainment at the opening, an orchestra being erected for 200, besides which several bands will be engaged.

Rhyl.—On Tuesday week the first portion of the foundation of the new Town-hall and covered market accommodation was laid down.

Holyhead.—There have been a few casualties of late at the mountain in course of excavation for the new harbour works. On Thursday week a labourer was killed. A crane-chain snapped asunder, and a stone, about two tons weight, fell on the poor fellow, and death was instantaneous. It is said to be rather a singular coincidence that his brother was killed that day twelve months in the same manner. Last Friday at the same works a man was buried in one of the pits of the mountain, and up to Saturday evening could not be got out; several men excavating for him. Two more men were seriously injured at the same place last Friday. One of them has since died.

Chester.—The site of the Theatre Royal of this city, according to the local *Chronicle*, is now covered with the rubbish and remains of the old building, and when this is cleared away, the floor, roof, and walls will be the only parts left of the theatre that was, which is to be replaced by the new music-hall.

Liverpool.—The foundation-stone of St. Mark's new schools, in connection with St. Mark's Church, has been laid by the mayor.

Beighton.—The erection of a national school and teachers' residence, in connection with the Church of England, has recently been com-

menced at Beighton, near Sheffield, for the instruction of the children residing in the parishes of Beighton and Hackenthorpe, and situate about midway between these districts. The site, containing about an acre of ground, is pleasantly situate, fronting the road leading from Beighton to Hackenthorpe. The corner-stone was laid on 28th ult. by Earl Manvers, of Thoresby-park, who presented the site. The building comprises a school-house, 68 feet by 18 feet, with separate porches for boys and girls. The teachers' residence adjoins the schools. The material is dressed wallstone, with ashlar dressings; and the design is in the Tudor style of Domestic architecture. The entire cost of the erection, exclusive of site, is 650*l*. Mr. Samuel Worth, of Sheffield, is the architect; and Mr. Miles Barber, of Balbro, the contractor.

Dronfield.—The first stone of a monument to the memory of the late Sir Robert Peel, as the successful champion of free trade, was laid here, on the site of the old market-cross, on Wednesday in last week, by Mr. E. Lucas.

Derby.—Plans have been prepared by Mr. H. J. Stevens, architect, for the conversion of premises, and erection of new buildings, into an establishment of baths and washhouses, suitable to a population of 20,000, at a cost of about 4,000*l*. The corporation, however, have not yet decided on carrying out the plan.

Castle Donington.—The foundation stone of the parish schools was laid on Tuesday in last week. The schools are in course of erection on the hill leading to the ruins of the ancient castle of Donington. The buildings comprise a boys' school and a girls' school, with a class-room to each, separate porches, and necessary offices, a master's house occupying the lower portion of the basement story. The rooms are capable of accommodating 100 boys and the like number of girls. Their dimensions are 47 feet by 18 feet: they are placed alongside, and communicate with each other by a large opening with moveable shutters, so that the whole can be thrown open and used for a public occasion, when there will be an available space of 94 feet by 36 feet. The style is that of fourteenth century, the building being of brick with stone dressings, with gables having large trefoil headed stone windows. Mr. T. C. Hine, of Nottingham, is the architect, and the contractors are Mr. Cresswell, Mr. Doughty, and Mr. Garton, of Castle Donington.

Bradford.—The walls and ceiling of the news-room of the Exchange buildings, have been decorated by Mr. E. Haley, as the Bradford Library in Darley-street has also been.——The Peel statue for Bradford, is nearly completed, according to the local *Observer*, which states that Mr. Behnes is shortly to be at Bradford to make arrangements for its erection.

Darlington.—The opening of the new building, erected (at a cost of 2,500*l*.) for the purposes of the Mechanics' Institution, was celebrated on Friday in week before last, when Mr. H. Pease, the president, delivered an inaugural address. He was followed by Professor Nichol, of Glasgow, in a discourse on the "Immensity of Creation." Various other gentlemen addressed the meeting.

Shields.—The Northumberland Dock, says the *Shields Gazette*, has now been in progress nine months, during which time a large coffer dam has been made, 1,300 feet in length, at great labour and risk: it is perfectly water-tight. There is an immense excavation now going on in the inside of the dam, fully 30 feet in depth below high water, in order to get in the foundations of the lock and entrance basin. This excavation turns out to be a solid mass of gravel and clay mixed, and so very hard that it has to be blasted with powder, and already upwards of two tons have been used for that purpose. The pile-driving for the foundation of the lock gates is already in progress: it requires great force to get the piles down. The placing of concrete for the foundations is in progress, and the first stone of Cornish granite will shortly be laid.

Edinburgh.—The present buildings occupied by the General Post-office establishment in this city having at length become too restricted for the increased and increasing business, notwithstanding repeated additions made with difficulty on its craggy and inadequate site, it has been resolved, it would appear, to erect a new post-office on some other site. Several localities have been under consideration—one on the north side of St. Andrew's square, another in Princes-street, adjoining the Register-office, and a third also at the east end of Princes-street, but on the opposite side of the way, and closely adjoining the railway termini. The last is decidedly the most eligible as well as central of these three sites; and a handsome public building, such as the General Post-office ought to be, would not only be effectively displayed on so open a space, but might itself be made to form a fine termination to Princes-street, as seen from the west, if placed there. The site is in the hands of the Perth and Dundee Railway Company.

Arbroath.—At a recent meeting of council it was resolved, that, in order to secure an efficient ventilation to the new market buildings (now rapidly advancing towards completion), the windows should be placed in moveable sashes, instead of being provided with a single moveable pane each. The building is to be lighted from the roof. Estimates for the widening of the Brothock-bridge were considered, and that of Messrs. Maxwell, amounting to 240*l*. accepted. A tender for the execution of the Shambles extension, by Mr. G. Caird, was also accepted. The cost of the improvements at the Shambles is calculated at 207*l*. The Provost moved that the sum of 100*l*. be set aside for the purpose of obtaining a survey of the district, and arriving at information regarding the best and cheapest method of having a plentiful supply of water. The motion was unanimously agreed to.

St. Helier's.—The contract for the works necessary for the improvement of Regent-road, according to the *Jersey Times*, has been assigned to Mr. Thomas Dorey for 190*l*. Besides that of Mr. Dorey, there were five other tenders, the highest of which was 270*l*.

CHURCH-BUILDING NEWS.

Knaresborough.—On 8th ult. the first stone of the new church at Knaresborough, dedicated to the Holy Trinity, was laid by Mr. B. T. Woodd, M.P. The site is a pleasant one at the high end of the town, behind Briggate, and was given by Sir Charles Slingsby, Bart. From its elevated position the church will be seen for a great distance from the town. The building is calculated to accommodate 800 persons, *i. e.* 600 adults and 200 children. The principal and best seats will be free. The church will consist of nave, aisles, and chancel, with tower and spire at west end of north aisle, and a north porch adjoining thereto. At the east end of north aisle there will be an organ, chapel, and vestry, the former having arches opening into the north aisle and chancel. The font will be placed in the tower, which will also have arches opening into the church. The designs have been prepared by Mr. Joseph Fawcett, of Knaresborough, architect, in the early period of the Decorated style. All the windows, including those in the clerestory, will be enriched with geometrical tracery. The estimated cost is about 3,000*l*. without the spire, which is not included in the present contract, but will cost about 600*l*. additional. The funds have been raised by voluntary subscriptions, aided by grants. More, however, is required in order to complete the work, by raising the spire, and it is hoped many will be found liberally disposed to aid the good work to the utmost of their power.

Greatford.—The re-opening of the parish church of Greatford, after complete restoration and repairs, took place on Thursday week. On the old pews in the nave being cleared away, the flooring was found resting on the bare earth, and was removed: the vaults were repaired and made secure, and sleeper walls constructed for the new floor, which is of inch deal battens on oak side pieces, and having a free circulation of air secured underneath. The seats, which are of oak, and open, are quite plain, without tracery, the mouldings continued down the sides. In the north side, a new window has been inserted at the cost of one of the parishioners, and is filled with Hartley's quarry glass. The west window has been filled with glass (also at the expense of a parishioner), by Ward and Nixon; subject, "The Baptism of our Saviour." The walls have been stripped and fresh plastered, and the stone-work throughout has undergone a course of repair. The aisles are laid with red and black Staffordshire tile, in 6 inches concrete. The outer doors are new and of oak, as are also the steps. The transept is filled with seats similar to those in the nave, having the harmonium in front. In the chancel a new arched roof has been put upon the walls, which have been raised about 2 feet. The flooring is of Minton's encaustic tiles. The east window has been taken out, thoroughly restored, and filled up with Hartley's quarry glass. The three lancet windows near it have been filled with stained glass, each the gift of an individual, and also a two-light memorial window has been erected by the Willis family, representing the two apostles, St. Paul and St. Peter. The architect was Mr. Hawkins, and the contractors, Messrs. Ruddle and Thompson, of Peterborough. The cost is expected to be about 800*l*.

Thurgarton.—The priory church of St. Peter has been restored. Previous to the restoration, the church consisted of the present tower and a portion of the nave. The niches in the latter were built up, the great west doorway filled with glass, and a gable-wall, about 56 feet from the same, uniting the nave piers at this point, formed the east end. The present restoration has been confined to such an extension of the old building as was necessary to fit it for the purposes of a parish church, and consists of a new chancel, a north aisle 18 feet by 36 feet, a porch, and an organ recess. The nave has been elevated and new roofed, and a defective portion of the tower rebuilt, and all the old masonry repaired. The pulpit and font are of Caen stone, carved. The church is fitted up with benches of solid oak. The chief cost of the buildings and fittings done has been defrayed by Mr. Milward. The organ, built for the purpose by Messrs. Grey and Davidson, of London, was the gift of the incumbent, the Rev. H. Guillebaud. The cost of the restoration will exceed 2,800*l*. of which sum Trinity College, Cambridge, have promised to contribute 250*l*. The architect employed was Mr. T. C. Hine.

Yarmouth.—The church restoration committee have resolved on completing the restoration of St. Nicholas's Church and fitting up the chancel for divine service, so soon as funds can be provided, on a plan prepared by Mr. Hakewell, architect. It is proposed to erect five new churches here. Towards carrying out the work certain sources of revenue would be available. Lord Ashley's commission, which investigated the state of the town, reported to Parliament that means should be provided out of the proposed fund to build three churches in Yarmouth. The chairman of the restoration committee (Rev. G. Hills) presented the following table to the meeting at which Mr. Hakewell's plans for the restoration of St. Nicholas were taken into consideration, in order to show the intention on the subject of the proposed new church accommodation:—

Name of Church.	Population of District.	Accommodation proposed.	Cost.
St. Nicholas' alterations and fitting up chancel	10,000	4,000	£1,500
St. Peter's	4,000	1,800	—
St. George's	4,000	1,100	—
St. Andrew's (south end)	2,000	500	3,000
St. James's, near Mr. E. Preston's old house	2,000	500	2,000
St Philip (between the factory and Roman Catholic Church)	1,800	500	3,000
St. Thomas, near Holkham (for Beachmen)	1,500	500	3,000
St. John (north end)	1,500	500	2,000
Population of Yarmouth .	26,800	9,400	14,500
Present accommodation.....	5,800		
Proposed increase	3,600		
	9,400		

Hogsthorpe.—The church here, after undergoing considerable alterations and repairs, was re-opened on Wednesday in last week. The restoration of the church, which is in the Early English style, and dedicated to St. Mary, commenced about eighteen months ago. The old pews have been entirely removed, and their space occupied by square-headed open benches of stained wood, the workmanship of which has been performed

by Mr. Stephenson, of Hogsthorpe. On the south side of the church, stained glass windows have been introduced, and a new east window, by Mr. Hibbitt, of Alford, is ready. The total expense of the alteration and improvement of the church amounts to between 700*l.* and 800*l.* and about 500*l.* of this amount, according to the *Lincolnshire Chronicle*, has already been raised by private subscriptions and donations.

Shottesbrooke.—The church of Shottesbrooke, Berks, was re-opened on 25th ult. It is built in the form of a Latin cross, the chancel, contrary to precedent, being longer than the nave. The work of restoration was entrusted to Mr. Wyatt, builder, at Oxford, under the superintendence of Mr. G. Street, architect. In the middle of the church rises a tower, surmounted with a spire, 150 feet in height. The screen is of stone. The chancel is paved throughout with encaustic tiles, taken from the old patterns. The pulpit is formed of Derbyshire alabaster, inlaid like mosaic work, with the different coloured spars of that county. All the roofs are open, and made of oak and Spanish chesnut. The seats are oak, and open. The altar tomb of Sir William Pressell and his lady, who founded this church in 1337, is built in the north transept. On the outside finials adorn the ends and the porches. The nave and the transept are paved with red and black tiles. The work of restoration has cost 1,200*l.* raised by the rector, the Rev. C. Vansittart. Mr. Minton presented a reredos. Generous Mr. Minton!

Lewknor.—A stained-glass window, by Hardman, has been put up in the east window of the church of Lewknor, in Oxfordshire, by the Rev. E. B. Dean, D.C.L. vicar of the parish, in memory of his father. It consists of five lights. In the centre is the figure of our Lord on the cross: at the sides stand the Virgin and St. John; while in the outside lights are Archbishop Chicheley, founder of All Souls' College, to which the living belongs, and St. Margeret, the saint to whom the church is dedicated.

Bewdley.—A plain marble monument to the Dowager Lady Winnington has just been erected in Stanford Church. It was designed and executed by Mr. Joseph Stephens, of Worcester, sculptor.

Llangwyllog.—The church of Llangwyllog, in Anglesey, was reopened for divine service on the 20th ult. the whole having been renewed with the exception of parts of the outward walls, repewed with open and free seats, and painted under the direction of Mr. D. Roberts, architect, Beaumaris.

Preston.—A monument has recently been placed in the chancel of St. George's Church, Preston, in memory of Mr. T. M. Lowndes. The style is Gothic. It commences with four octagonal corbels, from which spring clustered buttresses, supporting a projecting canopy, with crocketted arches, pinnacles, panels, pateras, pendants, &c.; the whole surmounted by a cornice, moulded, carved, and panelled, with projecting canopies at the angles. The artist was Mr. Duckett.

Wakefield.—The new church of St. Mary, Wakefield, was consecrated on Tuesday in last week, by the Bishop of Ripon. The church is situated at the top of Charles-street, Primrose-hill, near the Lancashire and Yorkshire Railway station. The foundation-stone was laid in August, 1853. The edifice has been erected from designs and plans prepared by Mr. C. Clapham, architect, Wakefield. It is in the Early Decorated style, and has a tower and spire 113 feet high. The interior consists of a nave and chancel, two side aisles, an organ chapel, and a vestry. There is no gallery, and the pews, or rather open stalls, are all free, and of stained deal. Accommodation is afforded for about 400 adults and 220 children. The cost of the building was 2,000*l.* exclusive of site. Of that sum 1,150*l.* has been received from Government grants, and the rest from private subscriptions, but a small sum is still required. Active endeavours are being made, in order to obtain funds for the erection of a parsonage-house, and 335*l.* has already been subscribed for that purpose, exclusive of 200*l.* from the Gally Knight fund, which will be paid if the entire sum can be raised by 1st January next. It is also contemplated to build a school with as little delay as possible.

Powick.—The west window of this church has just been decorated with stained glass. The principal lights contain the effigies of the four Evangelists, and in panels underneath their symbols are displayed. The tracery is filled with angels bearing scrolls with inscriptions. The window has been presented by Mrs. Morton, in accordance with the wish of her late husband, Mr. W. Morton, of Kent's Green. It was designed and executed by Mr. George Rogers. The stonework of the window, as well as of the monument, a Gothic canopied one in the Decorated style, was erected by Mr. Joseph Stephens.

THE WINDOW IN BUCKLAND CHURCH.

A few words will suffice to reply to Mr. W. Harvey, in reference to the so termed confessional window in Buckland Church. Your correspondent is in error in supposing it to be an extraordinary case. In my career, extending over some years, as a restorer of church architecture, I have met with many similar specimens of the olden time in sacred edifices, and I beg leave to inform Mr. Harvey that the prevalent opinion among antiquaries is, that the part of the church which he considers was used for the confessional was the place where lazars were permitted to assemble and join in the worship of the Almighty, without the danger of communicating their diseases to the rest of the congregation. This view of the case is, I think, justified from the formation of the windows, the lower part of which was never glazed, but supplied with shutters, which the upper or glazed parts lacked; also, as in the case of the Episcopal Chapel at Needham-market, in Suffolk, the ground from the window is generally so much lower than the floor of the building, that steps, or rather the remains of them, can be seen in most places, leading from the outside; and principally from the fact that there are such windows in many churches, contiguous to which no nunneries were ever placed. Nemo.

STATE OF THE WELSH CASTLES AND ABBEYS.

I am glad to see that the communications in your paper some months back respecting the condition of the interesting ruins in North Wales has in some instances been of use in inducing their owners to take some measures for their better preservation.

Perhaps you will give me space for noticing a cause of their dilapidation which I think is not generally known, and which cannot be guarded against by ordinary fences, such as are used for their preservation. My remarks apply more especially to the remains in the valley of Llangollen, though they are probably in a great measure applicable to other ruins.

I have made many careful surveys of the ruins of Dinas Bran Castle, and I am fully persuaded that the common impression that it is a rudely-constructed building of the local slaty stone is incorrect; and that it has been a carefully-finished structure, with quoins, vaultings, string-courses, and windows of wrought freestone. This stone having been found by the peasantry useful in building ovens and chimneys, for which the local limestone and slate are unfit, they have quarried and mined out almost every fragment, and the result may be easily imagined. When basetables and set-offs and string-courses (which doubtless were used of great depth to serve as bonding to the rubble-work) have been torn out, and the quoins, window-jambs, and groining dug out of the walls, and even steps broken short off in the walls, there can be little wonder that the ruin should have a rude and rugged appearance.

Though the freestone is now easier to obtain than it was some years back, the work of destruction has by no means ceased, and unless some means are taken to underpin the walls where they are mined, this picturesque ruin must very shortly cease to exist. I have seen, in the house of a gentleman residing below the castle, pieces of stone rolled down the hill on moonlight nights which once formed the richly-moulded groining of the gateway: a few traces of this groining still remain in the gateway-wall, but so defaced by pickaxes and crowbars that I was only able to identify the fragments by a perfect piece in the wall about a foot long. I have a print of this gateway dated about the middle of last century, showing it with two round towers perfect to its battlements, and with a stone bridge crossing the moat. The latter has disappeared entirely: one tower is razed to the foundation, the other reduced to about one-third of its original height. The mouldings prove it to have been Early Decorated work of the best period. Valle Crucis Abbey has not been subjected to the same undermining and sapping process, as the bulk of the work has been freestone, which had only to be picked up from the fallen walls and carted away, and the small remains of a religious house at Penywern have been saved only because wanted for a barn. The church at Llangollen, which possesses a massive oak-roof of Late Perpendicular date, almost covered with rude carved work, is also in a sad state of decay, and has suffered much by "improvements." A rich screen was cut down about fifteen years ago, and it is a remarkable fact that a very considerable number of the massive oak screens which formerly existed in the churches of North Wales have either been cut down to the level of the pews, or wholly destroyed, within the last twenty years. C.

DEMAND FOR CAST-IRON PIPES.

The following statistics of the present and prospective demand for castings for gas and waterworks, has been furnished us by Mr. Thomas Edington, inspector of castings, Glasgow.

Contracts taken, August, 1854:—Melbourne, 20,000; Liverpool, 3,000 tons, water-pipes. Contracts advertised during August, 1854:—Chelsea, 11,500 tons water-pipes; Preston, 2,000 tons water-pipes; Oxford, 1,170 yards water-pipes, three tons bends, &c.; Hamilton, 4,130 lengths water-pipes, &c.; Melbourne, 19 miles of main gas-pipes, &c.; Bangor (Ireland), castings for a gas-work; Newport (Monmouthshire), four gas purifiers, &c.; Malvern, 12,450 yards of main gas-pipes, &c. fifty street-lamps, retorts, syphons, &c.; Mile-end Old-town, thirty lamp-posts; Southport, 3 miles main water-pipes; York, and Armagh (Ireland), gas-pipes, &c.; Enfield and Birmingham, water-pipes; Queenstown, gas-pipes, lamp-posts, &c.; other castings will be required for Calcutta, gas; Valparaiso, gas; Liverpool, gas; Wallasey, water; Grantham, water; Grimsby, water; Kelso, water; Haverhill, gas; Beccles, gas and water; Halifax, water.

THE ARCHITECT OF ST. GEORGE'S HALL, LIVERPOOL.

On Saturday last, a number of gentlemen connected with the town met at the Adelphi Hotel there, in order to consider the propriety of giving some public expression of the respect entertained for the late Mr. Elmes, the architect of St. George's Hall and the assize courts. Mr. William Brown, M.P., was called to the chair. In opening the proceedings, the chairman said he could not help feeling as all must feel the loss which the country had sustained in the death of Mr. Elmes, who had placed a building in the town which must be the admiration of every man of taste, come from whatever part of the world he might. All must deeply regret his loss at so early a period of life; but there were other duties which they had to perform, to express their gratitude and respect for his memory by endeavouring to render any assistance that might be required to those dear to him whom he had left behind.

The following resolutions were passed:—

"That monuments of architecture having ever been esteemed amongst the most decisive evidences of the civilization of an age and country, this meeting rejoices in the great work of St. George's Hall, now accomplished by the liberality of the town and corporation of Liverpool, and by their discrimination in selecting an architect competent to embody their views."

"That this meeting, in acknowledging the remarkable qualifications of the late Mr. Elmes for that important task, and their obligations to them, deplore his premature demise as a public loss, as well as a private calamity to his family and friends, and deeply sympathise in the privations which have been thereby inflicted on the latter, and of which they have not till now been accurately informed."

"That this meeting, being desirous of giving expression to both these convictions, proposes, firstly, the erection of some suitable memorial to the genius

and services of the late Mr. Elmes; and, secondly, to raise by public subscription, or otherwise, a fund, the better to enable Mrs. Elmes to educate her only son, in the hope that at some future period he may emulate the abilities of his father."

A committee was formed to carry out the resolutions. Professor Cockerell and several of the Liverpool architects took part in the proceedings. We hope the subscriptions will not be confined to Liverpool.

CONSUMPTION OF SMOKE.

I have been looking for some notice in the *Builder* of the plan now, and for the last month, in operation at Messrs. Wm. Cubitt and Co.'s works, in Gray's-inn-lane, for the suppression of smoke.

From the flue of the furnace, and without any alteration either of the flue or the fire-place, a flue is carried out horizontally, the original flue being stopped up immediately above the junction. From the end of the horizontal portion the flue descends. The smoke channel thus assumes the form of a Greek H. At the top of the descending limb a jet of water is introduced through a rose, the effect of which is to produce a current which carries the smoke into a receptacle below, where it condenses and floats in globules on the surface of the water. The superfluous water passes off in a clear state, and the gases which accompany the smoke are drawn back by a pipe into the furnace.

The operation of this simple contrivance has been found unexceptionable: it has economized the fuel to the amount of above 50 per cent. and the product is useful and marketable, viz. lamp-black. I have reason to believe that this invention is not palatable to some of the great producers of smoke. It discloses too readily how the law may be enforced without leaving them the retort of "impossibility," "oppression," &c. &c.

The patentee is Mr. Manley, a Cornish miner.

X.

*** This arrangement has not escaped our notice. We had prepared a diagram to illustrate it, but are forced to postpone it. Our correspondent omits one not unimportant point in his description,—the underground receptacle for the water communicates with a sewer.

Miscellanea.

The Government Business Offices.—Some of your correspondents have recently been drawing attention to the deplorable state of matters connected with our national public offices, and especially to the neighbourhood of Downing-street. For the last twenty five years no administration has had the courage to look matters in the face, and put an end to the miserable combination of makeshift and extravagance involved in the want of common convenience for carrying on the business of an empire like our own. Would such a system be tolerated in any other capital in Europe? In addition to the various suggestions made in your valuable publication in the way of remedy, I would submit the desirableness of uniting in one locality all offices more especially connected with the Houses of Parliament. For this end what can be more obvious than the removal of the south side of Bridge-street, and completing the design of transforming New Palace-yard into a magnificent quadrangle. The present unfinished Clock-tower was clearly intended to form an important feature in a continuous pile or range of building, insulating entirely her Majesty's Palace of Westminster and its appurtenances.—H. T.

"The Man named Wood."—Pray allow me to draw your attention to your page 466, containing an abstract of a paper read at one of the meetings of the British Archæological Association, by Mr. Freeman. In this extract will be found these astounding words—"*a man named Wood.*" I am sure, when Mr. Freeman's attention is drawn to it, and he is told who this man was, he will withdraw the expression. That man was John Wood, the architect of those classical façades and buildings at Bath, Bristol, Clifton, and Liverpool, which are admired by the learned architects of England and France. The attention lately given to the study of mediæval art has done great good; and our noble cathedrals are now being reinstated as they should be, painting excepted. But we must not, however, forget, that classical art is the highest class of art, and is the foundation of all other art. It is also the only style of art that is proper for the great cities of this country. The many structures now rising in our cities show the liberality of our citizens, and the activity of our great *entrepreneurs;* but, at the same time, we must regret that they show a great want of John Wood;" and whilst we lament the mistake he made at Llandaff, let us hope that we may have some like him to instruct us in the high art of classical architecture applied to modern cities.

Michael Meredith.

Gases of and for Combustion.—Mr. C. Chenot, of Paris, has patented some improvements in accumulating, conducting, and treating gases of combustion, and also in generating and applying the same to metallurgic and other purposes. "The ends of my improvements (says the patentee) are, to impart to gases a constant richness, and also a three-fold calorific, chemical, and mechanical action." Generating gases under the influence of carbonates, he states, doubles their calorific power. Carbonic acid imparts to the gases generated an absolute richness for burning, producing the highest degrees of heat, as well as the most energetic oxidising and reducing actions. Mechanical action is insured by burning gases which are being mixed with the air at the moment of the combustion, without any previous mixture with air, which would be dangerous and incomplete.——Mr. C. P. Drake, of Boston, U.S. a practical electrician, has patented an apparatus for making gas on a small scale by mixing vapour of benzole from coal tar with common air by means of heat produced by its own combustion. "It is designed for private dwelling-houses, churches, hotels, stores, and factories, and can be made for one light or a thousand, for a common dwelling-house, occupying only about 2 feet space. The apparatus generates no more gas than is immediately consumed. The whole cost of the gas is that of the apparatus and the benzole. It is so simple that it may be managed by the dullest domestic, only requiring the weight to be wound up before use, and the generator to be filled up twice a month, or not so often if all the lights are not in use."——Small gas works are being sent out to Hong-Kong for the supply of fifty lights. This is *not* the first introduction of gas amongst the Chinese.——The price of gas at Liverpool is at length to be reduced 6d. a thousand cubic feet. The company have not only been regularly in receipt of 10 per cent. profit, the maximum allowed by their Act for many years, but have also accumulated a large reserve fund nearly to its maximum. Their 10 per cent. moreover, has been given not only upon their necessary outlay of capital, but upon large sums sunk in nearly useless extensions of pipes round Liverpool, sums which might have been got, had they really been required, at 4 to 5 per cent. interest, instead of 10. But every possible pretence for withholding from the Liverpool public the advantage of a reduction in the price of their gas having now been exhausted, and a new company on the *tapis*, the directors have been obliged to give way. A deputation of gas consumers urged that the offered reduction might safely be expected to lead to an increased consumption, and that the directors were quite in a position to make the reduction nincpence or tenpence. The directors, however, refused to make any change as to the extent of their reduction in price. The deputation alluded to the subject of testing meters, on which the directors said they would have no objection to the council appointing a competent officer to inspect them on behalf of the public, they also paying his salary.

Artificial Stone.—Mr. Frederick Ransome, of Ipswich, has patented an invention, consisting in the use of baryta, or salts of baryta, or any of the salts of lead, to neutralize the impurities arising from the soda employed when soluble silicate is used in the manufacture of artificial stone, and also in exposing such artificial stone to a bright red-heat in a suitable muffle or kiln. The efflorescence which is apt to arise from the stone under variations of the atmosphere caused by the use of impure soda, is thus, it is said, materially if not entirely obviated.

Mr. G. R. Ward has just now completed an engraving from the portrait of Cardinal Wiseman, by Mr. Herbert, R.A. It is in the mixed style of stipple and mezzotint, and is an excellent specimen of the engraver's ability. The fur and lace are especially well rendered.

Second-class Railway Carriages.—I beg, through the medium of your valuable columns, to reiterate the complaint so often urged in vain, of the non-luminous and filthy state of second-class railway carriages. Having occasion to go by the Fenchurch-street railway last night, I was witness to what *might* have proved a serious accident, occasioned entirely by the darkness of our compartment. The seats were not, as usual, in regular lines, but placed about, so as to resemble, as nearly as possible, a maze (but *without* the very necessary addition of a "director"), and a person who entered the carriage, after groping about for some seconds in search of a seat, at length hit upon what he *supposed* was one, but which really was nothing of the kind. Acting on this supposition, the aforesaid individual made a backward movement, and—"great was the fall thereof:" but though he did *rise again*, it was not without the "uncharitable" wish that the "Company" had been in his place. Now, not to say anything of the "pens" which are considered good enough for "seconds," is it not really too bad thus to treat that already much injured, but nevertheless highly respectable person,— The Public?

Antiquarian Discoveries at Yeovil, Somersetshire.—In removing the walls of the old St. John's Schools, several interesting relics have been discovered. The workmen first brought to light a stone coffin, found lying across under the west buttress of the adjoining church: it had no cover, but is cut to fit the body, with small holes in the centre to let off moisture. Near the south-east corner of the building, and imbedded in the wall, a small stone crucifix was also discovered. On one side is carved in strong relief our Saviour on the cross, with a female figure on each side, with a peculiar crocketed head: the background is coloured red, which appears burnt in, and the other parts picked in with blue and black. On the back is carved a foliated cross, also in deep relief, but not coloured. The stone is from Hamdon Hill, of coarse grain, but in good preservation: the crucifix is cut through in four places, and appears to have been used as an altar-piece. Near the spot where the crucifix was found, and within a yard of the niche and basin anciently used for holy-water, several old coins and tokens have been discovered, of Henry II. and Henry IV.'s reign. We have been favoured with some sketches from Mr. Stent, the architect for the new schools, now being built on a site adjoining the churchyard, in the Late Decorated style, but their interest being entirely antiquarian, we have not engraved them.

Promenade, Exhibition, and Concert, at Oxford.—Mr. Spires, the spirited mayor of Oxford, together with the mayoress, gave a promenade concert in the Town-hall of that city, on Tuesday evening in last week, which was attended by upwards of 900 of the more distinguished residents of Oxford and its vicinity. The Town-hall presented a brilliant appearance, the walls being hung with paintings and water-colour drawings, including some fine specimens by eminent artists. Among the most prominent objects also were the statue of "Sabrina," by W. C. Marshall, R.A. which, we understand, has been presented by the sculptor to the mayor, with a view towards the foundation of a local museum and school of art; the alto-relievos, illustrating poems by Thomas Hood, and forming part of his monument recently erected in Kensall-green, from the design of Mr. Noble, and five medallions by Mr. James Castle, jun. of Oxford, sculptor. The principal contributors to the collection of paintings, drawings, and other works of art, were the mayor, and various other gentlemen to whom they belong. The City Committee-room was appropriated to microscopes, microscopic objects, and stereoscopes, furnished by the mayor, Mr. F Symonds, and Mr. Thomas. In the Public Library a great many handsomely bound books were displayed, and around the walls hung a highly interesting collection of photographic pictures, illustrating the progress of the Crystal Palace from its commencement. The concert commenced at half-past eight, and embraced a selection of both vocal and instrumental music. On the following evening the mayor entertained all the children above ten years of age belonging to the various charity schools in the city, in the Council-chamber, in detachments of 100, after which a concert was given in the Town-hall. The paintings and other works of art with which the hall had been decorated for the previous evening remained undisturbed. On Thursday and Friday the hall was thrown open to the public, when some thousands availed themselves of the opportunity of seeing the collection of pictures, &c. We understand, by the way, it is in contemplation to present Mr. Spires, before the expiration of his mayoralty, with a testimonial, and that a committee is in course of formation with that view. He well deserves it.

The Masons' Strike at Doncaster.—The contractor having got tired of waiting till the workmen he lately employed should come to his terms, after agreeing to more than the half of theirs, has not only engaged twenty new hands already, who are actively at work on the new church, but has himself gone to a neighbouring county, where he will be able to engage the remainder of the number required. The attempts made to prevent workmen from so engaging themselves are quite inexcusable, and come with a bad grace from those who look for free trade and the cheapest market for all they themselves purchase, while they would, if they could, prevent their fellow workmen and their late employer from negotiating on similar principles.

Strike of Stonemasons.—The masons employed on the Monmouthshire Railway and Canal works have struck, the whole of them, about ninety in number, having left work. It seems that some weeks since the men turned out in consequence of alleged infringements on their rights by the foreman of Mr. Firbank. After three days' suspension, it is said, it was agreed that the foreman should be dismissed. The men then resumed work. Having, however, been informed that the foreman was to be reinstated, on his making his appearance they resolved to leave at once, and have accordingly again struck work.

TELEGRAPHIC PROGRESS. — The possibility of sending electro-telegraphic messages across or through a body of water, without the aid of submarine wires, to which we have now and then hopefully alluded, is said to have been at last satisfactorily tested at Portsmouth. The place selected for the experiment was the Mill-dam, at its widest part, and where it is some 500 feet across. Two portions of the apparatus were placed on the opposite sides of the water, each terminating in a plate constructed for the purpose, and several messages were, it is said, actually conveyed across, or rather through, the entire width of the Mill-dam with instantaneous rapidity. There appeared every possibility that this could be done as easily with regard to the British Channel as the Mill-dam at Portsmouth. The inventor is a gentleman of scientific attainments, residing at Edinburgh, according to the *Hampshire Telegraph*, but belonging to Dundee, according to the *Northern Warder*. The experiments at Portsmouth, it appears, were carried out by Captain Beatty, and other engineering officers belonging to that place. As a noteworthy fact, it may be remarked, that in the Mill-dam, and close to where the experiments were made, are two large iron drains, which discharge themselves in its centre, and that the presence of so large a body of metal, it is said, had no adverse influence on the success of the operations.

TESTIMONIAL TO AN ENGINEER. — Mr. W. G. Craig, the new superintendent of the locomotive department of the Manchester, Sheffield, and Lincolnshire Railway Company, has received from the directors and officers of the Monmouthshire Railway and Canal Company (of which he was formerly engineer), a testimonial consisting of silver salver, tea kettle and stand, tea and coffee services, spoons, &c. richly chased and frosted, from the manufactory of Messrs. Colley and Co. of Birmingham. The salver bore an appropriate inscription, beneath a crest with the motto, "*J'ai bonne Esperance.*" At a dinner which followed the presentation, a deputation from the workmen employed in the locomotive department of the Monmouthshire Railway, presented Mr. Craig with a silver epergne, representing the grape harvest.

EAST RETFORD CHURCH.—The partial restoration of this ancient edifice is proceeding rapidly towards completion. The ashlar is seriously decayed: the principal window is all but dropping to pieces. At first, the restoration committee had some thoughts of pulling the greater part down, adding a new clerestory, and putting on a new roof, in unison with those on the nave and side aisles. The expense, however, was beyond the means of the committee, who resolved, apparently, only to patch the work up. It has been said, however, that if the roof be in good repair, by being cleaned, tiled, and coloured, it may last for many years, and prove no very great eyesore to the rest of the restorations. This being the case, Mr. Lee has offered to do all the stonework, with the embattlements, two new cusped windows, canopies, pinnacles, and other ornaments, for 230*l*. It is, therefore, hoped that this absolutely essential restoration will be carried out, and that the necessary amount will be subscribed.

ESSEX ARCHÆOLOGICAL SOCIETY.—On Tuesday in last week the annual general meeting of this society was held in the National School-room, Maldon. The company was not numerous. Various articles of interest were exhibited. The Rev. C. Merivale, by request, took the chair, and the hon. secretary, Rev. Mr. Cutts read the usual report. Dr. Duncan read a paper on the history and fate of Camulodunum. The Rev. B. Lodge, of Colchester, read a brief descriptive paper on the Roman urn found at West Lodge, Lexden. Mr. Cutts then described some of the objects of antiquarian interest exhibited. Mr. King, from London, read a paper on three ancient seals found at Ravenhall, Ashingdon, and Stebbing, with notices of others. The company afterwards went to Beeleigh Abbey, when Mr. Spurrell made some remarks on the architectural history of the Abbey remains. On their return to Maldon, they visited the town-hall, the old hospital of St. Giles and the church of All Saints, which last Mr. Spurrell also illustrated by some remarks.

NEGLECT OF WORK.—On Friday week, at Bilston, 1*l*. 1s. 6d. was ordered to be deducted from the wages of William Baugh, for absenting himself from the employ of Mr. Rose, whereby he had occasioned a loss of 3*l*. Edward Walsh, a puddler, was fined 10s. and costs for neglecting his work whilst in the employ of Edward Gibbons. William Jones, Thomas Upperdine, Thomas Parton, and Matthew Jones, colliers, were charged with neglecting the work of Thomas Perry, who said that he had engaged them to work in the bond, and left on the preceding Monday, when he set them to "stint work." The men, in defence, said they had only engaged to make a gate road, which they had done. This was denied by the complainant, and they were thereupon ordered to return to their work and pay expenses.

OPENING OF ANCIENT TUMULI IN ORKNEY.—Some of the tumuli near the circle of standing stones at Brogar, in Stenness, were recently opened. In a plum-cake shaped barrow were found two stone cists, each containing an urn. In the principal or more central cist the urn was large, and cut in mica, but very frail, and not easily removed entire. It has been sent to Edinburgh, to be deposited in the museum of the Society of Scottish antiquaries. The other urn was of baked clay, and fell to pieces. A broken stone pestle and some human bones were found in these tumuli. Excavations have also been made in a large "burg," or ruin of a round tower, in the island of Burray. A broken cup of baked clay, and a portion of a rude bone wheel were discovered, with several other interesting relics. The wheel appears to have been formed of one piece of a whale's jawbone, and to have been about 10 inches in diameter. One or two of the smaller tumuli at Stenness were also opened, but nothing was found except a cist in each, containing burnt bones. The elliptical tumulus has been left until a future occasion.

HIGH LEVEL RAILWAY AT LIVERPOOL.—A high level railway has been projected by Mr. Grantham for the Liverpool Docks. The railway, as projected, would be as long as the working parts of the docks: at present they are four miles long, and ere long they will be five. The railway is proposed to consist of iron framework, supporting two platforms; the lower about 52 feet wide, and 20 feet above the present quays, entirely for woods; having four lines of railway; the upper about 23 feet wide, with two lines of railway, and entirely for passengers, who would have to ascend 35 feet, or less than the height of many existing railway stations. The lower platform would be provided with hydraulic cranes.

VALUE OF LAND NEAR THE VICTORIA DOCKS, BARKING-ROAD, IN THE COUNTY OF ESSEX.—Messrs. Humphreys and Wallen, on the 22nd instant, offered by auction, in forty building plots, the first portion of an estate of twelve acres in the above locality. The whole (with one exception) were sold, and some of the best plots realised at the rate of about 1,700*l*. per acre, the average of the whole being 950*l*. per acre. It was understood that the land was purchased but a few years since for something less than 100*l*. per acre.

STATUE OF EBENEZER ELLIOTT AT SHEFFIELD.—The bronze statue of Ebenezer Elliott, the "Corn-law Rhymer," by Neville Burnard, was, on Saturday week, placed upon a granite pedestal, at the top of the Market-place of this town. The pedestal bears the simple inscription, "Elliott." The sculptor has depicted him seated in one of his favourite haunts, upon a moss-covered stone, with wild plants and flowers wreathing around. In his right hand, which rests upon his right knee, he holds a few wheat-ears, while his left hand is placed upon an open volume by his side. The Earl of Carlisle was one of the principal subscribers towards the expense of the monument. Many, says the *Sheffield Independent*, speak favourably of the statue, but the weight of opinion seems at present to incline to the opposite direction.

PENRITH WATERWORKS.—The works were formally opened on Monday in last week. The pumps are double-acting, with 9-inch barrels and 3 feet 6 inches stroke. The water passes through filter-beds above the pumping house: it runs through glazed stoneware pipes to the pumps, whence it is pumped up to the lower reservoir. The pumps will raise 220,000 gallons in twelve hours. The lower reservoir is 154 feet above the level of the river, and 104 feet above Victoria-place, the lowest part of the town. The reservoir, on the sides, is composed of double walls. The front wall is cemented, and there was a vacuum left between the front and back walls, into which coal tar and asphalte were run in a boiling state, so as to fill up every crevice and make the tank tight. It will hold about 400,000 gallons. The higher reservoir is about 360 feet above the level of the Eamont, and will hold nearly 75,000 gallons. It will supply the highest house in the parish. The descending mains will be altogether about eight miles in length. The fire-cocks and valves have been so arranged that should a fire break out, the full power of either reservoir can be concentrated so as to pour a perfect deluge on the fire, and throw the water over the highest house. The power of the water-jet in scouring court-yards has been satisfactorily tested.

PARK WALKS AND SEATS.—Our parks are pleasant places during fine weather for a lounge and for meditation, but it has doubtless occurred oftentimes to many of the frequenters of them, that much improvement might be made in them with very little additional trouble and expenditure. Here and there a gravel-walk might be rendered extremely delightful in the summer months, and serve as a retreat from sudden showers, by training the branches of trees so as to form a verdant arch above them. Statues might be placed in central spots at the end or break of some of the walks. The present seats are, some of them uncomfortable, and all like one another. They might be made more ornamental, and a seat of larger dimensions than the rest, carved and erected at a point whence the finest view could be obtained, as a principal to the others.—F. L.

[ADVERTISEMENT.]

DARING ATTEMPT TO BLOW OPEN A CHUBB'S SAFE WITH GUNPOWDER.— Messrs. CHUBB and SON respectfully submit to their friends and the public the following letter:—

"Irk Mills, Millgate, Manchester,
September 1st, 1854.

Gentlemen,—On Wednesday night last, my counting-house, situate as above, was broken into by burglars, who, after having forced open all the drawers therein, made an attempt with gunpowder to blow open the Large Safe, which I purchased from you about three years ago, but to no purpose; the lock of the safe door, although much strained, was opened by its key without much difficulty on the following morning. From the inside appearance of the Safe, it is evident that a very heavy charge of gunpowder must have been applied, as several pieces of woollen cloth therein were burnt and otherwise discoloured. You are at liberty to refer to me for confirmation of the above statement, if required.

"I am, Gentlemen, yours respectfully,
"JOHN BLAIR.

"Messrs. Chubb and Son, 16, Market-street, Manchester."

On March 1st, one of CHUBB'S SAFES preserved Messrs. Rylands and Son's Books and Cash in the great fire near High-street, after exposure to the flames for fourteen hours; and on May 15th, another of CHUBB'S SAFES saved the Books and Notes at the fire, Store-street Mills.

CHUBB and SON, Lock and Fire-proof Safe Makers, 57, St. Paul's-churchyard.

TENDERS

For Four Villas, Walthamstow. Mr. W. Williams, architect.

Lawrence	£2,998 0 0
Sanders	2,894 0 0
Hedges	2,490 0 0
Hayne	2,410 0 0
Hocken	2,244 0 0
Clever and Stanger (accepted)	2,140 0 0
Bishop	1,580 11 0

For the Norwich Free Library. Mr. E. E. Benest, city surveyor, architect. Quantities supplied by Mr. J. S. Benest.

Murray (Norwich)	£3,349 16 7
Balls, ditto (if clamp bricks)	3,337 0 0
Steward, ditto	3,310 0 0
Lacey, ditto	3,300 0 0
Sexton, ditto	3,289 0 0
Warmon, ditto (accepted)	3,098 0 0

For building Schools in St. Leonard-street, Pimlico. Mr. Harwood, architect.

M'Currey	£1,325 0 0
Colls and Co.	1,025 0 0
Pollock and M'Lennan	962 0 0

For a Double Villa at Eltham. Mr. Hayworth, architect.

Pascal	£2,060 0 0
Pearson	1,998 0 0
Brown	1,496 0 0
Mitchell	1,425 0 0
Clever and Stanger (accepted)	1,265 0 0

For Two Villas at Anerly. Architect, Mr. Low.

Wilsher	£1,094 0 0
B. and C. Hayne	1,050 0 0
Clever and Stanger	950 0 0
Drake (accepted)	850 0 0

ADVERTISEMENTS.

TO CARPENTERS AND JOINERS.

GOOD WORKMEN are WANTED at the Parsonage, Fleet, near Holbeach, Lincolnshire.—Apply to Mr. ROBERT ELLIS, Builder, Fleet

TO PARENTS AND GUARDIANS.

TWO Architects in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter, to A. B. 16, Waterloo-place, Regent-street.

NEWPORT AND PONTYPOOL RAILWAY

WANTED, 200 MASONS, at Newport. Wages, 4s. 6d. to 5s. per day.—Application to be made to JOSEPH FIRBANK Contractor, Newport.

WANTED, ONE or TWO good CABINET-MAKERS, and a good CHAIR-MAKER.—Apply to Messrs. MARGETTS and EYLES, 137, High-street, Oxford

WANTED, a WORKING FOREMAN, to superintend a small business in the country.—Apply, with references, to W. WOODISS, East Sheen, Surrey.

WANTED, in a Builder's Establishment, an ASSISTANT or GENERAL FOREMAN, of great practical experience, and thoroughly versed in construction in all branches of the trade, with a knowledge of the use of machinery, and accustomed to estimating work and taking out quantities. To a competent person embracing energy of character, a liberal salary would be given.—Apply by letter or personally, between the hours of NINE and TWELVE on MONDAY, the 11th inst. as No. 26, Lombard-street.

TO ENGINEERS AND SUPERINTENDENTS OF RAILWAY WORKS.

WANTED, a few qualified ENGINEERS and ASSISTANTS, to superintend the construction of a railway abroad.—Applications, with references and testimonials, to be addressed, post-paid, X Y Z 3, S rand

WANTED, a FOREMAN, to superintend the erection of a small church. No one need apply who has not been similarly employed. Address, prepaid, stating terms and references, to E C 17, Hamilton street, Camden-town

TO BUILDERS' FOREMEN.

WANTED, an experienced, active Person, as an OUT-DOOR and GENERAL FOREMAN. Address, stating age, particulars, and salary required, to M N N. Office of "The Builder."

WANTED by the Advertiser, the son of a Builder, who has had considerable experience in town and country, a RE-ENGAGEMENT, as general or shop FOREMAN, or clerk of works. He is well acquainted with the several branches of the building trade, can take out quantities, measure up work, is well versed in accounts and book keeping, and the general routine of a builder's office. References as to stability, sobriety, and decision of character.—Address (prepaid) to A. B. care of Mr Barton, bookseller, New Canal, Salisbury

WANTED, by a highly respectable Man, a SITUATION as FOREMAN of a BRICK-FIELD, or would take it by Contract. Good references can be given.—Address Z. Y. X. Albert Tavern, Deptford

TO RAILWAY ENGINEERS, ARCHITECTS, AND BUILDERS.

WANTED, by an experienced Bricklayer, a SITUATION as inspector of brickwork. He thoroughly understands all kinds of brick work, and the setting out of plans, and setting out work in all the building branches. Age, 40. He can be well recommended.—Address, A. C. at Mr Potter's Stationer, 18, New Church-street, Paddington.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, a Situation as Plumber. No objection to fill up his time to painting or glazing. A good reference if required.—Address, W. P. Dando and Toolhunter 22, Gresham-street, Cheapside

TO BUILDERS, MASTER BRICKMAKERS, AND OTHERS.

WANTED, a SITUATION as FOREMAN in a BRICKFIELD, by a thorough practical Man, as any in England, in all its branches. Thorough experience for upwards of thirty-five years, both in malm and common stock work, or any red or white bricks and tiles, in close kiln work; can make, or cause to be made, any moulds or models that are required to be made use of in the work, or any machine, whether it was smith-, or any hand pug or horse pump, that might be required in the work, or any kind of harness. Age 51; steady, and a good health. No family encumbrance. Any reference can be had that might be required. Eighteen years' servitude under one firm.—Please to address to me, Mr. E. C. at the Army and Navy, Green's town, Stoke Newington-green, near London.

TO ARCHITECTS

WANTED, by an ARCHITECTURAL DRAUGHTSMAN, who has been accustomed to make finished working drawings, and also understands perspective, an ENGAGEMENT in the country office.—Address B. B. 35, Thebertonstreet, Islington.

TO HOUSE DECORATORS, PAINTERS, &c.

WANTED, by a Young Man, of great practical experience, an ENGAGEMENT as FOREMAN, or to take the management of a business.—Address, A. B. 76, Shaftesbury-street, New North-road, Hoxton. With ten years' reference. No objection to the country.

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT, by an experienced ASSISTANT, two years out of articles. Could a permanency be promised, he would accept of a low salary at first.—Address, W. X. Post-office, Little Knight Rider-street, Doctors-commons.

WANTED, by an experienced Person, an ENGAGEMENT as GENERAL FOREMAN, or SHOPFOREMAN, to a respectable builder, or to manage and superintend railway or other works. He is a fair draughtsman, and well versed in his business. Age, 35.—Address, M. D. No. 7, Bedford-terrace, Commercial-road East, London.

TO BUILDERS.

WANTED, a RE-ENGAGEMENT, by a competent BUILDER'S CLERK, where more than one is employed. The Advertiser has been brought up at the bench.—Address W. S. Office of "The Builder."

TO ENGINEERING SURVEYORS, &c.

GENTLEMEN wishing APPOINTMENTS may hear of the same by stating their abilities and sending their names and references to Mr. WM. ANDERSON, C.E. 21, Princes street, Hanover-square; enclosing a post-office order for 1l. further charge till the situation is obtained, when five per cent. to be required on the first year's salary.

THE Advertiser, an energetic man, wishes for a SITUATION, to collect rents, keep accounts, prepare working drawings, superintend buildings, repairs, and the general care of an estate. Any gentleman requiring a confidential man, who will devote his time strictly to his interest, will find this an opportunity. The advertiser has also a knowledge of land surveying and valuing.—Address, G. C., Moses Adams and Son, Surveyors, Ipsworth.

TO ARCHITECTS, BUILDERS, AND OTHERS.

THE Advertiser is open for a RE-ENGAGEMENT either as CLERK of WORKS, GENERAL FOREMAN, or SHOP FOREMAN of CARPENTERS and JOINERS. Can make out working drawings, take out quantities, estimate &c. Testimonials can be given as to quantication, sobriety, and attention to business.—Address, prepaid, to A. T. in care of Mr. Labram, grocer, &c Frances street, Tottenham-court-road.

TO BUILDERS, &c.

A RESPECTABLE MAN, aged 34, is desirous of a RE-ENGAGEMENT as GENERAL or SHOP FOREMAN, in town or country; or to superintend repairs or alterations on a nobleman's or gentleman's estate. Unexceptionable reference as to character and ability.—Address, G. L. No. 1, Trafalgar-terrace, Holloway, London

TO DECORATORS AND GRAINERS.

A YOUNG MAN, in his 22nd year, wishes to ARTICLE HIMSELF as IMPROVER, to either of the above branches. He has duly served his time to the trade. No objection to the country.—Address, A. B. 96, London-wall City.

Also several plots suitable for the erection of private residences, bounded by the river Mole, and several other desirable sites, well supplied with fruit trees, and bounded by high fruit walls

M'COLLOUGH and CO.'S PATENT FELTS, viz. Asphalte Roofing Felt for covering temporary or permanent buildings. Price 1d. per square foot.
Inodorus Felt for lining damp walls, iron houses, &c. Price 1d. per square foot.
Dry Hair Felt, for covering boilers, steam pipes, &c. which effects a saving of 25 per cent. of fuel. Prices according to thickness.
All particulars and samples furnished by J. M'COLLOUGH and CO. 84, Lime-street, City.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hironess, and brilliancy of surface: it is not affected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any sourious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has been employed in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior instead of a very superior paint, and the economy real sed by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and Co. and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William street, City; JACK and BIGBY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for fine Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in casks of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company may also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 15, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy combined with the high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently poisonous ingredients are baneful to health and worthless in use, whilst the inexperience of these imitators in the produ tion of pigments is evidenced, not alone by the coarse grainy appearance, but also by the tendency of the body in their produce which is known to the painter to be all-essential. That an imposition be not practised, therefore, a notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK —LONDON— PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks) London.

PATENT LIQUID CEMENT for Fronts of Houses, &c. This valuable and economic material is always ready for use, simple in application, and only one eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 6d. and 21s. each; casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon; ordinary colours; Mineral chocolate brown, &c.

Permanent Brilliant Black, for all kinds of outside work, barges, park railings, &c. 2s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 1s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered perfectly dry and healthy. Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

HAGAN'S NEW INVENTION.—PATENT LIQUID COLOURS, which is particularly suited for stucco fronts, halls, kitchens, bed-rooms, hospitals, schools, mansions, and all public buildings, as a perfect substitute for oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt reflects five times more light than white lead. For durability and cheapness it is the most economical which has ever been presented to the public. All from Messrs. H. and H.'s long experience in the use and manufacture of colours for coverings of every description is established to be the most right that has yet appeared.—Prepared and manufactured by HAGAN and CO. for Decorators and Painters, 222 Regent-street. Estimates given for house painting, in general.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of attained uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combines with which no eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Risher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman and Bath Cement, at their Works, situate near Bridgewater and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1834.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they are now supplied with any quantity they may require, either at his Works St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs ROBINS and CO. with much pleasure announce to the Public and the Trade, that the Cement Works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patents), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement that requires no covering. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the addition of advantages that are greatly enhanced in its cementitious properties, that it is not affected by frost, and does not set in damp situations. Any out of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institution of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Roman Cement, Hair, Lime, Lath, Tiles, Slates, and Slate Sale. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great cementation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, locks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, Trinity-square, Wharf, Paddington, and at the Works, Stockton fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. Two shell lime for mortar is better on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above is the best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-bridge, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Ariadne, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to HUGHES and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TO CEMENT MAKERS AND OTHERS

TO BE SOLD by TENDER, a SET of MACHINERY for GRINDING CEMENT, consisting of two pairs of burr-stones, a pair of rolls, devil, sack tackle, ten-horse high-pressure engine and boiler, with the wheels and gearing for driving the same, now fixed at the Phœnix Oil Mills, Dartford.

The machinery may be viewed on the Premises, and Tenders, including all expenses attending removal, &c. to be sent to Messrs EASTON and AMOS, Grove, Southwark.

MAW'S ENCAUSTIC TILE PAVEMENTS—A highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and Co. Manufacturers of THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM

in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, esq. in "Official Handbook"), send, free of expense, their pattern and price book.

Benthall Works, Broseley, Salop.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wibsea, Cambridge-shire, begs to offer Pantiles at 35s. per 1,000; Floor Bricks and 6-inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's ride from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, Rubbed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Constitution-house, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton.

N.B. Bedded-sand for the Sand of superior quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of very superior quality and colour. Address Mr. WM. WEBB, Brick-fields, Stoke Newington.

TO BUILDERS AND OTHERS.

TO BE SOLD Cheap, 200,000 superior STOCK BRICKS, lying at the Paddington Old Station, first Western Railway.—Inquire on the premises, or of W. BROOKER, Rodney-buildings, New Kent-road.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT and ESSEX BRICKS

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Pickings, &c.

KENTISH RAGSTONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Goughi), 37, Newinton-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand, plain, 30s.; Cowley Stocks 35s. at WARD'S OLD ESTABLISHED HONDURAS WHARF, BANKSIDE, Lambeth. Builders, Engineers, Gas Companies, and others, supplied with any quantity of common Bricks and Tiles goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corrugated perforated Tiles, real Dutch Clinkers, Ridge and Concrete Gravel, Roman Cement, Lime and Land and House Sand &c. &c. at the cheapest rate. Chief Office, 27, Regent-street.

TO BRICKMAKERS, BUILDERS, AND OTHERS.

TO BE LET, with immediate possession, for a short term of years, at a very moderate rent a piece of LAND, consisting of about twelve acres, and contain no large quantity of excellent brick earth, situate between new good roads, in the parish of Lambeth, and Hook-bridge, near Battle Bridge, and adjoining the Copenhagen-house, Battle Bridge.—Apply to Mr. ROBERT ALLEN, Hardy Farm, near Foot Cray, Kent.

TO BUILDERS, CONTRACTORS AND OTHERS.

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BARSTALL'S PATENT. Apply to JOHN A. S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

A PERFECTLY DRY RESIDENCE is obtained by a NEW description of FACING for BRICK-WORK, more durable than either stone or compo, and quite impervious to the character of the sun's rays. Gentlemen intending to erect detached or semi-detached villa residences, where it has been applied.—Direct to C. F. Office of "The Builder."

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSE and BLACKWELL'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

CRYSTAL PALACE GENERAL ARRANGEMENTS.—The Palace is opened on Mondays at 9 a.m and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charge for admission is one Shilling. It is opened on Saturdays at Noon, on which day the charge for admission is Five Shillings.

SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-day as follows, at 7.10, 8.10, 9.10, 9.40, 10.10, 10.40, 11.10, 11.40 a.m. and 12.10, 12.40, 1.10, 1.40, 2.10, 2.40, 3.10, 3.40, 4.10, 4.40, 5.10, 5.25, 5.40 p.m.; returning from the Crystal Palace at 11.20 11.50 a.m and 12.20, 12.50, 1.20, 1.50, 2.20, 2.50, 3.20, 3.50, 4.20, 4.50, 5.20, 5.50, 6.20, 6.50, 7.20, 7.50, 8.20, 8.50 9.50 p.m. Up Trains call at New Cross and Forest-hill. The Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London bridge, at least every ten minutes during the day, and at those hours, when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	.....	First Class, 2s. 6d.
"	.....	Second Class, 2s. 0d.
"	.....	Third Class, 1s. 6d.
Saturdays	.....	First Class, 7s. 0d.
"	.....	Second Class, 5s. 6d.
"	.....	Third Class, 3s. 0d.

In order to afford every facility to the public, and to prevent any delay at London-bridge, arrangements have been made to issue the above tickets previously at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.

Fares between London-bridge and the Crystal Palace Station, not including admission to the Palace:

Single Tickets	.....	First Class, 1s. 3d.
"	.....	Second Class, 1s. 0d.
"	.....	Third Class, 0s. 9d.
Return Tickets	.....	First Class, 2s. 0d.
"	.....	Second Class, 1s. 6d.
"	.....	Third Class, 1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 43, Regent-circus, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on visiting days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d. each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with the necessary silver.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by rail, 42. 4s. each; without conveyance by railway, 2l. 2s. (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August, 1854.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

The SALE of PREMIUM adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum assured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience by the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY. Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which nearly 140,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:

Up to the 31st October, 1853, the sums assured, including bonus added, amounted to £2,500,000
The premium fund to more than 800,000
And the annual income from the same source to 19,000
Insurances, without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

MUTUAL LIFE ASSURANCE. Important to all who desire to make provision for their families. The PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION and BENEVOLENT FUND established 1840.

TRUSTEES.

Thomas Baring, esq. M.P. | W. G. Prescott, esq.
Thomson Hankey, jun. esq. M.P. | Baron L. N. de Rothschild, M.P.

TREASURER OF THE BENEVOLENT FUND—John Abel Smith, Esq. M.P.

The Association embraces the Assurance on the mutual principle in all its branches, and offers to all classes of society peculiar advantages.—Prospectuses may be had at the Office of the Association. By order of the Board,

WILLIAM THOMAS LINFORD, Secretary.

32, Moorgate-street, August 2, 1854.

CAPITAL, ONE MILLION STERLING.
The whole Paid up and Invested for Half a Century.

GLOBE INSURANCE, Cornhill and Pall-mall, London. Established 1803.

FIRE, LIFE, ANNUITIES, and REVERSIONS.

James W. Freshfield, esq. M.P. F.R.S. Chairman.
Francis Scrivener, esq. Deputy-Chairman.

George Carr Glyn, esq. M.P. Directors.

Henry Alexander, esq. | R. Bevan, esq.
Edward Cropley, esq. | Robert Hodder, esq.
Peter Hoole, esq. | Sheffield Neave, esq.
Thomas M. Goodhart, esq. | William Smallpeice, esq.
William Dent, esq. | W. H. C. Plowden, esq.
Robert W. Gamsell, esq. | Robert Saunders, esq.
Hon. R. L. Goldsmid, bart. F.R.S. | Sir Walter Sterling, bart.
Robert Hall, esq. | William Tite, esq. F.R.S.
John Hall Tod, esq. | R. Westmacott, esq. F.R.S.
John Edward Johnson, esq. | Josiah Wilson, esq.
Richard Lambert Jones, esq. | Benjamin O. Windus, esq.

The New Tables adopted by the Globe include Two Scales of Life Premiums, Participating and Non-Participating, combining, in the most desirable manner, those principles of solidity and security which have established the Company in public favour.

Two thirds of profits apportioned as Bonus.

One-third of the premium may remain unpaid as a debt upon the policy.

Fixed rates afforded to Insurers.

Insurance to the extent of TEN THOUSAND POUNDS on a single approved life.

Every class of FIRE and LIFE Insurance business transacted.

Prospectuses, with full tables and details, and forms, may be had at the Company's offices, or of the Agents.

WILLIAM NEWMARCH, Secretary.

THE ALBERT ASSURANCE COMPANY. (Established in 1838)

MORTGAGE and other LOANS in connexion with life assurance are granted by this office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

ESTABLISHED 1838.

VICTORIA LIFE ASSURANCE COMPANY, 18, King William-street, City.

At the recent division of profits the assets were valued
At £176,861
The liabilities at 144,376

Leaving a surplus for division of £32,485

The reversionary bonuses to the assured averaged 53 per cent on the amount of premiums paid by them.

The business of the Company embraces every description of risk connected with life assurance.

Loans continue to be made to assurers on undoubted personal or other security. WILLIAM RATRAY, Actuary.

ACORN TIMBER WHARF, Canal Bridge, Old Kent-road.—RICHARD MAY informs the building public that his business in future will be carried on at Acorn Wharf. Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

HAYES, BROUGH, and CO.

Works: Llwynenion, near Wrexham.
Offices: 11, James-street, Liverpool.

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "HC.mel's Registered Model Water-closet." This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

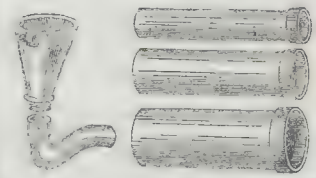
CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and only Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by



HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; as whose great nations shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for underslates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy; it is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

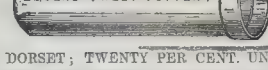
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and superior glaze, far surpassing any other manufactured of Brown Stone Ware.



N.B. These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pollard-row, Westminster-bridge, City-road Wharf, City Basin, Deptford, Bermondsey, Denver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free on application.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

STONE WARE PIPES, BENDS, JUNCTIONS, TRAPS, &c.

TERRA COTTA VASES, CHIMNEY POTS, &c. FIRE-CLAY FLUE PIPES

May also be had as follows:—

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities.

REDUCTION of PRICE in SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET; TWENTY PER CENT. UNDER LIST PRICE.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured. In Hants and Dorset they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London, Agent; or to Mr. J. HUDSON, Agent, at the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

JENNINGS'S DRAIN-PIPES.

TO LOCAL BOARDS OF HEALTH, ARCHITECTS, ENGINEERS, AND ALL INTERESTED IN SANITARY PROGRESS.

JENNINGS'S IMPROVEMENT in DRAIN PIPES removes all objections to pipe drainage. These pipes cannot be improperly laid or, in case of stoppage, they are easily examined, and a junction can be made without disturbing the general drainage.

NEARLY THREE THOUSAND FEET OF 15 INCH PIPES ARE NOW BEING MADE FOR THE CRYSTAL PALACE, AND THIRTY-FIVE OTHER PUBLIC WORKS ARE ON HAND.

Jennings's Closets, Valves, Traps, and other Sanitary Inventions, would well repay a visit to his Factory.

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

J. TYLOR AND SONS'
PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON.

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 4*l.* 4*s.*
No. 2. J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 3*l.* 19*s.*
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2*l.* 12*s.* 6*d.* With Blue Basin and sunk opal handle, 3*l.* 3*s.*
No. 4.—J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1*l.* 13*s.* Enamelled Iron Trap, extra, 4*s.* 6*d.*
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast-iron trap, and door action, 1*l.* 13*s.* Extra for Enamelled Iron Trap, 4*s.* 6*d.* This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2*l.* 2*s.* Enamelled Iron Trap, 4*s.* 6*d.* extra.
No. 6.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL-VALVE. This Valve is particularly short in its action. 1-inch Valve, with sunk handle, 1*l.* 3*s.*

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

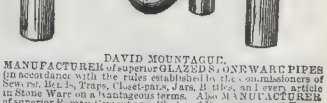
SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs, Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin. J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6 Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bibbs, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES,
FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

MILL WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Raisers, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. ARTHUR CATES,
T. W. GOODMAN, } Hon. Secs.

Lyon's Inn Hall, Newcastle-street, Strand.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The FIFTH of a COURSE of LECTURES, chiefly designed for the benefit of Art-Workmen, will be delivered at the ROOMS of the Museum, on MONDAY, SEPTEMBER 18th, 1854, "On Sepulchral and Monumental Art," by the Rev. CHARLES BOUTELL, M.A.

Hour of admission, SEVEN o'clock. The Chair to be taken at EIGHT o'clock.

Cards of invitation will be presented on application at the Museum, on any day excepting Saturday, from Ten to Four.

HENRY CLUTTON, Hon Sec

The entrance to the Museum on the above evening, will be from the Archway in Parliament-street, near Richmond-terrace.

INSTRUCTION in ART.—The AUTUMN SESSION of the NORMAL TRAINING SCHOOL of ART of the Board of Trade, Department of Science and Art, will COMMENCE 2nd OCTOBER, 1854.

Art Superintendent—RICHARD REDGRAVE, R.A.

The course of instruction imparts systematically a knowledge of the scientific principles involved in art, especially in its relation to the useful purposes of life, with the view of training masters for the local schools of art, and preparing students to enter upon the future practice of decorative art in manufactories and workshops, with or as masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to pursue scientific study without reference to a preparation for any special branch of industry. Special courses are also arranged to train schoolmasters of parochial and other schools to teach elementary drawing as a part of general education concurrently with writing.

For prospectuses, terms of admission, &c. apply at the Offices, Marlborough House, Pall-mall, London.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of submitting TENDERS for the ERECTION of a DWARF WALL, PIERS, &c. for enclosing 15 acres of land, near an addition to the Highgate Cemetery, may meet the plans and specification, on application at the Offices of the Architects of the Company, Messrs. WEHNERT and ASHDOWN, 42, Charing-cross, on and after the 30th day of SEPTEMBER next. Sealed Tenders to be delivered at the Offices of the Company, No. 21, Bridge-street, Blackfriars, on or before the 3rd day of OCTOBER next, endorsed "Tender for Dwarf Wall, &c." The Directors do not bind themselves to accept the lowest or any Tender. Satisfactory sureties will be required for the due performance of the works.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEWER CONTRACT.—The Commissioners under "The Walsall Improvement and Market Act, 1848," are ready to receive TENDERS for the following SEWERS, which are intended to be put down in Walsall, namely, a main sewer commencing opposite the Stork Hotel, in Bridge-street, extending thence to and under the open space called he bridge, along the lower part of Bradford street to the entrance to the meadows opposite the Turf Tavern, and thence along the eastern side of the said meadows to and under Tasker's lane, into the Tame, the length being about 1,021 yards. And also another sewer, commencing about the middle of Bradford street, and extending to the Turf Tavern, in the same street, the length being about 161 yards. The sections, specifications, and conditions of a contract may be inspected at the Office of Mr. CLARK, Town Surveyor, Wolverhampton-road, Walsall. Payments on account will be made once a month if desired. Sealed Tenders must be delivered at the Office of the Commissioners' Clerk, Bridge-street, Walsall, by or before TWO o'clock in the afternoon of MONDAY, the 2nd day of OCTOBER next. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to give security, with two sureties, for the due performance of the contract.

SAMUEL WILKINSON, Jun. Commissioners' Clerk.

Walsall, 5th September, 1854.

TO BUILDERS.

PARTIES desirous of TENDERING for the REPAIRS and ALTERATIONS of a LARGE FAMILY HOUSE, to be taken to pieces, on the Eastern Counties' line, may inspect the drawings and specification at the Office of Mr. MATHEWS, 200 Upper Thames-street

TO CONTRACTORS AND OTHERS.

THE COURT of DIRECTORS of the DOCK COMPANY at KINGSTON-UPON-HULL do hereby give Notice, that they are ready to receive TENDERS for the REMOVAL of the SOIL, now lying upon the spare land at the Victoria Dock, and to cart the same to Earle's Bank, the Company finding a place of deposit for the same.—Further particulars may be obtained of the Resident Engineer, at this Office; and Tenders are to be addressed to the Secretary of the Company, on or before the 4th instant.—By order,

W. H. HUFFAM, Secretary.

N.B. The Directors do not bind themselves to accept any of the Tenders.

Dock Office, Hull, 4th September, 1854.

METROPOLITAN COMMISSION of SEWERS. To ENGINEERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY the 19th day of SEPTEMBER instant, at ELEVEN o'clock am precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the WORKING and KEEPING IN REPAIR, for the space of one year from the 1st day of October next, of TWO CHORKE POWER STEAM ENGINES and PUMPS now erected at the Sewerage Outfall, near the works from the River about 200 yards at Norman-road, Greenwich, the engines and pumps being now at work, and in good working order. The Contractors are to keep the same erected and in repair throughout the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, until the 25th day of March, 1855, between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

No. 1, Greek-street, Soho-square.

Dated this 7th day of September, 1854.

E. H. WOOLRYCH, Secretary.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 19th day of SEPTEMBER inst. at ELEVEN o'clock am. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the REPAIRING the RIVER WALL and EMBANKMENT of the THAMES, and other works in connection therewith, in Green-street, Deptford, in the county of Kent. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, until the 18th instant, between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 8th day of Sept. 1854.

METROPOLITAN COMMISSION of SEWERS To PAVIOURS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 19th day of SEPTEMBER inst. at ELEVEN o'clock am. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the REPAIR of certain ROADWAYS known as Green and Blackwall-lane, situate in Greenwich-marsh, in the county of Kent. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, until the 18th instant, between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the work. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 7th day of Sept. 1854.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS. TO BUILDERS and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice that they will receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, certain intended BRICK SEWERS, as follows, viz.:—

CONTRACT No. 1.—Main Branch Sewer, No. 1, Richmond Park-road, Clapham, to the Main Sewer in Battersea-fields.

CONTRACT No. 2.—Main Branch Sewer, No. 2, Richmond Park-road, Clapham, to the Main Sewer in Battersea-fields.

CONTRACT No. 3.—Main Branch Sewer, No. 3, Richmond Park-road, Clapham, to the Main Sewer in Battersea-fields.

CONTRACT No. 4.—Main Branch Sewer, No. 4, Richmond Park-road, Clapham, to the Main Sewer in Battersea-fields.

Any person or persons desirous to contract for the whole, or either, or all of the before-named sewers, are requested to deliver separate Tenders for each of them, in the form of those of the Lower Division of Hundred, No. 13, Prince-street, on THURSDAY in next, the 28th day of SEPTEMBER inst. at ELEVEN o'clock precisely, when the Committee will meet to determine upon the same.

Plans, sections, and specifications of the works to be done, may be seen at the Offices of the Local Board of Health, No. 13, Prince-street, Bristol, and any further information may be obtained of the Surveyor, Mr. Thomas Hawksley, Westminster, addressed to the Surveyor to the Local Board of Health, Bristol.

The parties tendering will be required to enter into and execute with two sufficient sureties, to be approved of by the Committee, a bond in the penal sum of £1,000 for the due performance of the contract.

The Committee do not bind themselves to accept the lowest or any Tender, but the party whose Tender shall be accepted will be required to enter into the bond and find the sureties before mentioned, within seven days after notice of the acceptance of his Tender, and no Tender will be received after the hour above mentioned.

By order of the Committee,

JAMES HARRIS, Clerk.

Local Board of Health Offices, 13, Prince-street, Bristol.

24th August, 1854.

TO IRONFOUNDERS.

PERSONS desirous of submitting TENDERS for the IRON RAILING, GATES, &c. for enclosing fifteen acres of land as an addition to the Highgate Cemetery, may inspect the plans and specification on application at the Office of the Architects of the Company, Messrs. WEHNERT and ASHDOWN, 42, Charing-cross, on and after the 30th day of SEPTEMBER next. Sealed Tenders to be delivered at the Office of the Company, No. 21, Bridge-street, Blackfriars, on or before the 3rd day of OCTOBER next, endorsed, "Tender for Iron Railing, Gates, &c." The Directors do not bind themselves to accept the lowest or any Tender. Satisfactory sureties will be required for the due performance of the works.

TO ROAD CONTRACTORS AND OTHERS

THE Executive Committee of the Hackney and Central Parish Land Society are prepared to receive TENDERS for MAKING and COMPLETING the ROADS on an Estate of about 40 Acres, for Forty Four Building Sites to be laid out in the Old Ford Lane Farm Estate, on THURSDAY, the 21st inst. between the hours of ELEVEN and THREE. The committee do not bind themselves to accept the lowest or any Tender. 15th Sept 1854.

[For remainder of Contracts see next page.

CONTRACTS.

TO DUST CONTRACTORS

CHELSEA IMPROVEMENT ACT.—The Commissioners for Paving, Lighting, Cleansing, Regulating and Improving the Parish of Chelsea, in the County of Middlesex and Diocese of Rochester, will meet in the Board-room at the Vestry-hall, Manor-street, Chelsea, on TUESDAY, the 30th inst. at ELEVEN o'clock in the forenoon precisely, to receive TENDERS in writing for CONTRACT for a period of one year, from Michaelmas-day next, pursuant to the terms of a draft contract now lying at the Office of the Surveyor to the Commissioners, for COLLECTING and REMOVING the DUST, ASHES, and RUBBISH which are to be the property of the occupiers of the several houses in those parts of the parish specified in the said contract to be paid by the contractor. Twenty per cent on account of the sum offered is to be paid on the completion of the contract, and a further sum to make up a moiety of the sum offered to be paid at the time of signing the contract; and three days at least after the remaining moiety or balance of MARCH next.

Sealed Tenders endorsed "Tender for Dust," and addressed to the Commissioners, at the Office of the Surveyor to the Commissioners, Manor-street, Chelsea, and not delivered at or before the hour of Ten o'clock on the morning of the day of meeting, will be laid before the Commissioners at such meeting.

The Commissioners do not bind themselves to accept the lowest or any Tender.

The Tenders must be signed by the parties tendering, and must specify the names and places of abode of two sufficient sureties for the due performance of the contract, and to be left at the office of the Clerk to the Commissioners, Mr. Edward Kingsland, Manor-street, Chelsea, on or before the 25th inst. at the Commissioners' meeting thereafter to be opened, and the Tenders read. The Tenders must be delivered sealed, and addressed to the Clerk to the Commissioners, and the parties tendering must appear personally in the office, and the Tenders are required to be signed in the presence of the Clerk.

Printed forms of Tenders may be filled up, and obtained at the office aforesaid, where all information may be had.

By order of the Board,

JOSEPH PATTESON, Surveyor to the Commissioners.

Dated this 11th day of September, 1834.

TO ROAD CONTRACTORS AND OTHERS.

THE DIRECTORS of the ECONOMIC FREEHOLD LAND SOCIETY are prepared to receive TENDERS for the formation of the ROADS, DRAINS, POST and RAIL FENCING, and other works, on the Society's Estate at Wood-green, in Tottenham, Middlesex. The plans, sections, drawings, and specification may be inspected at the Offices of the Society's Surveyor, Mr. JOHN WM. MILNES, 2, King William-street, Lawn-house, and forms of Tender obtained on payment of 2s 6d. No Tender will be received after FOUR o'clock precisely on the 27th inst., and any Tender omitted, unless sent in sufficiently early with the form supplied by the surveyor, may only be opened in the party or parties tendering. The Committee of Management appointed for the examination of the Tenders does not bind itself to accept the lowest or any Tender. All Tenders must be addressed to, and further particulars obtained from, Mr. JOHN WILLIAM MILNES, Land Agent and Surveyor, 32, King William-street, City, London.

TO ARCHITECTS, SURVEYORS, AND OTHERS

NOTICE is hereby given, that the Council of the Borough of Grimsby are prepared to receive DESIGNS, PLANS, DRAWINGS, and detailed ESTIMATES for TWO CEMETERY CHAPELS, opposite to each other, together with a LODGE and ENTRANCE-GATES (of not an expensive style) in the intended Burial-Ground at Great Grimsby, and for Fencing with Brick and Iron Palisade, 8 feet high, to meet the requirements of the Cemetery Clauses Act, 1847, of 12 Acres, 1 Rood, and 1 Acre of the Walks in the proposed Cemetery, and will give a premium of 10l. to the person whose design, plans, and estimates shall be approved of. The plans for the buildings must comprise ground plans, sections, and elevations. The population of Grimsby is about 10,000, and the extent of the new cemetery about eight acres. A plan of the ground may be seen, and further information obtained, at the Office of Mr. MOSES HOWARD, Solicitor, in pursuance of the duties devolving upon him as agent to the Corporation Surveyor. The plans, &c. to be sent, with a motto, before NOON on the 29th day of SEPTEMBER instant, and addressed to the Town Clerk, Grimsby, marked "Cemetery." A sealed letter, containing the author's name and address, must accompany each plan, which will be opened after the premium has been awarded. The premium to the person to whom it shall be awarded will belong to that of the Borough.

GEO. BARB, Town Clerk.

Town Clerk's Office, Great Grimsby, September 11, 1834.

BOROUGH of DERBY.—COVERING BROOK COURSES and SEWERAGE WORKS

TENDERS WANTED

The Local Board of Health for Derby are prepared to receive TENDERS for the execution of the following WORKS, which will be let in One Contract, viz.:

Covering over and diverting the PUBLIC SEWERS Two Open Brook Courses in Derby, known as the Littleover Brook and the Bramble Brook, the former being about 1,100 yards and the latter about 1,200 yards in length, and the Contractor to build BRICK and PIPE SEWERS of the Osmaston-road and Street, London-road and Street, Canal-street, Ashbourne-road, Friar-gate, and Morledge-street and street in the said Borough, the whole being about 2,300 yards in length of Pipe Sewers.

Which Sewers are to consist of Glazed Stone-ware Pipes, such materials to be provided by the Board.

Parties tendering must set out what sum they will execute any additional work for, and state in what time they will execute the same, by the new Sewerage Improvement Clauses Act, and in pursuance of a specification and plans to be seen at the Office of the Surveyor to the Board, and which they will execute any additional work that may be necessary, if necessary, connected with the same.

Proposals, specification, and form of Tender, will be for inspection at the Office of the Local Board, Derwent-street, on and after FRIDAY, the 1st of SEPTEMBER, and further information may be obtained on application to the Surveyor, Mr. RICHARD JOHNSON, Derby.

Tenders sealed and endorsed, "Sewerage Works," addressed to the Clerk of the Board, must be received on or before MONDAY, the 15th day of SEPTEMBER inst.

The lowest or any tender will not necessarily be accepted.

By order,

JOSEPH JONES,

Derby, Aug. 23rd, 1834. Clerk to the Board.

TO BUILDERS

PERSONS desirous of CONTRACTING for the whole or any portion of the several WORKS to be done in the ERECTION of THREE CHAPELS and TWO LODGES, with GATES, &c. for the GENERAL CEMETERY, may inspect the plans and specifications from the 25th inst. at SPITALFIELDS Vestry-house, Commercial-street, Spitalfields, Messrs. MYERS and VLEVERS, Glover's-court, Preston-street, and also at the Offices of Mr. THOMAS D. BARRY, Architect, 5, Bedford-street, South, Lincoln's-inn-fields, and at Messrs. MYERS's, Architects and Surveyors.

Tenders sealed and endorsed, "Cemetery Works," addressed to the Clerk of the Board, will be received on or before NOON, the 30th day of OCTOBER next. The Board will not be bound to accept the Lowest, or any Tender whatever.

MILES MYERS, Clerk to the Burial Board.

Preston-street, 14 Aug. 1834.

TO PLASTERERS.—TO BE LET, by CONTRACT, in town, a quantity of PLASTERING, where only good references will be required, with security, if necessary. For particulars, address D. Office of "The Builder."

TO ROAD CONTRACTORS AND OTHERS.

THE Trustees of the St. Pancras Benefit Building Society are open to receive TENDERS for CUTTING and FORMING ROADS, LAYING DRAINS, &c. and BUILDING SEWERS, between the Hampstead-road and Edward-road, Mansfield-street, Hackney.—Plans, Specifications, &c. can be seen at the moment of meeting, on Victoria Tavern, Mansfield-road, Chalk-farm, from MONDAY, the 15th instant to FRIDAY, the 22nd instant inclusive. Tenders, endorsed "Tender for Roads," to be delivered at the above Rooms, on or before the 22nd inst. at EIGHT o'clock in the evening, and no Tender can be received unless the parties tendering or their representative be in attendance on the evening above named. Security to be given for the due performance of the same, or that the Trustees may require, but they do not bind themselves to accept the Lowest or any Tender. By Order,

SAMUEL SPONG, Secretary.

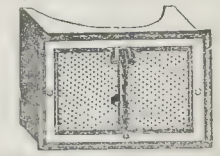
CONTRACTS.

CHESHUNT BURIAL BOARD. — To BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of TWO CHAPELS, ENTRANCE LODGE, HEARSE HOUSE, IRON RAILING, &c. on the new burial ground for this parish; also for forming the Roads, Paths, Drains, Cesspools, &c. may inspect the plans and specifications for the same, at the Office of the Architects Messrs. J. COE and SON, 1, Carpenter's-buildings, London-wall, London, of whom further information may be obtained. Tenders sealed and endorsed, "Burial Ground Tender," to be sent to me before TWELVE o'clock, on MONDAY, the 29th instant. The Board do not bind themselves to accept the lowest or any other Tender.

By order of the Board,

Cheshunt, September 6, 1834. J. DEATH, Clerk.

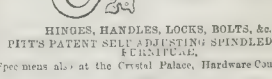
LONDON PERMANENT FREEHOLD LAND SOCIETY.—To Road Contractors and others.—The Directors of the above Society are prepared to receive TENDERS for CONSTRUCTING the ROADS, &c. on the Angel Hill Estate, Sutton, Surrey. The drawings and specification may be seen at the Offices of the Surveyor, Mr. JAMES HARRIS, 29, Lower Belgrave-street, Pimlico, on and after MONDAY, SEPTEMBER 15th, between the hours of TWELVE and FOUR. Tenders are to be sent on or before FOUR o'clock, on MONDAY, SEPTEMBER 29, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. Angel hill Estate." The Directors do not bind themselves to accept the lowest or any Tender.



WILLIAM BOWMAN, Secretary.

Offices, 165, Sloane-street, Chelsea.

HART AND SON,



MANUFACTURING IRONMONGERS,

83, 84, & 85, WEST-STREET, and 91, DRURY-LANE.

HART'S MODEL COTTAGE VENTILATORS.

Also, ARNOTT'S, SHERINGHAM'S, SLIDING, &c.

HINGES, HANDLES, LOCKS, BOLTS, &c.

PITT'S PATENT SELF-ADJUSTING SPINDLED DOOR FURNITURE.

Specimens also at the Crystal Palace, Hardware Court, No. 32.

KIMBERLEY'S

Patent Mortising Machine, 12 inch.

Kimberley's Patent Flooring Cramps, 20s. and 28s. each.

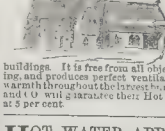
Kimberley's Patent Window Stays and Door Springs.

Kimberley's Patent Gas Stoves, Ovens, and Ranges.

Kimberley's Registered Fancy Brass and Shaw-perman Brass Foundry.

Thousands of all are now in Gardiner.

These well-established Articles to be had from KOLLMAN, LANGTON, and Co., 71, Oxford-street, Goodge's-street, London; or from the Patentee, Birmingham; or to be seen at, &c.



Backs of testimonials and references to any of the above, without the Christian Name in full, will be given.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS on SHORT SIX-inch Grate Furnaces, for ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron Bridge-wharf No. 6, Bankside, London, near the Southwark-iron Bridge.

NEW HOUSES OF PARLIAMENT.—DEFRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 5l. by which a warm bath may be obtained in three minutes. Cooking and cleaning apparatus from 1l. DEFRIE'S celebrated PATENT GAS METERS, upwards of 10,000 in use. Testimonials at the Office, No. 1, Regent-street, or at the Manufactory, New-road, St. Pancras, near Pitfrroy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA. HOT WATER APPARATUS MANUFACTORY, whilst respectfully

soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, hothouses, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of July 14, 1832, which fully bears out the subjoined address of the Rev. H. J. Biggs's delivered at a meeting of the Architectural Society, wherein Mr. Biggs shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the large buildings.—Messrs. JOHN WEEKS and Co. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; Chimes, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

STREET-DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Ryland and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after four-teen hours' exposure to intense heat

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1834.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March, and we all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

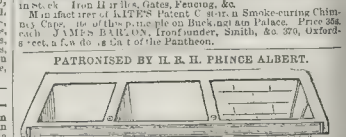
"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

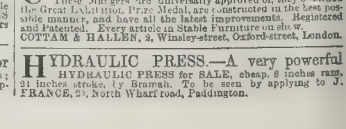
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; a structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of this description to be had. Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in stock. Iron Hurdles, Gates, Fencing, &c.



Manufacturer of BATES' Patent Chimney Smoke-curing Chimney Cans, the use of the principle on Buckingham Palace. Price 25s. each. JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors east of the Pantheon.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE FITTINGS, with FRONT REVOLVING BOLLER, plain or enamelled.

Castings Warehouse, 81, Upper Thames-street.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show.

COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

HYDRAULIC PRESS.—A very powerful HYDRAULIC PRESS for SALE, cheap, 8 inches ram, 21 inches stroke, by Bramah. To be seen by applying to J. FRANCE, 29, North Wharf road, Paddington.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

IOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead being of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than Lead material

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs about	18	oz.	per foot super.

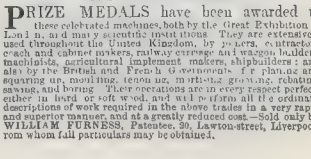
WHEATLEY, KIRK, and CO. have on hand, and ready for delivery, a very large stock of quite new, and the best workmanship, of SLIDING and SCREW-CUTTING LATHES, Double-geared Self-acting Hand Lathes, Drilling, Slotting, Shaping, and Planing Machines, Horizontal and Vertical Steam-engines, &c. &c.

Cross-street Chapels, Manchester

PATENT.

BUILDERS will find that their MORTISING MACHINE, for both Hard and Soft Wood, over invented, combines simplicity with economy of manufacture. It can be had on all WORKING WAYS. Steel-house-lane, Birmingham.



W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Turn-buckles, Patented Shoot Bolts, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

PATENT MORTISING MACHINES.—Builders and Joiners are respectfully solicited before purchasing a machine to inspect France's Patent, to be seen at 90, North Wharf-road, Paddington; they may be had on trial, and if not approved of returned. Price £12 12s. with set of chisels complete. Every description of machine for wood cutting made to order on the most approved principles.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 36, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate operations, at one handling; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery constructed for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders: and also by the British and French Governments for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 30, Lawton-street, Liverpool from whom full particulars may be obtained.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

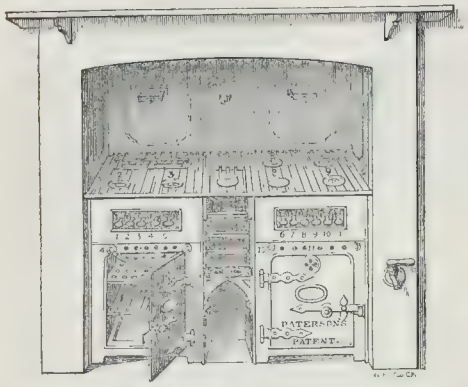
THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.



It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimat Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

PATERSON'S PATENT GAS COOKING APPARATUS.

This apparatus consists of two ovens and gas-burners, on hot plate; an open fire; a flat copp boiler, fixed under the hot-plate over the ovens and back part of the fire; the heat from the ovens a fire acting upon it.

On reference to the plate, it will be seen that roasting can be carried on by the open fire, if required thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

They are used extensively by Mr Mackenzie in his new houses, Victoria-street, Westminster; a are superseding all others, as the following testimonial from Mr. Mackenzie will verify.

"I have used PATERSON'S PATENT GAS COOKING APPARATUS extensively in Victor street, Westminster, and in every case with complete satisfaction to myself and the tenants who occu my houses. They are decidedly better than any I have hitherto had from other makers; and I will and recommend them in every case I can control.

"W. MACKENZIE."

"24th August, 1854."

Testimonial from Colonel Sabine, R.A.

"I have used Mr. PATERSON'S PATENT GAS COOKING APPARATUS for the last s months, and am well satisfied with its performance. My servants were previously accustomed to cook with coal only; but they have found this range so simple and so well contrived as to present no difficulty and they now find it much more convenient and agreeable than any thing they had previously used.

"13, Ashley-place, 29th August, 1854."

"EDWARD SABINE."

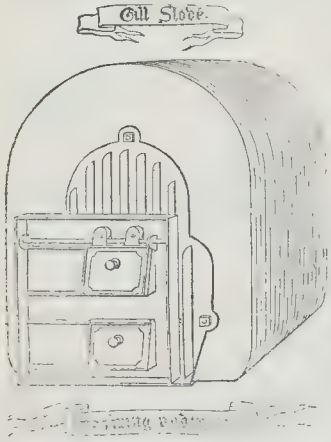
They may be seen by applying to the Patentee,

A. PATERSON, 53, VICTORIA-STREET, WESTMINSTER;

of whom LICENSES may be had for making them.

THEY ARE MANUFACTURED BY

T. WALLER and CO. Ratcliff Ironworks, Rose-lane, Ratcliff,



NEAR THE STEPNEY RAILWAY STATION,

Where they may be seen in operation, and where prospectuses and every information concerning th may be obtained.

Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT-WATER APPARATUS, METAL CONSERVATORIES, &c.

N B. The Trade supplied with Iron Sash Bars, bent to any shape or design.

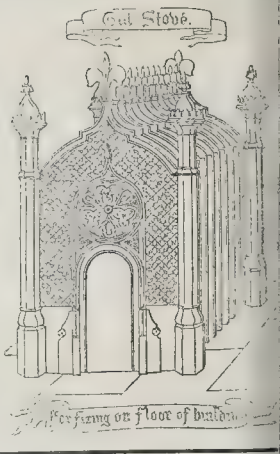
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

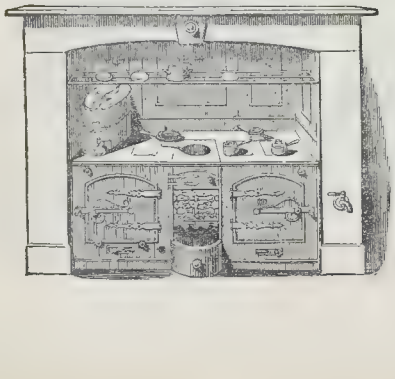
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE PLACE, SHEFFIELD,



confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool, North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London.

CUNDY'S PATENT STOVE. — The o
Pedestal Stove which gained a prize medal (class 4 b, at Great Exhibition in 1851, especially adapted for warming, great economy, churches, chapels, school, entrance halls, libraries, can be purchased only at the manufactory of CUN and SONS, Iron Founders, &c. 16, Great Queen-street, Long where a large stock is always ready for immediate delivery.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUL, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOLLESVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 600 lbs of water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Dockhead; and several maltsters, millers, and manufacturers in London and country. Apply, per post, to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

STEAM POWER TO BE LET.—Apply at the Premises, 5, John's-place, Holland-street, Southwark.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 3s. 6d. each, according to size.

CASE-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O G Gutters, Bath-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COUMS with caps and bases, and every kind of builders' castings, in stock, at LYNCH-WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Effluvia. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker

THE SMOKE PREVENTION COMPANY, 33, Charing-cross.—PRIDEAUX'S SELF-CLOSING VALVES, applicable to every description of furnace. Extensive experience has shown the action of these valves to be so perfect as to leave nothing to be desired. Not only do they entirely prevent smoke, but they do so with benefit to the action of the furnace in every point of view, boiling coppers, heated ovens, or getting up steam quicker, and saving from 10 to 15 per cent. of fuel. In no instance have the Company ever received a complaint of having impaired the action of a furnace.

THE PREVENTION of SMOKE, and improved COMBUSTION of FUEL in FURNACES.—WOODCOCK'S PATENTS, inventions which accomplish these great desiderata completely, and more inexpensively an l easily than any other method, at the same time greatly economising the fuel, and facilitating the generation of steam.—For particulars, address Mr. WOODCOCK, Earl's Court Brewery, Old Brompton, where these furnaces may be seen at work any TUESDAY, THURSDAY, or SATURDAY, between the hours of TEN a.m. and FOUR p.m.

SMOKE PREVENTION. — (OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.) NOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace builders, and others.

MUTUAL LIFE ASSURANCE. Important to all who desire to make provision for their families.—The PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION and BENEVOLENT FUND. Established 1840.

TRUSTEES.
Thomas Baring, esq. M.P. | W. G. Prescott, esq.
Thomson Hankey, jun. esq. M.P. | Baron L. N. de Rothschild, M.P.
TREASURER OF THE BENEVOLENT FUND—John Abel Smith, Esq. M.P.

The Association embraces life assurance on the mutual principle in all its branches, and offers to all classes of society peculiar advantages. Prospectuses may be had at the Office of the Association. By order of the Board,
WILLIAM THOMAS LINFORD, Secretary.
15, Moorgate-street, August 2, 1854.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)
MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

GEO. ROUTLEDGE and CO. Farringdon-street; and 18, K. SPENCER, 314, High Holborn.

The Builder.

SATURDAY, SEPTEMBER 16, 1854.

THE part of the Crystal Palace at Sydenham devoted to the Renaissance style, comprises the main court—occupying, in frontage, 72 feet, and 48 feet in the other direction,—the Elizabethan Court, 24 feet by 48 feet, and the adjoining portion of the long gallery on the garden side, 96 feet by 24 feet. But in addition to what there is here, some important works of the same style may be found in what is called the Gallery of Christian Art, adjoining the central transept, as well as in front of the courts next the nave. We referred last week to some of the objects of interest in the northern galleries, and may state, since few visitors seem to find their way to these, that here there is a very extensive collection of photographs of buildings of the several periods illustrated in the courts below, besides a small but interesting series of casts of woodwork, general metal work, armour, vases, seals, and other minor objects. The photographs would be more useful if attention were paid to their arrangement, and particularly to keeping the glasses clean.

The external façade of the principal Renaissance Court is formed by an arcade from the Hôtel Bourgtheroulde, at Rouen (the inner side of which was shown in the view in a former number), filled in with ornaments from various sources, and crowned by a frieze from the Ospedale dei Poveri, at Pistoia, in Tuscany. The frieze, which extends also over the façade of the Elizabethan Court, is, perhaps, injurious to the effect of the architecture below it; but there is sufficient interest in works of the same class, to call for further remarks shortly.

The arcade in the original is supposed to have been erected subsequent to the date 1520. Though strictly Renaissance in character, it displays many important features distinct from the architecture of the same *style* in Italy, and of course it is especially different from the Italian architecture of the same late date. The Hotel Bourgtheroulde is, indeed, in the main, Gothic; and here we have a Gothic character in ornamented mouldings, and in the Burgundian, or three-centred debased Gothic arches. What would be the reveal of the opening is enriched with the peculiar arrangement of forms compounded of column, vase, and candelabrum, with occasional sculptured figures, which was one of the chief characteristics of the Renaissance as distinguished from the Cinquecento, and of which the modern French artists have made so much use. This character of design, free from the defects of composition, which, from the manner in which it grew up, were so likely to arise, may be seen to the best advantage in the shaft of the recess window of the Certosa at Pavia. There is very little that resembles it in any other style of architecture,—but the baluster shaft of the belfry windows of our own Saxon style is an approach. In furniture, where the ordinary forms of columns are generally out of place, much may be gained in the way of suggestion from the form of shaft in question. In the last notice of the Renaissance style, we expressed dissent from the opinion that the ordinary form of the Italian baluster was *copied* from Roman remains. It was probably no more than a modification of the *candelabrum*-like shaft, itself a pleasing adaptation of the Roman candelabra and vases—being reduced in size and adapted for repetition as the enclosure to a staircase or balcony. The two-light window with central shaft was commonly used by Bramante. It was clearly a legacy from the Romanesque.

Some of the panels in this façade are filled in with very beautiful ornament, chiefly of the best *Italian* Renaissance character. The effect here of the gilding is singularly good,—comparing the system adopted, namely, that of gilding the ground and leaving the ornament white, with the erroneous method followed in other courts, where in too many cases, neither the ground nor the entire ornament is gilt, the result being confusion in the effect of the form. The relievo along the base of the arcade, however, is gilt in the objectionable manner referred to. If poor as a work of art, the gilding does not improve such a production: if merely interesting (from its representing the meeting of Henry VIII. and Francis I.), we are persuaded that the general observer would discover just as much of its details as he can now.

The three centre-arches of the arcade lead into the loggia. On the vaulted ceiling are painted, boys holding scrolls with the names of celebrated Renaissance artists. In the lunettes are the portraits of monarchs and other celebrated personages, male and female, under whose auspices the chief monuments of Renaissance art were produced. In the interior of the Court there is some good decorative painting, and on the upper frieze, or attic, is an extensive series of portraits, which, if not always accurate likenesses of the artists whose names are appended, have the merit of bringing the names to recollection. In the general decoration of the arcade, internally, colour takes the place of gilding.

In the Court generally, it must be regretted that there could be no adherence to chronological order, or to other system in arrangement. It would have helped many to understand much that in the case of this style may appear anomalous. However, the difficulties in observing strict chronology would have been insurmountable. But the Handbooks might have supplied the deficiency, by more frequent reference to the examples, in the course of the historic account. As the arrangement is, the *grouping* of the objects is well managed. Opposite the Loggia, we have the colossal bronze of the Nymph of Fontainebleau, by Cellini, placed under an arch, and supported by the Caryatides of Jean Goujon, somewhat after the existing disposition of these works in the Louvre. The doorway beneath leads into the gallery, the centre compartment of which is arranged with square piers on pedestals, panelled and decorated like the pilasters of the principal façade, and supporting a groined ceiling painted like that by Perugino in the Sala di Cambio, at Perugia. At the south end of the Court are the bronze doors of the Baptistry at Florence, with doorways from Genoa, and wooden doors from St. Maclou, at Rouen. At the north end is the recess window from the Certosa, from which building the greater number (perhaps too many) of the objects in the east wall, and in the gallery are taken. At the north end, in positions corresponding with those opposite, are other doorways from Genoa, and doors from Rouen. Of those beautiful examples of Renaissance ornament found in the pilasters of the tomb of Louis XII. at St. Denis, good use has been made; whilst the tomb of Cardinal d'Amboise, at Rouen, and the remains of the ornament of the Château de Gaillon, and the Château d'Anet, preserved in the Ecole des Beaux Arts, and the Louvre, seem not to have been much attended to. In the two last-named buildings, as in many other cases, early destruction seems to have resulted as much from very hopelessness of preserving so much magnificence, as from revolutionary violence. The best specimens of these ornamental details are to be found at Marlborough House. Of those at the Ecole des Beaux Arts, some drawings were engraved in a former volume of the *Builder*.

In Renaissance sculpture, the collection at Sydenham is most valuable, as furnishing us with copies of works previously little known in England, and the peculiar merits of which have perhaps not since been equalled. Such are the St. George, by Donatello, in front of the court, and the figure of David within; but allusion is here more especially made to the works, where a peculiar combination of very low relief with undercutting, is observed. We have there what must be considered a distinct vehicle of expression, not wholly free from the admixture of the pictorial, though greatly different from some of the works in which the use of perspective is so striking a feature. It is curious to observe these subordinate, but distinct methods of treatment in sculpture, where modern theory would uphold the simplest forms of high, middle, and low relief, each respectively, and the wonderful beauty which is still the result of the erratic and experimental course taken by the early artists. But it does not follow that we are to confound the capabilities of painting and sculpture. There is a particular end to be attained by art, distinct from that of the imitation of nature, and that end is best served by recognising the limits as well as the advantages of each particular vehicle. To pursue any other course, is not only to sacrifice the opportunity of *showing* the expression of the artist's mind: it interferes with the possibility of the exercise itself. All nations, however, seem to fall at some time or other into this mistake; the monuments of Westminster Abbey display ships foreshortened in perspective, and sculptured clouds relieved on a blue marble sky. The erroneous step once made towards the mistake of imitation as *the object* in art, and there is no halting before you get to the mimicry of coloured wax-work.

It may seem the excess of criticism to class works such as the head of St. John, by Donatello, and several by Luca della Robbia, in this court, works of surpassing merit and exquisite sweetness of expression, with productions of the low character referred to, or even with the exaggerated style of the "Trofeo," from the Certosa. But the truth is, that the very peculiarity which perhaps constitutes the merit of the one class of works, becomes the defect in the other,—showing that it may be granted to an artist of high ability, and acquainted with rules, even to deviate from them; but, that the same path, without the knowledge of the danger, leads only to destruction as regards art. The connection of the two classes of works, and the pictorial intention of the later works, is shown by the extraordinary flatness of heads, which being in full relief, might have been expected to have the natural proportions, as in isolated figures. Some figures are even so flat, as to look like pieces of card, cut and pasted on.

The principal works from the Certosa, besides the beautiful window before referred to, are a portion of the monument of Gian Galeazzo Visconti; one of the interior return sides, with pilasters, from the principal entrance, enriched with intertwined vine branches and elaborate carving; a composition from the altar of the first Chapter House, and another from one piscina and the "trofeo," or upper portion, of another. The latter work is that which gives the most complete attempt at a picture in stone, the lines which should be at right angles to the spectator running in the direction of a vanishing point, as they do in the one more considerable attempt in this peculiar manner—the scene of Palladio's Theatre at Vincenza. For scenery, the plan might again be worth trying. In the first-mentioned monument, the ornament of the pilasters is of the kind especially deprecated by a certain writer. The representations of

armour and weapons, and of horse furniture and implements of the stable, have great antiquarian interest. The defect of the treatment considered in relation to ornament, seems to us the entire absence of uniformity of scale—too common in Renaissance ornaments even in scroll—by the Lombardi, as we find from the examples in this court—but which in this case is quite ludicrous.

We have, however, not named the whole of the works from the Certosa; for, on the walls of the gallery, are representations of the arches of the large and the small cloisters. They should be examined in order to apprehend clearly the diverse character of the architecture of the Renaissance. Though probably coeval with the works of Brunelleschi, they have an appearance distinct from either the classical or the Romanesque element in the style of that architect. The originals are executed in terra-cotta.

The modelling of the sculpture from the Certosa, by Pierotti, of Milan, merits all the praise given to it. But it seems never to have struck those who adopted methods such as we have had reason to regret in other cases, that paint and "sanding," upon minute and delicately-chiselled surfaces, were not to be applied without loss of the effect. The naked plaster conveyed some conception of the extraordinary beauty and workmanship of the originals: now, the works look like stone, indeed; but paint and very few grains of sand in the hollows of drapery, and wrinkles of the countenance make just the loss of what it was desired to show. It is a mistake to suppose that the artist alone is affected by these minute differences: they modify the impression produced on all,—though the artist only may detect the fact of the loss in effect, and the *rationale* of it.

We cannot help thinking that the Ghiberti gates, wonderful as they are, have been somewhat overrated. Michelangelo had that high virtue in an artist—the readiness to appreciate what was excellent in the work of another. But, when we read that "the external border is formed by a wonderful composition of foliage and natural objects, which stands forth as the most completely beautiful and finely-executed design of modern or ancient times," we are constrained—not positively to contradict what has always received such high praise for the great beauty which it unquestionably has,—but to ask, whether we have not heard much of late, against the naturalistic treatment which seems to prevail in these works, or whether the carvings in and about a certain metropolitan cathedral, are not worthy of being compared with this beautiful work by Ghiberti. The sculptor himself says:—"I have done my best in all respects to imitate nature, so far as was in my power." The question, as we understand it, is, whether an artist does right—not in studying from nature—that is in *imitating*, in the only sense in which the term is used by Reynolds and some other writers,—or, whether the sole purpose of art is a kind of mimicry—such as rightly enough is held to detract from the merits of Grinling Gibbons.

The use of perspective by the sculptor is, we have held, one evidence of the misconception of the artist as to his true office, and we can by no means believe with the writers of the Handbook, that the work is one which no artist of modern times has shown himself capable of approaching. We need withdraw nothing of our admiration of this work of Ghiberti: we may consider the sculptor a man at that time of extraordinary genius: but the countrymen of Flaxman are worth but little, if the teaching of this very work has not borne interest, and if so many years have passed over the world in vain.

The doors from St. Maclou at Rouen, attributed to Jean Goujon, are good specimens of French Renaissance, displaying a remarkable number of carved figures, with the larger prominence of strap work as compared with the other elements of the Renaissance, characteristic of the French version of the style. One of the knockers is a well-known and good example. The peculiar character of the French sculpture is well explained, and there are several examples in the gallery. Here we have the Graces by Germain Pilon, and four wooden statues by the same artist. Here also is the bronze effigy of Marino da Soccino, by Vecchietta of Sienna, a work valuable, we think, as displaying the true principles of sculpture in bronze. The peculiarities of the material, whether marble or bronze, should always be regarded. In some modern works, we find a massiveness and solidity of treatment which are appropriate to marble, rather than to that which has not the same difficulties of stability to contend with. The work in bronze should manifest a reason for the choice of that material in preference to marble or stone, and the same principles should be recognised in other cases. — The centre compartment of the gallery, we should say, is a representation of the ceiling by Perugino, before mentioned. It is a work of great interest in the early history of art. The decorations of the adjoining beams are from the ceiling of the library at Sienna, the panels being inscribed with the names of early Italian decorative artists.

Reverting to the history of Renaissance sculpture, none of the artists would deserve a longer notice than Luca della Robbia, the sculptor of the frieze, called "The Singers," and of many other beautiful works in the collection. The original of the frieze over the principal façade is executed in the coloured porcelain invented by the same artist, though the work itself seems to have been by his nephews. The colours of the original are not copied here, but the ground is blue and the figures are white. The remarks in the Handbook, as to the injury to the effect by colour and by varnish or glaze in the original, are judicious. The use of colour seems to touch upon the question of coloured statuary. As regards glaze, it is curious that the existence of the original awkward defect of it, in the revived manufacture by Messrs. Minton, however, has not been referred to, though in the frieze in the booking-office of the Great Western Railway Station at Paddington, that defect tends to obscure what is really a tasteful design. The durability of the porcelain glaze is indeed the thing wanted for the preservation of most kinds of works of art; but the reflection from it is most objectionable in sculpture and ornament. During the extensive use of terra-cotta by the Italians, preservation was necessarily a great object; and this being attained by Luca della Robbia, we can only suppose that the *amour propre* of the inventor blinded the perception of Della Robbia, the artist. The reflection, and consequent distortion of designed light and shade, is, it seems to us, very different from any that could exist in ordinary marble figures, or even those of ivory, or the encaustic application supposed by some to have been made to Greek sculpture. Anything of this kind supplementary to the form and the light and shade, interferes with, and therefore diminishes the effect intended by the artist; and that is the reason why we so strongly object to the shining coat of oil paint, used as a preservative for the casts in the Gothic courts. The difficulty is not without existence, even as to decorations in ordinary houses.

In considering the relative questions of chronology and style, it is well to recollect that this work, placed with the Renaissance works, dates about 1528, that is to say, in the time of the Cinquecentisti, and eight years *after* the death of Raffaelle. Much earlier, however, or about 1445, Della Robbia had executed the remarkably fine frieze, the Singers, in the organ-loft of the Cathedral at Florence. At this period, when the finest examples of antique art had scarcely been brought to light, we find the principles of the antique, as opposed to the exaggerated use of perspective by contemporary artists, prevailing throughout, but combined with accurate representation of nature. The original is too high from the ground—50 feet; yet Vasari recognises minute details of expression, and Cicognara even thinks that you might from these, almost point out the nature of the different voices. The present cast, placed at the upper part of the court, and therefore much nearer to the eye than the original, is even now somewhat too far from the spectator on a dark day. The only supposition, then, consistent with Vasari, is that of a difference in the light and climate of the two countries, greater even than what has been generally supposed; and this difference should be taken into account in judging of the works of art in Italy from drawings and casts. In the case of works in bronze, the difference is very remarkable.

Parallel with the observations in the last article, as to comparative merits of early and late art, it may be set down, that the early works of all artists eminent at some period of their lives, have merits which they hardly ever afterwards succeed in reproducing. But in the case of Della Robbia, there were other reasons which, sad to say, help to make such differences more manifest. The artist then, as now, had to live by his art. Till the artist can infuse into the spectator a power of perception of delicate shades of beauty corresponding with his own—a result which from the very nature of art-practice can never, and even should not, happen—he must look for his chief reward in his own conscientious self-approval—and that, under all conditions of public taste. Except with reference to early excesses—which we hope are uncommon, as they are inconsistent with the calling of the true artist—men's wants increase rather than diminish with age, and this should be an additional inducement to extraordinary efforts during that time, "which once lost can never be regained." Della Robbia, in his work of "The Singers," had done something for art. It was inevitable that the artist should not be appreciated in manner commensurate with his labour. The frieze procured a commission for the door of the sacristy in bronze; but the result of his devotion of long time and excessive labour to these, at small gains, was the necessity of leaving the working of marble and bronze, for the commoner material clay—the process of moulding and finishing which, known by his name in Della Robbia ware, he invented. It has also been called Raffaelle ware, because Raffaelle made designs for it. In this change, it ought not to be necessary for us to say there was nothing inconsistent, either with the true artist or the mere sculptor. It has been said, that whilst in its higher attributes, art is irrespective of vehicle, it *is* the business of the artist-painter to paint, and of the sculptor to fashion the bronze or marble. In our opinion, however, the material which is easier in manipulation should be even preferred to another to which it may not be greatly inferior in its perfect form, in art-expression. Terra-cotta has been hitherto inferior, from the difficulties as to burning; and though a great advance has been made, as in the figure of Australia, on the principal terrace at Sydenham, noticed by us some time back, much has yet to be done; and we should regret to see comparative facility leading to production of inferior art. Whilst urging this, what we have to say is, that there should be no *prejudice* against such materials amongst the first sculptors. Doubtless, a superior material for moulding, with durable but dead surface, and colourless, will be discovered; and we are desirous to know what Dr. Emil Braun is now doing, whose process for cast marble was noticed in these pages. At the same time, a preservative substance is wanted applicable in the case of the surfaces of different kinds of materials, absorbed by the material, and not coating it, and with far greater durability than that of paint, yet without oiliness or glaze.

A discovery of the kind referred to would multiply the value of existing works, would carry the beneficial influences of art where they are now unknown, and would, we doubt not, raise the standard of art-excellence.

In referring to the frieze first mentioned, it is interesting to remark, as significant of the appreciation of art amongst the Italians, that this noble work is placed in no other edifice than an "Hospital of the *Poor*."

Of German Renaissance art, there are some few examples,—the best being a copy of the wooden inclosure to a door in the Hôtel de Ville, at Oudenarde, by Paul Van der Schelden, and having the date 1530. Similar inclosures were adopted in our own Elizabethan architecture. It is to be regretted that there are no adequate illustrations of the *Plateresco* of Spain, one of the most remarkable and prolific of the versions of the Renaissance. Amongst the figures in the centre of the court are some of the best of the works of Donatello, besides some of the figures from Inspruck, interesting rather for costume than as works of high art. Between them and works of the Italian Renaissance sculptors, the contrast could hardly be greater. The

wells from the ducal Palace at Venice—it is necessary to notice—have been modified in appearance by the introduction of a group of objects in the centre of each (as, indeed, is the case with many other specimens). They are, we suppose, arranged to serve as the basins of fountains, whenever the long expected supply of water for the Crystal Palace is obtained. Amongst the objects near the central transept is a fine equestrian statue by Donatello, and Torregiano's monument of Henry VII. and his queen, better seen than at Westminster.

Of the Elizabethan Court little need be said, for there are few objects in it new to our readers. The principal works are the monuments of Queen Elizabeth, and Mary Queen of Scots. The architectural reproduction has, however, been managed, so as to form a capital illustration of the distinctive features of the English Renaissance, in which the cartouch and strap work, conventional foliage, and modified forms of the orders, with ornaments of prismatic or jewelled character, were adopted,—the more striking features of the Renaissance in Italy being rejected. The English Renaissance is, therefore, more akin to that of France and the Netherlands than to that of Italy. Nevertheless, there was during the time of Elizabeth, great love of Italian literature; and, doubtless, the forms of Italian architecture were sought in some measure to be produced in the long arcaded terraces and balustrades, which are the best features of the English style. In the time of James I. the cartouch work became very prominent, until at length Inigo Jones, who had at first practised in the existing style, brought from Italy the true Italian forms, and the accumulated materials handed down to the time of his great example, the architect Palladio.

ANCIENT STONE CROSS AT DIEPPE.

MOST of those who run over to France for an entire change at this season of the year are, upon landing, either too ill with the sea voyage, or too anxious about their baggage, passports, or the possibility of catching the first train to Paris, or elsewhere, to spare an hour or two in looking about them where they are. This is probably the reason why so few persons see an old cross on the south side of the Cathedral at Dieppe. In order that they may do so at their ease, we have engraved a sketch of it for our present number. The cathedral has several interesting points, and the town is quaint and picturesque.

ANCIENT CROSS, DIEPPE.

ON THE PROGRESSIVE CHANGES IN ORNAMENT IN THE SUCCESSIVE STYLES OF MEDIÆVAL ARCHITECTURE.*

CONTINUING my observations, we now come to what may be emphatically called THE *transition—the* GREAT *transition* one may almost say—from *darkness to light*.

The Romanesque was indeed a noble style—grand and impressive in the extreme. It was, too, a style almost perfect in itself. It was that in which the great principle of Greek and Egyptian architecture was first thrown entirely off, and that of the *arch* first assumed its *full* and *undisputed* sway; but it was the principle of the *round* arch—a form out of harmony with those lofty and aspiring proportions which seem so aptly symbolical of *Christian* architecture. Throughout the whole period of Romanesque architecture the principle of HEIGHT seemed *striving* to develope itself, but was checked in its strivings by the *unalterable* semicircle. Add height to piers—doorways, windows, walls—still the same low figure must crown them, and destroy by its obtuseness the whole harmony of the composition. A lofty pillar was a beautiful object, but if bearing the dull semicircle, looked even less pleasing than had the stunted pillars of earlier days. All harmony must be lost, if the upward strivings of the vertical lines could not find some accordant accompaniment in the arch they were to bear. The architecture of Europe yearned for the invention of a lofty arch to harmonize with its heightened piers.

It matters little *where* it was that she found what her very soul longed for. It concerns us little whether she saw it in her own intersecting arcades,—whether the thought occurred from the necessities of her vaulting,—whether the Norman learned it from the Saracen in Sicily, —whether the soldiers of the Cross found the solution of the enigma in the cities of the East,—or whether the Freemasons discovered it in the first proposition of the "good clerk Euclid," whom they claimed as the founder of their order. Certain it is that the long desired form appeared about the middle of the twelfth century—at once solving the question, and showing how the height of the *arch* could be proportioned to that of its supporting piers, and consequently, how *any degree* of loftiness might be given to the proportions without the loss of harmony.

This discovery was the very *elixir vitæ* of architecture. All which preceded it was but a mass of dry bones, but from this moment they became invested with life, and capable of unlimited growth and development. This period is, then, *indeed, The Transition.* For such a result, we may well be content that the enervated arts of Rome, in her later days, had been broken to pieces and had become as dust. The transitional period is one of deep and mighty interest, and its works do not disappoint our expectations.

The moment the pointed arch is acknowledged as a principle, and before it had supplanted its unaspiring predecessor, we find a series of beauties to invest the rude architecture which it was about to supplant. The workmanship at once becomes *refined, highly finished,* and *precise,* —the proportions well studied, and elegant,—the decorations pure and effective, and the carved foliage artistic and beautiful. A new feeling seems to pervade the entire art. As yet, however, the details are founded in great measure upon those of the preceding style, though so refined as to present quite an altered aspect. The chevron moulding, for instance, remains, but is transformed into a most elegant decoration, exhibiting varieties truly marvellous. The mouldings, from being simple and heavy, become beautifully relieved, and carefully studied in their sections. The capitals, instead of being convex and heavy in their form, become concave and elegant, showing, not unfrequently, a return to the idea of the Corinthian capital, but with *infinite* variety of design. Even the cushion capital assumes an infinity of forms, each partaking of the elegance and artistic feeling displayed now in every feature.

The figure sculpture also is greatly improved, and strives to rid itself of its Byzantine stiffness, not certainly attaining academic correctness, yet often possessing considerable beauty and vivacity in its smaller specimens, and a great and severe grandeur in the larger figures.

The country which gave birth to the Pointed

* See page 471.

style has been as much a subject of dispute as has the source from which the pointed arch was derived.

At one time *England* laid claim to its sole invention; then Germany indignantly put in her claim, and still persists in calling it the old German style.

Few, however, will now, I think, hesitate to award the palm to *France*, though in our own country it arose so early and evinced so many characteristics peculiarly our own, that it would almost appear as if the thought had occurred in both countries at once.

If, indeed, the Romanesque of both countries had been equally striving towards this consummation—*if* the warriors of both had seen the pointed arch while fighting side by side the battles of the Cross, it is no wonder if both at the same moment seized the idea which was to give life and substance to their aspirations.

Germany certainly hung back, and continued the use of her refined Romanesque till in France and England the Pointed style, in its earlier stage at least, was fully developed. The same was the case in Italy. England, intimately connected with France at that time, having an aristocracy almost common to both—a clergy closely united and possessions most singularly intermixed, advanced with her hand in hand, while Germany, ruling Italy politically while in art ruled by her, lingered with her for a moment before she ventured to throw aside the architecture to which both had a common claim and which both had taken so noble a part in perfecting.

Among the purely English examples of the transitional style, the remains of the abbey of Glastonbury claim the highest place. They retain the round arch in conjunction with the pointed, and the arches retain the Norman zigzag; but it is impossible to conceive of anything more refined and more perfect than the manner in which every part is treated. The exquisite carving of its foliage appears to have been adopted as a type through an extensive district, not only of the west of England, but to the farthest extremity of South Wales, including the cathedrals of St. David's and Llandaff.

In the south we have a noble specimen of the style at Chichester, a cathedral offering a very fine study of early moulding; in many respects finer than any which succeeded it.

In the north we have a peculiar variety of the style of extreme nobleness and beauty.

It is probable that the earliest type of this district was given by the rebuilding of the choir of the cathedral of York. Of this, only the crypt now remains. It is hardly removed from Romanesque, excepting in the extreme precision and care with which every detail is studied and executed. It is, indeed, a *perfect* specimen of early masonry.
